Non-Technical Summary

ES 1 AspinallVerdi have been reappointed by Hastings Borough Council to update the Local Plan Viability Assessment (LPVA) in support of the emerging Local Plan. The study was originally commissioned in 2020 and has been through various iterations as emerging policy requirements have been refined and consultations have been completed, resulting in a draft version of the LPVA being submitted to the Council in Summer 2024. The purpose of this updated assessment is to determine whether the latest policy requirements set out in the Pre-Submission Version (Regulation 19) Draft Local Plan are viable and deliverable.

ES 2 The assessment will also identify whether, in conjunction with the expanded policy requirements, there is scope to introduce a Community Infrastructure Levy (CIL) for different types of development across Hastings.

ES 3 Our viability assessment has been undertaken in accordance with the following:

- National Planning Policy Framework (NPPF)
- Planning Practice Guidance (PPG)
- RICS Financial Viability in Planning: Conduct and Reporting, Professional Standard, 1st Edition, May 2019
- RICS, Assessing viability in planning under the National Planning Policy Framework 2019 for England, Professional Standard, 1st Edition, March 2021

ES 4 This non-technical summary provides an overview of the approach adopted and the emerging results as of September 2026. Please note, the outcomes shared in this summary may be subject to change after further consultation is completed.

Local Plan Examinations: Letter to the Interim Chief Executive of PINS

ES 5 On 15th July 2026, Matthew Pennycook MP wrote to the Interim Chief Executive of the Planning Inspectorate to emphasise the importance of taking an appropriately pragmatic and proportionate approach in respect of deliverability and viability when examining local plans.

ES 6 The letter recognises the uncertainty that can arise from economic volatility which may change over the longer-term delivery of a plan. As such, it is encouraged that allocations are assessed against their prospects of delivery over the plan period as a whole, rather than solely against current market conditions. Inspectors should also distinguish between uncertainty arising from prevailing market conditions and evidence indicating fundamental obstacles to delivery.

ES 7 Whilst this is not a direct instruction to practitioners undertaking Local Plan Viability Assessments, we have nonetheless been mindful of how our assessment can align with the approach being encouraged in the Minister's letter.

Viability Assessment Principles

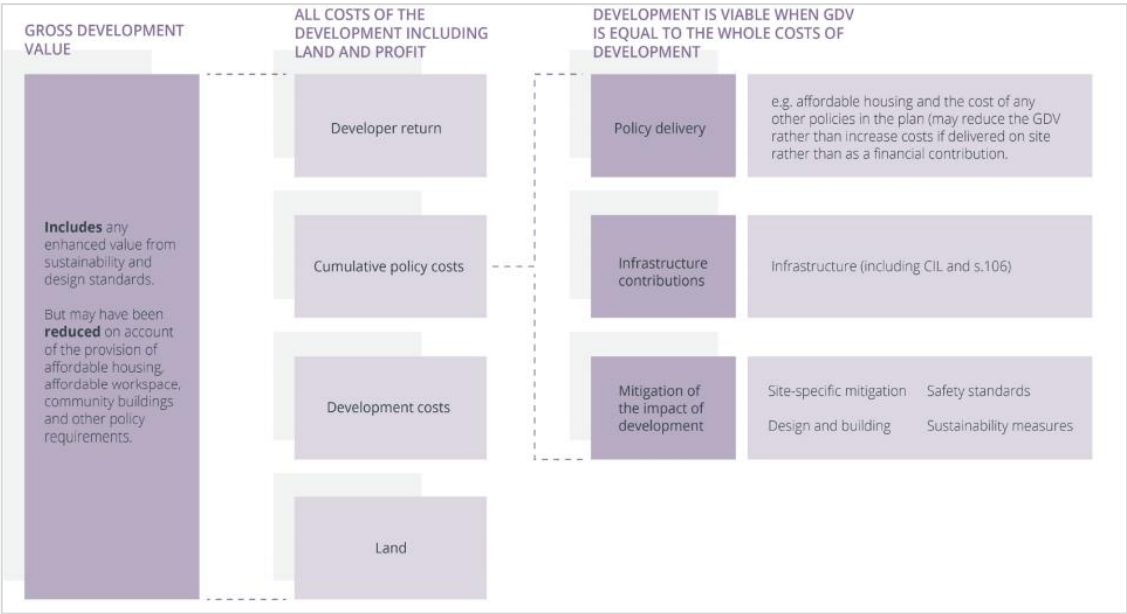
ES 8 Paragraph 010 of the Planning Practice Guidance sets out the principles of viability assessment in planning, as follows:

> *'Viability assessment is a process of assessing whether a site is financially viable, by looking at whether the value generated by a development is more than the cost of developing it. This includes looking at the key elements of gross development value, costs, land value, landowner premium, and developer return.'*

ES 9 This assessment therefore considers whether the costs of delivering new development in Hastings, including those associated with the updated policy requirements in the Local Plan and potential CIL obligations, are offset by the values generated upon completion. In turn, recommendations can be made on the extent of policy requirements sought from new development in Hastings.

ES 10 We have run a series of development appraisals using a bespoke Microsoft Excel model. The appraisals consider the expected costs and values associated with delivering different types of development across Hastings, including residential, employment and commercial uses. Figure ES 1 summarises the key components within the MS Excel Model that are required to assess viability.

Figure ES1 - Viability Assessment Components



Source: RICS, March 2021.

ES 11 The model calculates the viability surplus (where values meet or exceed the costs) or deficit (where costs exceed the values) for each development scenario. Each appraisal is also supported by a series of sensitivity tables demonstrating how the outcomes change in response to adjustments to the cost and value inputs, or levels of policy contributions (e.g. affordable housing / S106 / CIL).

ES 12 The cost and value inputs included within the appraisals have been informed by a robust review of market evidence, as well as industry-standard assumptions and our experience of undertaking site-specific viability assessments at the application stage. The assumptions have also been presented to stakeholders at a workshop to invite feedback and evidence to be submitted by the industry. We summarise the approaches taken for the key inputs below:

Gross Development Value (GDV)

ES 13 The residential and commercial values adopted within our appraisals are based on a detailed analysis of the local property markets in Hastings and supported by separate market reports. The market reports draw on published data from the Land Registry, marketing portals (Rightmove, Zoopla), CoStar (commercial property database) and market commentaries, as well as consultations with locally operating estate agents. This data has then been used to inform the value assumptions for the development typologies assumed in the testing, including market sale housing, build-to-rent, older persons housing, retail, office and employment uses.

ES 14 The GDV component also includes the values associated with the provision of on-site affordable housing, as sought by the Pre-Submission Version (Regulation 19) Draft Local Plan. The values applied to the affordable housing within each appraisal are based on the tenures sought by the Council and have been discounted accordingly.

Development Costs

ES 15 The base construction costs have been informed by data published on the RICS Building Cost Information Service[1] (BCIS) and by reference to other schemes being delivered across the Borough. Additional percentage-based allowances have then been made to reflect the costs of external works, professional fees and contingencies, along with a generic clearance / remediation cost for brownfield sites.

ES 16 Other non-construction related costs within the appraisals include disposal costs (marketing, agency & legal), development finance, planning fees (including surveys & reports), empty property costs, Building Safety Levy, land acquisition fees (SDLT, agency & legal) and a benchmark land value (discussed further below).

Cumulative Policy Costs

ES 17 We have reviewed the policy requirements proposed in the Pre-Submission Version (Regulation 19) Draft Local Plan. The primary policy requirements that will have a direct cost to development have been reflected in the appraisals, including the following:

- Strategic Policy 5: Meeting the Challenge of Climate Change
- Strategic Policy 8: Conserving and Enhancing the Natural Environment
- Strategic Policy 10: Transport Infrastructure
- Strategic Policy 13: Development Viability

[1] As recommended by the PPG and RICS Professional Standard. Data obtained in December 2025.

- Policy SC2: Housing mix, Accessibility and Adaptability
- Policy SC3: Sustainable Design and Construction
- Policy SC10: Habitat Protection, Biodiversity and Net Gain
- Policy SC13: Urban Greening Factor

ES 18 Affordable housing has been tested at a tenure split of 70% affordable / social rent and 30% intermediate. From this baseline tenure mix, we can make recommendations on the specific types of affordable tenures which are viable across Hastings.

ES 19 For all other policy requirements, we have included specific costs within our appraisals which have been informed by recognised sources, other local plan viability studies and publicly available data. As noted, these costs have also been consulted on as part of our stakeholder workshop, inviting feedback from landowners, developers and consultants. A full breakdown of these assumptions is included within the main body of this viability report.

CIL

ES 20 As noted in the introduction, a key output of this assessment is to identify the ability to introduce a CIL charge on certain types of development across Hastings. We have tested a range of residential and non-residential development scenarios (referred to as 'typologies') to establish the ability to introduce a levy whilst maintaining viability.

ES 21 The combined costs of the updated policy requirements and CIL contributions will need to be balanced to ensure that development in Hastings remains viable and deliverable. For example, if the Council wish to pursue the introduction of a CIL charge, then this may need to be balanced against a reduced package of policy requirements. Conversely, if the updated policy requirements within the emerging Local Plan substantially increase the costs of development, then CIL rates may need to be adjusted to maintain viability.

Developer's Return / Profit

ES 22 The testing reflects the range of developer's profit set out in the Viability PPG of between 15% - 20% on GDV. It is widely accepted that the risk profile on affordable housing is lower as developers have an end-user and benefit from a golden brick payment structure (i.e. income received during the construction period).

ES 23 Similarly, the target returns adopted for commercial uses and specialist residential accommodation (e.g. BTR & older persons housing) have been adjusted to ensure they reflect the specific type of development being tested and associated risk profiles. These risk profiles will vary from site-to-site and may need to be considered at the application stage.

Land Value

ES 24 The benchmark land values (BLVs) assumed in our testing have been determined using the Existing Use Value plus Premium method (EUV+) – as set out in the PPG. We have undertaken an updated assessment of land values across Hastings to inform

the BLVs adopted in the viability testing. A separate Land Market Paper has been prepared and is appended to the main report.

ES 25 For the land value calculation of greenfield sites, we have referred to transactions and listings of agricultural land across Hastings and the surrounding areas, and then applied a multiplier premium. For the brownfield sites, a bespoke approach has been adopted to reflect the variety of sites expected to come forward but has again referred to transactional evidence and listing data. Brownfield sites have also included a landowner premium which is applied on top of the EUV on a percentage basis.

ES 26 It is important to note that the BLV should not be expected to equate to the market value of land, nor the price expected to be paid in a marketplace. It is instead a mechanism against which the viability of developer contributions and policy requirements can be assessed.[2] Further, should any development incur additional site-specific or abnormal costs beyond those identified in this study, then it would be expected that these would be reflected in a reduced land value. This follows the approaches promoted in both the Viability PPG and RICS Professional Standard.

Approach

ES 27 The viability testing has considered both residential and non-residential growth identified in the emerging Local Plan, as follows:

Residential

ES 28 For plan-making, it is not necessary to individually test the viability of every site allocated within the plan, or expected to come forward over the plan period. Instead, the Viability PPG promotes a typology approach, which allows sites to be grouped based on similar characteristics such as location, size, density, value zone and whether they are brownfield or greenfield.

ES 29 The typologies adopted in this viability assessment are primarily based on the sites which are being considered as part of the plan-making process. We understand these sites have been through a preliminary assessment and screening process to consider those which have a higher prospect of coming forward for development over the plan period. To ensure the testing is reflective of other site sizes and capacities which are not accounted for within the list provided by the Council, we have also devised hypothetical typologies to ensure an even spread of site and development types across the Borough.

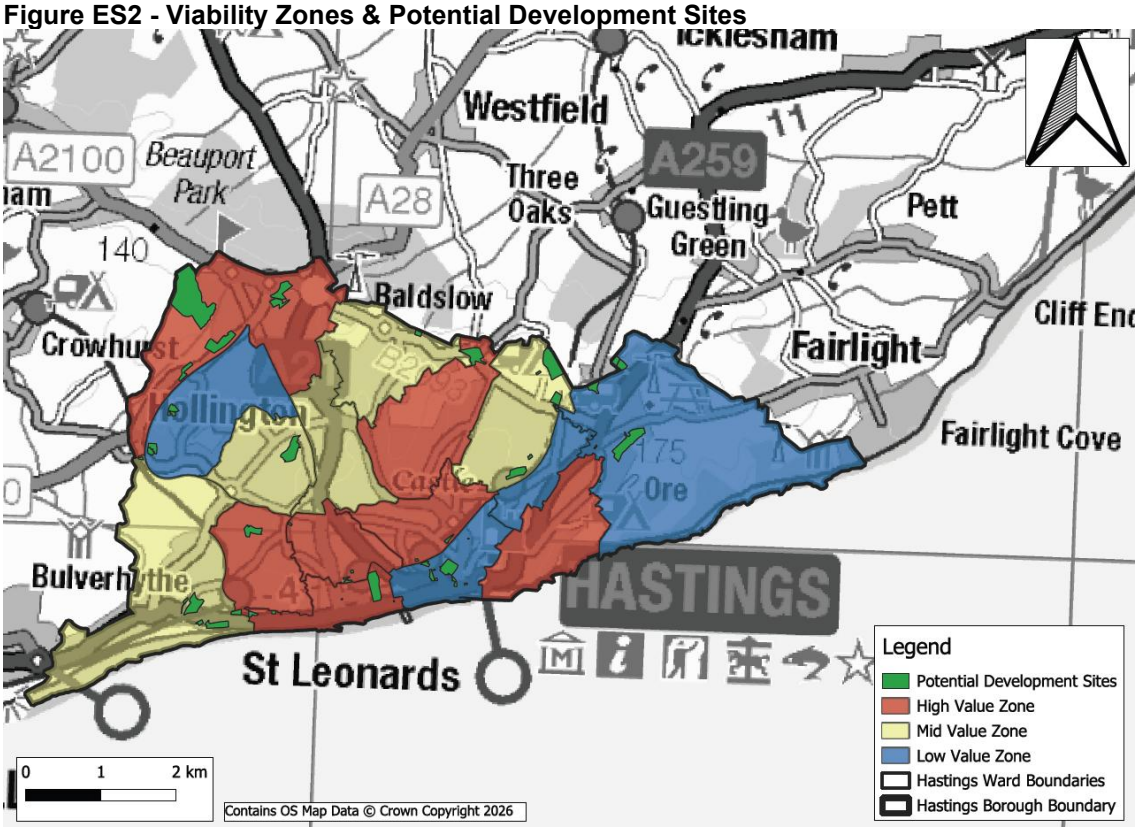
ES 30 Similarly, there are no specific allocations within the plan which require the provision of specialist types of residential accommodation, notably older persons' housing and build-to-rent. Accordingly, we have instead developed 'generic' typologies based on the typical expectations of these types of housing developer / provider.

ES 31 In determining the residential typologies, the guidance allows us to vary the testing by value zone. We have considered new-build sold prices of schemes across Hastings, including an analysis of individual unit prices, sizes and £ / psm rates. Based on our

[2] RICS, Assessing viability in planning under the National Planning Policy Framework 2019 for England, Professional Standard, 1st Edition, March 2021

residential market review, we have devised three value zones to use in the testing. We then overlaid the potential development sites onto a map showing the value zones to understand the pattern of development across Hastings, as shown in Figure ES2.

Figure ES2 - Viability Zones & Potential Development Sites



Source: AspinallVerdi, 2026.

ES 32 The guidance also allows us to vary the testing by greenfield and brownfield development. We have therefore analysed the pattern of proposed development in each of the value zones by land type. We have considered the gross and net densities of sites expected to come forward, along with the housing mixes set out in the latest Housing & Economic Development Needs Assessment (HEDNA).[3] A breakdown of the typologies is appended to the main report.

Employment & Non-residential

ES 33 The Council have provided data for specific employment sites which are expected to come forward for development. We have also developed 'generic' non-residential typologies based on the most common types of commercial development, which have been varied subject to size and location (i.e. greenfield or brownfield). These are referred to as 'non-residential typologies'.

ES 34 As with the residential testing, these models will identify whether the updated policy requirements for non-residential development in Hastings are viable, and also whether there is scope to introduce CIL on different types of non-residential development.

[3] DLP Research & Analysis, August 2026. Housing and Economic Development Needs Assessment Update (Draft for Review).

Stakeholder Consultation

ES 35 In July 2026, AspinallVerdi hosted a stakeholder consultation event which set out the approach, evidence base and working assumptions formed through our market research (residential, commercial, land). We also shared the proposed cost assumptions (including base build, fees, finance etc.) along with those for specific policy requirements in the Pre-Submission Version (Regulation 19) Draft Local Plan.

ES 36 The purpose of the workshop was to invite feedback, comments and representations which could then be considered as part of the viability testing, promoting a collaborative approach to the assessment. Observations were invited and shared during the event and we have since received a number of submissions sharing views on the assumptions. These have been reviewed and adjustments have been made to our inputs where relevant and justified.

Viability Testing Results

ES 37 The appraisals have been through an iterative process with the Council, which have been refined in light of feedback received and following the completion of our stakeholder workshop. This process has informed our recommendations on the extent of policy requirements sought by the Local Plan and introduction of a CIL charge.

ES 38 We have appraised the typologies using the baseline assumptions described above and included extensive sensitivity testing for each appraisal. The baseline appraisals are fully policy-compliant, in that all the policy costs are fixed inputs. In addition to the Hastings-specific policies above, we have also included allowances for the Future Homes Standard and Building Safety Levy in all relevant appraisals.

ES 39 Affordable housing has been tested incrementally to establish where the viability tipping point lies with each appraisal. We have then made a stand-back judgement across all appraisals to identify appropriate thresholds which allow the majority of unconsented land supply to come forward whilst balancing the viability of the policy asks in the updated Local Plan. In this respect, we have tested three scenarios:

- **Scenario A** – Baseline appraisals with all fixed policy costs, as described in Paragraph ES 17.
- **Scenario B** – All policy costs removed (including affordable housing) excluding those which are mandatory (i.e. Building Safety Levy, Biodiversity Net Gain & Future Homes Standard)
- **Scenario C** – Pragmatic appraisals with adjustments to policy requirements, base build costs, densities and benchmark land value.

ES 40 Below we summarise the emerging outcomes and recommendations from our viability appraisals. The appraisals are classified into one of three categories, as follows:

- **Viable** – the development can meet the full cost of the policy requirements and CIL contributions whilst also generating a positive residual land value which exceeds the benchmark land value;

- **Marginal** – the development can meet the full cost of the policy requirements and CIL contributions whilst generating a positive residual land value which falls below the benchmark land value; or,
- **Unviable -** the development cannot generate a positive residual land value with the full cost of policy requirements and CIL contributions.

Residential Typologies

ES 41 Our residential typology testing has shown that flexibility and pragmatism will be required in the application of policy requirements in the emerging Local Plan to ensure that development remains viable and deliverable in Hastings.

ES 42 The Scenario A baseline appraisals have shown that viability is challenging across all three value zones, with only two of the 32no. typologies shown as viable. These appraisals include all fixed policy costs sought in the Pre-Submission Version (Regulation 19) Draft Local Plan, Section 106 contributions and affordable housing at 40% on greenfield sites and 25% on brownfield.

ES 43 We then sought to identify the impact of removing the costs associated with policies in the Pre-submission Draft Local Plan. The Scenario B appraisals removed all policy costs, including affordable housing and S106 contributions, whilst retaining those which are mandated by national policy or building regulations (i.e. BSL, FHS, BNG). With the majority of policy requirements removed from the Scenario B appraisals, viability is shown to improve, however the majority of typologies remain unviable or marginal.

ES 44 Drawing on the methodologies established in the viability assessments supporting the Local Plans in The Wirral and Central Lancashire, and substantiated by the ministerial direction in Matthew Pennycook MP's July 2026 letter to the Planning Inspectorate, we then tested a third scenario which adopted a pragmatic approach to viability (Scenario C). This was also supported by recent Local Plan Monitoring Report (LPMR) data which demonstrated that, in spite of recent market conditions characterised by subdued house price growth and cost inflation, Hastings has shown continued and strengthened housing delivery in recent years (including both market sale and affordable housing).

ES 45 The Scenario C appraisals demonstrate that, in some instances, typologies could support affordable housing contributions in excess of the thresholds currently sought in the adopted Local Plan in Hastings. The outcomes were shown to vary subject to the location (value zone), development and land type, however viable greenfield typologies could support contributions ranging from 0 – 40%, whilst brownfield could support contributions equivalent to 2 – 25%.

ES 46 It is important to recognise that the viability challenges demonstrated across Scenarios A & B continued for certain typologies in Scenario C, in that some remained unviable without any affordable housing contributions. The viability of brownfield sites, which account for the majority of those being considered as part of the plan-making process, also remained challenging. This reinforces the need for the Council to allow for flexibility in their plan policies.

ES 47 In light of the above, Table ES1.1 sets out our recommendations arising from the residential typology testing. Across all typologies and scenarios, the testing has shown that it is not possible to introduce a viable CIL charge for residential development in Hastings at this time.

Table ES1.1 – Residential Typology Recommendations

Site Type	Recommendations
Greenfield	**Up to 40% affordable housing,** subject to the requirements of Policy SP13. Based on Scenario C pragmatic appraisals.
Brownfield	**Up to 25% affordable housing,** subject to the requirements of Policy SP13. Based on Scenario C pragmatic appraisals.

Source: AspinallVerdi, 2026.

ES 48 We highlight that the viability of brownfield sites is influenced by higher Benchmark Land Values, remediation costs and interest rates, as well as the increased build costs that most developments are experiencing, especially smaller schemes which incorporate median BCIS. Flatted development, which is expected to be more common on brownfield sites in Hastings, is also shown to be less viable than sites that deliver solely housing. Flatted development costs are higher on a £ / psm basis and also require an adjustment to account for common areas such as entrance halls, plant rooms and circulation space. It is expected that the combination of these higher / additional costs is the reason as to why flatted development on brownfield land is less viable.

ES 49 We note that, across the plan period, both land values and build costs are likely to experience changes, which may lead to a shift in the viability position. All things being equal, if costs increase due to (say) higher design standards, then the value of the land on a residual basis should reduce. To a certain extent this is an inevitable consequence of higher building standards. However, if the cost is too great or not phased in over an appropriate time frame, the impact on the land value could be too great and stymie development.

Older Persons' Housing

ES 50 Older persons' accommodation is less viable than general needs accommodation due to the higher marketing costs, longer sales periods, reduced building efficiency and higher base build costs. Our appraisals have shown that older persons' housing is unviable at the same thresholds identified for market sale housing. The majority of older persons' housing typologies remain unviable when the affordable housing contribution is reduced to 0%. The Council may therefore need to be more flexible in their approach to affordable housing and other policy contributions on this type of accommodation.

ES 51 Please note, none of the sites within the plan are expected to specifically deliver older persons housing developments, and hence the typologies developed within this assessment are hypothetical. In this respect, viability may improve subject to site-specific design and location within Hastings.

Build-to-Rent (BTR)

ES 52 The appraisals have tested both multifamily flatted BTR developments, as well as single family housing schemes. The results are mixed, with multifamily BTR showing a similar trend to other flatted typologies tested. Viability improves with the single family housing BTR typologies, however the fundamental outcome is the same in that the cumulative policy costs sought in the Pre-submission Draft Local Plan render development unviable.

ES 53 Build to Rent / Private Rented Sector development is a distinct asset class which differs from traditional housebuilding (i.e. speculative build to sell) and the assessment of viability can be adapted from the traditional approach to account for differences in how BTR development is operated, managed, funded, delivered and disposed. We understand that despite the appraisal outcomes, two BTR schemes have been delivered recently in Hastings. As such, it may be that the viability of any BTR development improves subject to how specific schemes or sites are delivered, funded and disposed of in Hastings.

ES 54 Given the variance in outcomes, coupled with the fact that no sites are specifically allocated for BTR development, the Council may wish to omit a BTR specific requirement in their affordable housing policy, or alternatively, mirror national policy in the Local Plan. In the absence of any BTR specific policy, the Council have assurance that affordable housing can be negotiated and secured on BTR developments in line with the NPPF and PPG (i.e. 20% affordable private rent, provided at a 20% discount to market rent).

Employment & Non-residential

ES 55 The policy asks for employment and non-residential development are reduced when compared with residential development. These appraisals have included the costs to meet 10% biodiversity net gain, net zero carbon, urban greening factor (where applicable) and Section 106 contributions.

ES 56 The employment typologies, which are based on sites being considered as part of the plan-making process, show mixed results. Employment development on greenfield is shown to be more viable than the brownfield sites, with all but one showing a surplus above the benchmark land value. The sole greenfield typology shown as marginal is the largest site and generates a relatively small deficit equivalent to less than 1% of the development costs. Hence, we expect that the majority of greenfield employment sites being considered as part of the plan-making process are capable of delivering the emerging policy requirements – namely BNG, net zero carbon and S106 contributions.

ES 57 Brownfield employment development is again challenging, with none of the sites shown as viable. The three smallest brownfield typologies are marginal, and are shown to become viable with a c. 10% reduction in build costs, or 10% increase in GDV. For the largest brownfield typology, which is shown as unviable with all policy requirements fixed in the appraisal, more substantial adjustments of +/- 30% are required to become viable.

ES 58 For the viable greenfield sites, we have sought to understand the maximum CIL charge which can be sought whilst remaining viable. This shows that maximum rates of

between c. £92 - £218 psm could be levied, although this does not allow for a buffer against market movements. A charge of c. £55-£60 psm could therefore be appropriate whilst retaining a minimum buffer of c. 35-40% on the maximum rate, however the administration of introducing CIL solely for specific employment developments may prove overly onerous when considering the wider factors (e.g. implementation, monitoring, enforcement, resourcing etc.).

ES 59 As with the residential appraisals, the Council may need to take a flexible approach to policy requirements concerning employment development to ensure sites remain deliverable.

ES 60 The non-residential typologies tested a series of different retail and office uses but were not based on any specific sites or allocations in the plan. The outcomes are shown to be variable, with most unviable. The two viable typologies are those designed to be reflective of a larger supermarket development. The remaining retail typologies across both greenfield and brownfield sites are shown to be unviable. Office uses are also unviable. This is not inconsistent with similar testing across other authority areas.

ES 61 The Council may also need to be flexible in their policy requirements for retail and office developments expected to come forward over the plan period. As with employment uses, it is not possible to introduce a viable CIL charge on most non-residential uses.

Summary

ES 62 The assessment has shown that Hastings presents a distinct case in terms of development economics and viability, diverging from the broader South East region. This is characterised by comparatively lower gross development values alongside elevated development cost data, which combine to compress residual land values and viability margins. However, local monitoring data clearly demonstrates that development continues to come forward in Hastings, evidenced by robust delivery of both market sale and affordable housing in recent years and in spite of recent market conditions.

ES 63 The variance in outcomes across the typologies, uses and appraisals tested demonstrates the importance of ensuring flexibility within the plan to ensure that development remains viable and deliverable in response to variable market conditions. This may mean that standards and requirements which go above those set out in national policy or building regulations are not made mandatory for all developments, allowing the Council to prioritise essential infrastructure where necessary to ensure development remains sustainable over the plan period.

Limitations

ES 64 The assessment has considered ‘buffers’ and sensitivity analyses to judge the margin of viability. We recommend that, in accordance with best practice, the plan-wide viability is reviewed as befits the plan-making process to reflect that property market cycles change. Furthermore, to facilitate the process of review, we recommend that the Council monitors or otherwise takes account of the development appraisal parameters herein, particularly data on land values across the area.

1 Introduction

1.1 AspinallVerdi have been reappointed by Hastings Borough Council to update the Local Plan Viability Assessment (LPVA) in support of the emerging Local Plan. The study was originally commissioned in 2020 and has been through various iterations as emerging policy requirements have been refined and consultations have been completed, resulting in a draft version of the LPVA being submitted to the Council in Summer 2024. The purpose of this updated assessment is to determine whether the latest policy requirements set out in the Pre-Submission Version (Regulation 19) Draft Local Plan are viable and deliverable.

1.2 The assessment will also identify whether, in conjunction with the expanded policy requirements, there is scope to introduce a Community Infrastructure Levy (CIL) for different types of development across Hastings. Hastings does not currently have a CIL Charging Schedule.

1.3 Our viability assessment has been undertaken in accordance with the following:

- National Planning Policy Framework (NPPF)
- Planning Practice Guidance (PPG)
- RICS Financial Viability in Planning: Conduct and Reporting, Professional Standard, 1st Edition, May 2019
- RICS, Assessing viability in planning under the National Planning Policy Framework 2019 for England, Professional Standard, 1st Edition, March 2021

1.4 Please note, the outcomes shared in this report are based on the emerging Local Plan policies as of September 2026 and may be subject to change.

RICS Practice Statement

1.5 Our viability assessment has been carried out in accordance with the RICS[4] Financial Viability in Planning: Conduct and Reporting Professional Standard (1st Edition, May 2019).

1.6 The study has also been carried out in accordance with the RICS Assessing Viability in Planning under the National Planning Policy Framework 2019 for England Professional Standard (1st edition, March 2021), having regard to the latest revisions to the National Planning Policy Framework (NPPF, last updated February 2025) and relevant Planning Practice Guidance (PPG).

Objectivity, Impartiality & Reasonableness

1.7 We have carried out our review in collaboration with the Council as the Local Planning Authority and in consultation with industry, including landowners, developers, promoters, consultants and agents. At all times we have acted with objectivity, impartiality and without interference when carrying out our viability assessment.

1.8 At all stages of the viability process, we have advocated reasonable, transparent and appropriate engagement between the parties.

[4] Royal Institution of Chartered Surveyors

Conflict of Interest

1.9 We confirm that we have no conflict of interest in providing this advice and we have acted independently and impartially.

RICS Valuation – Global Standards

1.10 This report and the accompanying appraisals have been prepared in line with RICS valuation guidance. However, it is first and foremost an evidence base to support the emerging Hastings Borough Council Local Plan. The appraisals are not 'Red Book'[5] valuations and should not be relied upon as such.

Report Structure

1.11 The remainder of this report is structured as follows:

Section:	**Contents:**
Section 2 – National Policy Context	This section sets out the statutory requirements for the Local Plan and CIL viability, including the NPPF, CIL Regulations and PPG.
Section 3 – Local Plan Context	This section sets out the details of the policy requirements set out in the Local Plan and a summary of the impact they will have on viability.
Section 4 – Viability Assessment Method	This section describes our methodology for appraising the viability of development which is based on the residual approach, as required by guidance and best practice. Please note the Benchmark Land Value (BLV) caveats for future site-specific appraisals.
Section 5 – Residential Typologies & Assumptions	This chapter summarises the evidence base, property market context and assumptions for the residential sites.
Section 6 – Non-residential Typologies & Assumptions	This section summarises the approach and assumptions made to test the non-residential sites.
Section 7 – Residential Viability Results	This section sets out the detailed appraisal results for the residential typologies with our commentary.
Section 8 – Non-residential Viability Results	This section sets out the detailed appraisal results for the commercial typologies with our commentary.

[5] RICS Valuation, Global Standards 2022.

Section:	Contents:
Section 9 – Conclusions and Recommendations	Finally, we make our recommendations and discuss the implications of Plan viability, the potential for CIL, and delivery.

2 National Policy Context

2.1 Our financial viability assessment has been carried out in accordance with the statutory requirements, comprising primary legislation, planning policy, statutory regulations and guidance. Below, we identify the key references relevant to this assessment within the National Planning Policy Framework (NPPF) and Planning Practice Guidance (PPG). Please note that this is not meant to be exhaustive and direct reference should be made to the relevant sections of both publications.

2.2 We note that an updated version of the NPPF has been published during the preparation of this evidence (17th August 2026). However, this should not impact the progress of the emerging Local Plan in Hastings given the intention to adopt the plan through transitional arrangements set out in the December 2024 NPPF.

National Planning Policy Framework (2025)

2.3 The National Planning Policy Framework[6] (NPPF) confirms the Government's planning policies for England, setting out how they should be applied and providing a framework for local plans to sustainably provide for housing and other development.[7] It emphasises the primacy of the development plan in determining planning applications and must be considered when preparing plans, as well as being a material consideration in all planning decisions.

2.4 It is important to note that paragraph 173 of the original 2012 NPPF has been deleted in more recent versions. The old paragraph 173 referred to viability and required *'competitive returns to a willing land owner and willing developer to enable the development to be deliverable'.*

2.5 The updated NPPFs published since 2019 refer increasingly to deliverability as well as viability, which requires that infrastructure can be delivered to support schemes (with sustainable land values and profit margins).

2.6 We draw attention to the following key paragraphs (Table 2.1).

Table 2.1 - NPPF Key References

Paragraph Number - Item	Quote / Comments
Para 35 - Development contributions	Plans should set out the contributions expected from development. This should include setting out the levels and types of affordable housing provision required, along with other infrastructure (such as that needed for education, health, transport, flood and water management, green and digital infrastructure). Such policies should not undermine the deliverability of the plan.

[6] We note that a new NPPF has been released on 17th August 2026. The analysis herein is based on the previous NPPF. We are not aware of any implications currently for our approach and methodology herein.
[7] National Planning Policy Framework, 2025. Paragraph 1.

Paragraph Number - Item	Quote / Comments
Para 58 – Planning obligations [tests]	Planning obligations must only be sought where they meet all of the following tests: a) necessary to make the development acceptable in planning terms; b) directly related to the development; and c) fairly and reasonably related in scale and kind to the development. * Notwithstanding the latest changes to the CIL Regulations (2015) which do away with the requirements for a Regulation 123 list of infrastructure, these tests ensure that Local Authorities cannot charge S106 or CIL twice for the same infrastructure (as this would not be fair and reasonable).
Para 59 – Presumption of viability	Where up-to-date policies have set out the contributions expected from development, planning applications that comply with them should be assumed to be viable. It is up to the applicant to demonstrate whether particular circumstances justify the need for a viability assessment at the application stage. The weight to be given to a viability assessment is a matter for the decision maker, having regard to all the circumstances in the case, including whether the plan and the viability evidence underpinning it is up to date, and any change in site circumstances since the plan was brought into force. All viability assessments, including any undertaken at the plan-making stage, should reflect the recommended approach in national planning guidance, including standardised inputs, and should be made publicly available.
Para 65 – Unit Threshold	Provision of affordable housing should not be sought for residential developments that are not major developments, other than in designated rural areas (where policies may set out a lower threshold of 5 units or fewer).
Para 65 – Vacant Building Credit (VBC)	To support the re-use of brownfield land, where vacant buildings are being reused or redeveloped, any affordable housing contribution due should be reduced by a proportionate amount.
Para 66 – Affordable Home Ownership	Where major development involving the provision of housing is proposed, planning policies and decisions should expect that the mix of affordable housing required meets identified local needs, across Social Rent, other

Paragraph Number - Item	Quote / Comments
	affordable housing for rent and affordable home ownership tenures.

Source: NPPF (last updated February 2025) & AspinallVerdi, 2026.

Planning Practice Guidance on Viability

2.7 The Planning Practice Guidance on Viability was first published in March 2014 and has subsequently been updated on numerous occasions, latterly December 2025. Table 2.2 summarises the key extracts from the PPG relevant to this assessment.

Table 2.2 - PPG Viability Key Cross-References

Paragraph Number - Item	Quote / Comments
Para 001 – Setting Policy requirements	Plans should set out the contributions expected from development. This should include setting out the levels and types of affordable housing provision required, along with other infrastructure (such as that needed for education, health, transport, flood and water management, green and digital infrastructure). These policy requirements should be informed by evidence of infrastructure and affordable housing need, and a proportionate assessment of viability that takes into account all relevant policies, and local and national standards, including the cost implications of the Community Infrastructure Levy (CIL) and section 106. Policy requirements should be clear so that they can be accurately accounted for in the price paid for land. To provide this certainty, affordable housing requirements should be expressed as a single figure rather than a range. Different requirements may be set for different types or location of site or types of development. This confirms that Local Authorities can set different levels of CIL and/or affordable housing by greenfield or brownfield typologies (see below also).
Para 002 - Deliverability	It is the responsibility of plan makers in collaboration with the local community, developers and other stakeholders, to create realistic, deliverable policies. Drafting of plan policies should be iterative and informed by engagement with developers, landowners, and infrastructure and affordable housing providers. And, policy requirements, particularly for affordable housing, should be set at a level that takes account of affordable housing and infrastructure needs and allows for the planned types of sites and development to be

Paragraph Number - Item	Quote / Comments
	deliverable, without the need for further viability assessment at the decision-making stage. Also, it is the responsibility of site promoters to engage in plan making, take into account any costs including their own profit expectations and risks, and ensure that proposals for development are policy compliant.
Para 003/4 - Typologies	Plan makers can use site typologies to determine viability at the plan making stage. A typology approach is a process plan makers can follow to ensure that they are creating realistic, deliverable policies based on the type of sites that are likely to come forward for development over the plan period. Plan makers can group sites by shared characteristics such as location, whether brownfield or greenfield, size of site and current and proposed use or type of development. The characteristics used to group sites should reflect the nature of typical sites that may be developed within the plan area and the type of development proposed for allocation in the plan.
Para 005 – Strategic Sites testing	Plan makers can undertake site specific viability assessment for sites that are critical to delivering the strategic priorities of the plan. This could include, for example, large sites, sites that provide a significant proportion of planned supply, sites that enable or unlock other development sites or sites within priority regeneration areas.
Para 011 - Principles for carrying out a viability assessment (strike a balance)	Viability assessment is a process of assessing whether a site is financially viable, by looking at whether the value generated by a development is more than the cost of developing it. This includes looking at the key elements of gross development value, costs, land value, landowner premium, and developer return – i.e., a residual land value approach. In plan making and decision-making viability helps to strike a balance between the aspirations of developers and landowners, in terms of returns against risk, and the aims of the planning system to secure maximum benefits in the public interest through the granting of planning permission.
Para 012 – Gross Development Value	For residential development, this may be total sales and/or capitalised net rental income from developments.

Paragraph Number - Item	Quote / Comments
	Grant and other external sources of funding should be considered. For commercial development a broad assessment of value in line with industry practice may be necessary. For broad area-wide or site typology assessment at the plan making stage, average figures can be used, with adjustment to take into account land use, form, scale, location, rents and yields, disregarding outliers in the data.
Para 013 – Development costs	Assessment of costs should be based on evidence which is reflective of local market conditions. Costs include: - build costs - e.g. Building Cost Information Service (BCIS) - abnormal costs* - site-specific infrastructure costs* - the total cost of all relevant policy requirements* - general finance - professional*, project management, sales, marketing and legal costs incorporating organisational overheads associated with the site - project contingency costs should be included in circumstances where scheme specific assessment is deemed necessary, with a justification for contingency relative to project risk and developers return *PPG suggests that these costs should be taken into account when defining benchmark land value.
Para 014 – Benchmark Land Value (BLV)	A benchmark land value should be established on the basis of the existing use value (EUV) of the land, plus a premium for the landowner.
Para 015 - What factors should be considered to establish BLV?	Benchmark land value should: - be based upon existing use value (EUV) - allow for a premium to landowners - reflect the implications of abnormal costs; site-specific infrastructure costs; and professional site fees.
Para 015 – Market evidence in BLV	Market evidence can also be used as a cross-check of benchmark land value but should not be used in place of

Paragraph Number - Item	Quote / Comments
	benchmark land value. There may be a divergence between benchmark land values and market evidence; and plan makers should be aware that this could be due to different assumptions and methodologies used by individual developers, site promoters and landowners.
Para 015 – Circularity of land values	[Market] evidence should be based on developments which are fully compliant with emerging or up to date plan policies, including affordable housing requirements at the relevant levels set out in the plan. Where this evidence is not available plan makers and applicants should identify and evidence any adjustments to reflect the cost of policy compliance. This is so that historic benchmark land values of non-policy compliant developments are not used to inflate values over time.
Para 016 – Existing Use Value (EUV)	EUV is the value of the land in its existing use. Existing use value is not the price paid and should disregard hope value. Existing use values will vary depending on the type of site and development types. EUV can be established in collaboration between plan makers, developers and landowners by assessing the value of the specific site or type of site using published sources of information such as agricultural or industrial land values, or if appropriate capitalised rental levels at an appropriate yield (excluding any hope value for development).
Para 017 – Premium	[The premium] is the amount above existing use value (EUV) that goes to the landowner. The premium should provide a reasonable incentive for a landowner to bring forward land for development while allowing a sufficient contribution to fully comply with policy requirements. Plan makers should establish a reasonable premium to the landowner for the purpose of assessing the viability of their plan. This will be an iterative process informed by professional judgement and must be based upon the best available evidence informed by cross sector collaboration. Market evidence can include benchmark land values from other viability assessments. Land transactions can be used but only as a cross check to the other evidence.

Paragraph Number - Item	Quote / Comments
	Any data used should reasonably identify any adjustments necessary to reflect the cost of policy compliance (including for affordable housing), or differences in the quality of land, site scale, market performance of different building use types and reasonable expectations of local landowners. Policy compliance means that the development complies fully with up-to-date plan policies including any policy requirements for contributions towards affordable housing requirements at the relevant levels set out in the plan.
Para 017 – Price paid evidence	Local authorities can request data on the price paid for land (or the price expected to be paid through an option or promotion agreement). The PPG emphasises throughout (para 2, 3, 6, 11, 14, 18) that the price paid for land is not a relevant justification for failing to accord with relevant policies in the plan. However, data on actual price paid (or the price expected to be paid through an option or promotion agreement) is particularly relevant for strategic sites to ensure that they are deliverable over-time.
Para 018 – Alternative Use Value (AUV)	This is more at the decision-making stage as our site typologies herein are all for broadly defined uses.
Para 019 – Profit (return to developers)	For the purpose of plan making an assumption of 15-20% of gross development value (GDV) may be considered a suitable return to developers in order to establish the viability of plan policies. Plan makers may choose to apply alternative figures where there is evidence to support this according to the type, scale and risk profile of planned development. A lower figure may be more appropriate in consideration of delivery of affordable housing in circumstances where this guarantees an end sale at a known value and reduces risk. Alternative figures may also be appropriate for different development types. In this respect we have assumed profit at the top end of the range (i.e. worst-case scenario) and provided sensitivities on the profit margin between 15 and 20%.
Para 020 – Build to rent (BTR)	The economics of build to rent schemes differ from build for sale as they depend on a long-term income stream. For build to rent, it is expected that the normal form of affordable housing provision will be affordable private

Paragraph Number - Item	Quote / Comments
	rent. Where plan makers wish to set affordable private rent proportions or discount levels at a level differing from national planning policy and guidance, this can be justified through a viability assessment at the plan making stage. See the separate PPG guidance for Build to Rent set out below.

Source: PPG Viability (last updated 16 December 2025) and AspinallVerdi, 2026.

Planning Practice Guidance on CIL

2.8 There is a separate section of the PPG for CIL (Community Infrastructure Levy). The CIL PPG was first published in June 2014 and last updated in April 2024. The PPG is intended to provide clarity on the CIL Statutory Regulations which were first introduced in April 2010 and amended on several subsequent occasions, most recently in April 2024. The Regulations have never been consolidated.

2.9 We draw your attention to the following key paragraphs (Table 2.3).

Table 2.3 - PPG CIL Key Cross-References

Paragraph Number - Item	Quote / Comments
Para 010 – Appropriate balance	When deciding the levy rates, an authority must strike an appropriate balance between additional investment to support development and the potential effect on the viability of developments.
Para 017 – Infrastructure Funding Statement	The infrastructure funding statement should identify infrastructure needs, the total cost of this infrastructure, anticipated funding from developer contributions, and the choices the authority has made about how these contributions will be used.
Para 019 – Proportionate evidence to support a levy charge	Viability assessments should be proportionate, simple, transparent and publicly available in accordance with the viability guidance. Viability assessments can be prepared jointly for the purposes of both plan making and preparing charging schedules. This evidence should be presented in a document (separate from the charging schedule) that shows the potential effects of the proposed levy rate or rates on the viability of development across the authority's area. Where the levy is introduced after a plan has been made, it may be appropriate for a local authority to supplement

Paragraph Number - Item	Quote / Comments
	plan viability evidence with assessments of recent economic and development trends, and through working with developers (e.g. through local developer forums), rather than by procuring new evidence.
Para 020 - How should development be valued for the purposes of the levy?	Charging authorities should use evidence in accordance with planning practice guidance on viability. (see Table 2.2 - PPG Viability Key Cross-References above)
Para 020 - 'Appropriate available evidence'	A charging authority must use 'appropriate available evidence' (as defined in the section 211(7A) of the Planning Act 2008) to inform the preparation of their draft charging schedule. It is recognised that the available data is unlikely to be fully comprehensive. Charging authorities need to demonstrate that their proposed levy rate or rates are informed by 'appropriate available' evidence and consistent with that evidence across their area as a whole.
Para 020 – Sampling [typologies]	A charging authority should directly sample an appropriate range of types of sites across its area. Charging authorities that decide to set differential rates may need to undertake more fine-grained sampling. The sampling exercise should provide a robust evidence base about the potential effects of the rates proposed, balanced against the need to avoid excessive detail.
Para 020 – Viability buffer	A charging authority's proposed rate or rates should be reasonable, given the available evidence, but there is no requirement for a proposed rate to exactly mirror the evidence. For example, this might not be appropriate if the evidence pointed to setting a charge right at the margins of viability. There is room for some pragmatism. It would be appropriate to ensure that a 'buffer' or margin is included, so that the levy rate is able to support development when economic circumstances adjust. *Note that the PPG does not specify what the appropriate buffer should be.
Para 022 – Differential rates	Charging authorities should consider how they could use differential rates to optimise the funding they can receive through the levy. Differences in rates need to be justified by reference to the viability of development.

Paragraph Number - Item	Quote / Comments
	Differential rates should not be used as a means to deliver policy objectives. Differential rates may be appropriate in relation to: • geographical zones; • types of development; and/or; • scales of development. A charging authority that plans to set differential rates should seek to avoid undue complexity. Charging schedules with differential rates should not have a disproportionate impact on particular sectors or specialist forms of development. *In all cases, differential rates must not be set in such a way that they constitute a notifiable State aid [now referred to as subsidy control since leaving the EU].
Para 023 – Differential rates by use	Charging authorities may also set differential rates by reference to different intended uses of development. The definition of ”use” for this purpose is not tied to the classes of the Use Classes Order although that Order does provide a useful reference point. *Para 201 describes how changes to the Use Classes Order affect charging schedules that set differential rates according to use classes that no longer exist.
Para 024 – Differential rates by scale	Rates can be set by reference to either floor area or the number of units or dwellings in a development.
Para 025 – differential rates by land value uplift [greenfield / brownfield]	The uplift in land value that development creates is affected by the existing use of land and proposed use. For example, viability may be different if high value uses [e.g. residential] are created on land in an existing low value area [e.g. agricultural-greenfield area] compared to the creation of lower value uses or development on land already in a higher value area [e.g. urban brownfield area]. Charging authorities can take these factors into account in the evidence used to set differential levy rates, in order to optimise the funding received through the levy. *Given the increasing emphasis in the NPPF and PPG on certainty in respect of policy obligations; innovation in respect of best practice; and the wisdom of bringing Local Plan and CIL viability reviews into synchronisation, we have long advocated differentiating CIL (and affordable housing targets) by greenfield and brownfield

Paragraph Number - Item	Quote / Comments
	(previously developed land) typologies based on the evidence. *This, together with PPG Viability paragraph 001, therefore confirms that CIL and affordable housing can be differentiated by greenfield and brownfield existing site typologies. This should make the process of planning and development (land value capture) much simpler and more efficient.
Para 026 – Differential rates for zones	Differential rates for geographic zones can be used across a charging authority's area. Authorities may wish to align zonal rates for strategic development sites.
Para 026 – Differential rates for strategic sites	Charging authorities may want to consider how zonal rates can ensure that the levy complements plan policies for strategic sites. This may include setting specific rates for strategic sites that reflect the land value uplift their development creates. Low or zero rates may be appropriate where plan policies require significant contributions towards housing or infrastructure through planning obligations. See also the comments above in respect of the S106 tests and double-dipping. (NPPF Para 57 – Planning obligations)
Para 065 – Social Housing relief [inc. First Homes]	Social housing relief is a mandatory discount that can be applied to most social rent, affordable rent, and intermediate rent dwellings, provided by a local authority or private registered provider, and shared ownership dwellings. Subject to meeting specific conditions, social housing relief can also apply to discounted rental properties provided by bodies which are neither a local authority nor a private registered provider. Mandatory social housing relief can also apply to dwellings where the first and subsequent sales are for no more than 70% of their market value (First Homes). (our emphasis)
Para 128 - Can payment be made in instalments?	'Yes' – Where a charging authority wishes to allow payment by instalments, they must have published an instalment policy on their website. An instalment policy can assist the viability and delivery of development by taking account of financial restrictions, for example in areas

Paragraph Number - Item	Quote / Comments
	such as development of homes within the buy to let sector. *For the purposes of our appraisals herein, we have assumed that the payment of CIL is phased.

Source: PPG CIL (last updated 26 April 2024) and AspinallVerdi, 2026.

PPG on Housing for Older & Disabled People

2.10 Below we highlight the relevant extracts from the planning practice guidance on housing for older and disabled people.

Table 2.4 - PPG on Housing for Older & Disabled People Key Cross-References

Paragraph Number - Item	Quote / Comments
Para 002 – Why is it important to plan for the housing needs of disabled people?	The provision of appropriate housing for people with disabilities, including specialist and supported housing, is crucial in helping them to live safe and independent lives. Unsuitable or unadapted housing can have a negative impact on disabled people and their carers. It can lead to mobility problems inside and outside the home, poorer mental health and a lack of employment opportunities. Providing suitable housing can enable disabled people to live more independently and safely, with greater choice and control over their lives. Without accessible and adaptable housing, disabled people risk facing discrimination and disadvantage in housing. An ageing population will see the numbers of disabled people continuing to increase and it is important we plan early to meet their needs throughout their lifetime.
Para 009 – Minimum requirements for accessible housing	Where an identified need exists, plans are expected to make use of the optional technical housing standards (footnote 46 of the National Planning Policy Framework) to help bring forward an adequate supply of accessible housing. In doing so planning policies for housing can set out the proportion of new housing that will be delivered to the following standards: M4(1) Category 1: Visitable dwellings (the minimum standard that applies where no planning condition is given unless a plan sets a higher minimum requirement) M4(2) Category 2: Accessible and adaptable dwellings M4(3) Category 3: Wheelchair user dwellings

Paragraph Number - Item	Quote / Comments
	Planning policies for accessible housing need to be based on evidence of need, viability and a consideration of site specific factors.
Para 015 – How to assess viability?	Viability guidance sets out how plan makers and decision takers should take account of viability, including for specialist housing for older people. Plans should set out the contributions expected from development. This should include setting out the levels and types of affordable housing provision required, along with other infrastructure. Plans can set out different policy requirements for different types of development. These policy requirements should be informed by evidence of infrastructure and affordable housing need, and a proportionate assessment of viability that takes into account all relevant policies and local and national standards, including the cost implications of Community Infrastructure Levy and Section 106. Viability guidance states that where up to date policies have set out the contributions expected from development, planning applications that comply with them should be assumed to be viable. It is up to the applicant to demonstrate whether particular circumstances justify the need for a viability assessment at the application stage. Such circumstances could include types of development which may significantly vary from standard models of development for sale (for example housing for older people).

Source: PPG (last updated 26 June 2019) and AspinallVerdi, 2026.

Planning Practice Guidance on Build to Rent

2.11 There is a separate PPG for Build to Rent (published 13 September 2018). Table 2.5 highlights the extracts relevant to this assessment.

Table 2.5 - PPG on Build to Rent Key Cross-References

Paragraph Number - Item	Quote / Comments
Para 001 – Should authorities promote BTR?	Build to rent is a distinct asset class within the private rented sector, and has been defined in the National Planning Policy Framework glossary, in order to simplify its treatment within the planning system. As part of their plan making process, local planning authorities should use a local housing need assessment

Paragraph Number - Item	Quote / Comments
	to take into account the need for a range of housing types and tenures in their area including provisions for those who wish to rent. Specific demographic data is available on open data communities which can be used to inform this process. The assessment will enable an evidence-based planning judgement to be made about the need for build to rent homes in the area, and how it can meet the housing needs of different demographic and social groups. If a need is identified, authorities should include a plan policy setting out their approach to promoting and accommodating build to rent. This should recognise the circumstances and locations where build to rent developments will be encouraged – for example as part of large sites and/or a town-centre regeneration area.
Para 002 – Affordable Housing for BTR development	The National Planning Policy Framework states that affordable housing on build to rent schemes should be provided by default in the form of affordable private rent, a class of affordable housing specifically designed for build to rent. Affordable private rent and private market rent units within a development should be managed collectively by a single build to rent landlord. 20% is generally a suitable benchmark for the level of affordable private rent homes to be provided (and maintained in perpetuity) in any build to rent scheme. If local authorities wish to set a different proportion they should justify this using the evidence emerging from their local housing need assessment, and set the policy out in their local plan. Similarly, the guidance on viability permits developers, in exception, the opportunity to make a case seeking to differ from this benchmark. National affordable housing policy also requires a minimum rent discount of 20% for affordable private rent homes relative to local market rents. The discount should be calculated when a discounted home is rented out, or when the tenancy is renewed. The rent on the discounted homes should increase on the same basis as rent increases for longer-term (market) tenancies within the development.
Para 003 – How to calculate affordable private rent	Affordable private rent should be set at a level that is at least 20% less than the private market rent (inclusive of service charges) for the same or equivalent property. Build to rent developers should assess the market rent using the definition of the International Valuations

Paragraph Number - Item	Quote / Comments
	Standard Committee as adopted by the Royal Institution of Chartered Surveyors.

Local Plan Examinations: Letter to the Interim Chief Executive of PINS

2.12 On 15th July 2026, Matthew Pennycook MP, Minister of State for Housing and Planning, wrote to the Interim Chief Executive of the Planning Inspectorate to emphasise the importance of taking an appropriately pragmatic and proportionate approach in respect of deliverability and viability when examining local plans.

2.13 The letter recognises the uncertainty that can arise from economic volatility which may change over the longer-term delivery of a plan. As such, it is encouraged that allocations are assessed against their prospects of delivery over the plan period as a whole, rather than solely against current market conditions. Inspectors should also distinguish between uncertainty arising from prevailing market conditions and evidence indicating fundamental obstacles to delivery.

2.14 Whilst this is not a direct instruction to practitioners undertaking Local Plan Viability Assessments, we have nonetheless been mindful of how our assessment can align with the approach being encouraged in the Minister's letter.

2.15 As practitioners specialising in regeneration as well as housing, we often work in Local Authority areas which have a lot of brownfield regeneration sites and a Brownfield first approach to the Local Plan strategy. We have pioneered the approach to pragmatic scenario testing and this approach has been tested at examination.

3 Local Policy Context

3.1 As part of our viability testing, we have reviewed the updated policies within the Pre-Submission Version (Regulation 19) Draft Local Plan. This is to ensure the cumulative policy requirements are captured in our testing and to identify the influence they have on viability.

3.2 Our full policy impact assessment is contained in Appendix 1. Table 3.1 sets out the policies which we have identified have a direct impact on viability. Further information on the costs assumed within our appraisals for these policies is contained in Chapters 5 and 6.

Table 3.1 – Emerging Local Plan Policies with Viability Implications

Policy	Implications and Assumptions for Viability Assessment
Strategic Policy 2: New and Affordable Housing	This policy seeks to determine the affordable housing thresholds sought from new development of varying sizes and site types over the plan period. It also states the expected tenure mix of 70% affordable / social rent and 30% affordable home ownership. The typologies devised for the purpose of this assessment are based on a list of sites provided by the Council which are being considered as part of the plan-making process. An output of our assessment is to advise on an appropriate level and mix of affordable housing, with consideration for all other policy requirements and the potential introduction of CIL. Our baseline appraisals have assumed the maximum existing affordable housing requirement in adopted policy of 25% for brownfield sites and 40% on greenfield. We have assumed the tenure mix in Policy SP2.
Strategic Policy 5: Meeting the Challenge of Climate Change	This policy requires that new buildings must be built to Net Zero Carbon standard. The appraisals include the costs for meeting Net Zero Carbon Standards as advised in the Net Zero Policy – Technical Evidence Base (August 2026) by Introba and Currie & Brown. This includes both residential and non-residential developments.
Strategic Policy 8: Conserving and Enhancing the Natural Environment	SP8 seeks to preserve and enhance landscape character and the natural environment through various mechanisms, including by delivering net gains for biodiversity. The appraisals include the costs for meeting 10% biodiversity net gain (BNG) in accordance with the Environment Act and Policy SC10 (see below).

Policy	Implications and Assumptions for Viability Assessment
Strategic Policy 10: Transport Infrastructure	This policy states that the Council will secure development contributions to enable the delivery of transport infrastructure and services. The appraisals have included allowances for Section 106 contributions which have been provided by the Council and varied by site / development size.
Strategic Policy 12: Infrastructure Delivery Strategy	Policy SP12 sets out the Council's strategy for infrastructure delivery to support the level of growth expected over the plan period. This includes requiring proposals to take account of existing infrastructure and provide / contribute to the provision of facilities, infrastructure and services. The appraisals include S106 contributions which have been informed by information provided by the Council and varied subject to the size of the site. The contributions include those sought by Hastings Borough Council, including transport, open space, playing pitch, built facilities and police. The appraisals also assumed SuDS are delivered through the external works budget, as well as suitable provision for open space on larger site through the net-to-gross adjustments.
Strategic Policy 13: Development Viability	SP13 acknowledges that it may be necessary to make commensurate, proposal-specific adjustments to affordable housing requirements to ensure development can be delivered with essential infrastructure. This includes meeting or exceeding the water efficiency standard, drainage strategies and SuDS, flood risk prevention (or adaptation / mitigation) and improvements to the strategic or local highways network. Our baseline appraisals include costs for all essential infrastructure with the exception of flood prevention, which is considered an abnormal cost and would therefore be reflected through an adjusted benchmark land value.
Policy H1: Specialist Housing for Older People	Policy H1 sets out the need and requirements for development proposals involving housing for older people. It states that where proposals contain C3 accommodation, affordable housing should be provided in line with Policy SP2. We have not been made aware of any specific sites which are expected to deliver older persons' accommodation, although one proposed site allocation indicates that the existing buildings may be suitable for conversion to this use. We have therefore developed generic typologies to test the viability of age-restricted accommodation and extra care facilities, including their ability to deliver affordable housing.

Policy	Implications and Assumptions for Viability Assessment
Policy SC1: Key Design Principles	Policy SC1 sets out how development should make a positive contribution by ensuring biodiversity, climate adaptation and mitigation measures are incorporated into design. The appraisals have included costs for 10% biodiversity net gain and the cost uplift advised in the Hastings Net Zero Policy evidence base.
Policy SC2: Housing mix, Accessibility and Adaptability	This policy sets out the requirement for new development to contribute to a mix of housing types and tenures to meet current and projected need. Proposals will be required to meet the Nationally Described Space Standards (NDSS), as well as certain thresholds for M4(2) and M4(3) accessibility standards. The typologies developed within the testing have been informed by the unit mixes set out in the latest HEDNA (2026), with NDSS compliant unit sizes. We have also included separate costs for compliance with M4(2) and M4(3) accessibility standards.
Policy SC3: Sustainable Design and Construction	SC2 sets out the approach to sustainable design and construction for new buildings, including connections to services, energy use and generation. It also requires proposals for residential development to be capable of achieving a maximum water usage of 100 litres per person per day. The appraisals include an additional cost of meeting the water efficiency standard on a per unit basis.
Policy SC10: Habitat Protection, Biodiversity and Net Gain	Policy SC10 states that development proposals will be required to demonstrate biodiversity net gain of 10%. As noted earlier, the appraisals include a fixed cost to meet this standard which has been varied by greenfield and brownfield sites.
Policy SC13: Urban Greening Factor	This policy requires that major development proposals must meet or exceed an Urban Greening Factor of 0.4 for residential proposals or 0.3 for commercial development. The appraisals have included a cost designed to meet the UGF requirements on relevant typologies.
Policy SC16: Flood Risk and Drainage	This policy sets out the need for risk assessments and management systems for flooding and drainage, including the need to incorporate Sustainable Drainage Systems (SuDS).

Policy	Implications and Assumptions for Viability Assessment
	It is assumed the cost of SuDS is captured within the external works allowance included in the appraisals.
Policy ID1: Planning Obligations (Section 106)	Policy ID1 seeks to ensure that the right infrastructure is in place at the right time to support development via planning obligations, S106 agreements, the use of the Infrastructure Delivery Plan and other mechanisms. The appraisals include S106 contributions which have been informed by information provided by the Council and varied subject to the size of the site. The contributions include those sought by Hastings Borough Council, including transport, open space, playing pitch, built facilities and police.

Community Infrastructure Levy

3.3 Hastings does not currently have an adopted CIL Charging Schedule. In conjunction with the expanded policy requirements in the emerging Local Plan, the viability assessment will also identify whether there is scope to introduce a CIL across Hastings for different types of development.

3.4 The combined costs of the updated policy requirements and CIL contributions will need to be balanced to ensure that development remains viable and deliverable. For example, if the Council wish to introduce a CIL charge, then this may need to be balanced against a reduced package of policy requirements (e.g. carbon reduction, affordable housing etc.). Conversely, if the updated policy requirements within the New Local Plan substantially increase the costs of development, then CIL rates may need to be adjusted to maintain viability.

3.5 This process is iterative and requires consideration for whether there is reasonable ‘headroom’ for CIL rates to be adjusted after the costs of meeting the new policy requirements have been reflected within the appraisal.

4 Viability Assessment Method

4.1 In this section of the report, we set out our methodology to establish the viability of the various land uses and development typologies adopted in the testing. We also set out the professional guidance that we have had regard to in undertaking the appraisals.

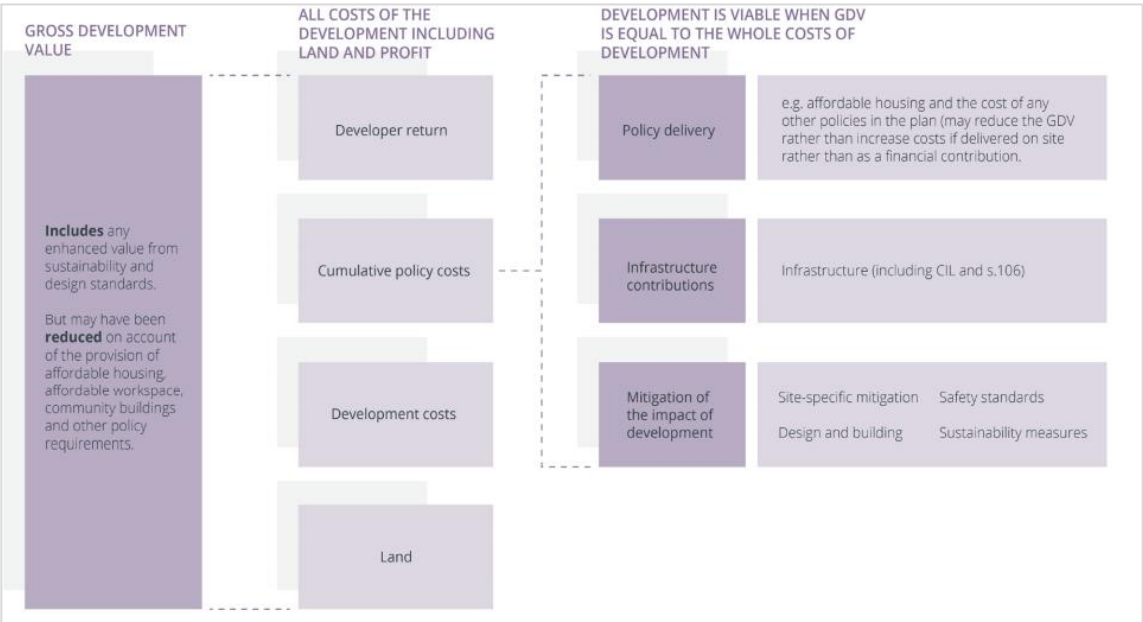
4.2 This section should be read in conjunction with the extracts highlighted in Section 2, specifically the Viability PPG and guidance in respect of the EUV, premium and profit.

Viability Modelling Best Practice

4.3 The general principle is that planning obligations including affordable housing (etc.) will be levied on the increase in land value resulting from the grant of planning permission. However, there are fundamental differences between the land economics of brownfield and greenfield sites and every development scheme is different. Therefore, in order to derive the potential planning obligations and determine the 'appropriate balance', it is important to understand the micro-economic principles which underpin the viability analysis.

4.4 The uplift in value is calculated using a residual land value (RLV) appraisal. The RLV is determined by deducting the total development costs from the gross development values generated on completion. Figure 4.1 illustrates the principles of an RLV appraisal.

Figure 4.1 - The Residual Land Valuation Framework

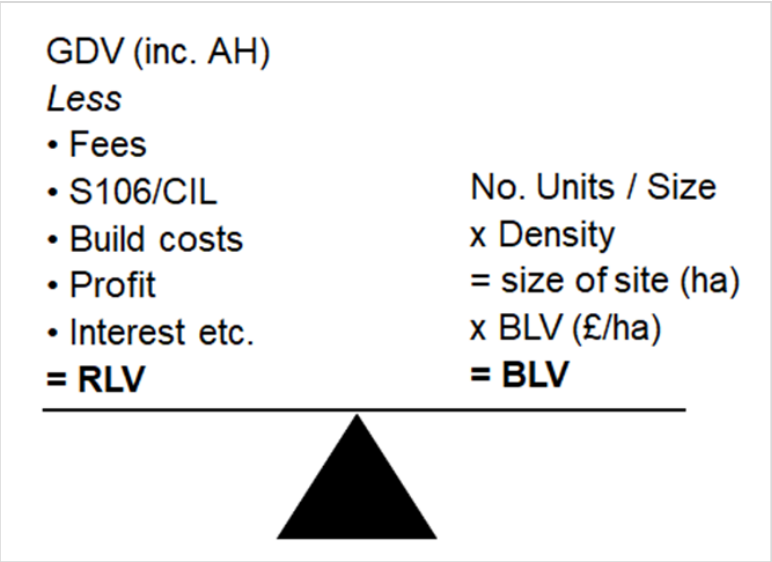


Source: RICS, April 2021.

4.5 In the diagram above, a scheme is viable if the Gross Development Value (GDV) is greater than the total of all the costs, including the land, development costs (base build costs, fees, contingencies), cumulative policy costs (inc. CIL) and a profit / return. Conversely, if the GDV is less than the total costs of development, the scheme will be unviable.

4.6 In circumstances where the GDV exceeds the total development costs, the resultant RLV is judged against a benchmark land value (BLV) to determine viability. This is illustrated in Figure 4.2.

Figure 4.2 - Balance between RLV and BLV



Source: AspinallVerdi ©.

4.7 If the balance is positive (i.e. the RLV meets or exceeds the BLV), then the cumulative policy requirements and CIL rates are viable. If the balance is negative (BLV > RLV), then the policies are not viable and may need to be reviewed.

What to Test?

4.8 For Local Plan viability assessments, it is not necessary to test every site expected to come forward for development. Instead, the testing can be based on collections of sites known as 'typologies' which are reflective of the development proposed over the plan period.

4.9 The typologies are to be based on the proposed development in the plan to ensure the testing represents the types of sites expected to come forward. In doing so, it is appropriate to consider:

> *'shared characteristics such as location, whether brownfield or greenfield, size of site and current and proposed use or type of development.'*[8]

4.10 Where there are key sites (strategic sites) that are fundamental to the delivery of the plan, these need to be considered separately. The PPG explains this as follows:

> *'Assessing the viability of plans* ***does not require individual testing of every site or assurance that individual sites are viable****. Plan makers can use site typologies to determine viability at the plan making stage. Assessment of samples of sites may be helpful to support evidence. In some circumstances a*

[8] Viability PPG, Paragraph 004.

> *more detailed assessment may be necessary* ***for particular areas or key sites on which the delivery of the plan relies.***[9]

4.11 The PPG considers key sites as those sites that are crucial to the delivery of the plan:

> *'…for example, large sites, sites that provide a significant proportion of planned supply, sites that enable or unlock other development sites or sites within priority regeneration areas.'*[10]

4.12 The process of how the typologies have been established is set out in Chapters 5 (residential) and 6 (non-residential). In this instance, we have been advised that there are no strategic sites expected to come forward during the emerging plan period.

Viability Appraisal Inputs

4.13 In devising the assumptions to adopt in the appraisals, the PPG explains it is acceptable to use standardised inputs, rather than relying on site-specifics:

> *'All viability assessments, including any undertaken at the plan-making stage, should reflect the recommended approach in national planning guidance, including* ***standardised inputs****, and should be made publicly available.'*[11]

Gross Development Value

4.14 The Gross Development Value (GDV) is the cumulative value of the completed development. This includes the sales or investment values generated by the disposal of completed market sale / build to rent units, transfer of affordable housing to registered providers, or income produced from the disposal of commercial uses. For plan-wide viability assessments:

> *'…****average figures*** *can be used,* ***with adjustment*** *to take into account land use, form, scale, location, rents and yields,* ***disregarding outliers in the data****.'*[12]

Development Costs

4.15 The PPG explains that development costs should also reflect local market conditions. It also emphasises the identification of development costs at the plan-making stage. Local market development costs could relate to dealing with local ground conditions, environmental mitigation, flood risk, design requirements, sustainability etc. The PPG states:

> *'As far as possible,* ***costs should be identified at the plan making stage****. Plan makers should identify where costs are unknown and identify where further viability assessment may support a planning application.'*[13]

[9] Viability PPG, Paragraph 003.
[10] Viability PPG, Paragraph 005.
[11] NPPF 2025, Paragraph 59.
[12] Viability PPG, Paragraph 012.
[13] Viability PPG, Paragraph 013.

4.16 In respect of the specific cost items, the PPG states:

'Costs include:

- ***build costs based on appropriate data, for example that of the Building Cost Information Service***
- *abnormal costs, including those associated with* ***treatment for contaminated sites*** *or listed buildings, or costs associated with brownfield, phased or complex sites.* ***These costs should be taken into account when defining benchmark land value***
- ***site-specific infrastructure costs,*** *which might include access roads, sustainable drainage systems, green infrastructure, connection to utilities and decentralised energy.* ***These costs should be taken into account when defining benchmark land value***
- *the* ***total cost of all relevant policy requirements including contributions towards affordable housing and infrastructure****, Community Infrastructure Levy charges,* ***biodiversity net gain*** *(as required by Schedule 7A of the Town and Country Planning Act), and any* ***other relevant policies or standards****. These costs should be taken into account when defining benchmark land value*
- *general* ***finance costs*** *including those incurred through loans*
- *professional, project management, sales, marketing and legal costs incorporating organisational overheads associated with the site.* ***Any professional site fees*** *should also be taken into account when defining benchmark land value*
- *explicit reference to* ***project contingency costs*** *should be included in circumstances where scheme specific assessment is deemed necessary, with a justification for contingency relative to project risk and developers return'*

Benchmark Land Value (BLV) Approach

4.17 The benchmark land value (BLV), previously referred to as the threshold land value (TLV), has been the subject of much debate. The concept of TLV was adopted by Harman in the 2012 report 'Viability Testing Local Plans, Advice for planning practitioners' (Local Housing Delivery Group), but we use the PPG terminology BLV herein. This has primarily concerned which method is most appropriate for determining the BLV/TLV for planning purposes. The two most common approaches have been:

- the 'Existing Use Value Plus Premium (EUV+)'; and,
- the 'Market Value adjusted for policy'.

4.18 The latter, although a more market-facing approach, has been criticised because practitioners have not been adjusting land values to reflect the implications of full policy

compliance.[14] The PPG now provides a clear method (Existing Use Value plus premium) for determining land value:

> *'To define land value for any viability assessment, a benchmark land value should be established on the basis of the* ***existing use value (EUV) of the land, plus a premium*** *for the landowner. The premium for the landowner should reflect the minimum return at which it is considered a reasonable landowner would be willing to sell their land. The premium should provide a reasonable incentive, in comparison with other options available, for the landowner to sell land for development while allowing a sufficient contribution to fully comply with policy requirements. Landowners and site purchasers should consider policy requirements when agreeing land transactions. This approach is often called 'existing use value plus' (EUV+)'*[15]

4.19 The PPG also sets out the factors that should be considered when establishing the land value:

- *'be based upon existing use value*
- *allow for a premium to landowners (including equity resulting from those building their own homes)*
- ***reflect the implications of abnormal costs; site-specific infrastructure costs; and professional site fees***

Viability assessments should be undertaken using benchmark land values derived in accordance with this guidance. ***Existing use value should be informed by market evidence of current uses****, costs and values.* ***Market evidence can also be used as a cross-check of benchmark land value but should not be used in place of benchmark land value****. There may be a divergence between benchmark land values and market evidence; and plan makers should be aware that this could be due to different assumptions and methodologies used by individual developers, site promoters and landowners.*

This evidence should be based on developments which are fully compliant with emerging or up to date plan policies, including affordable housing requirements at the relevant levels set out in the plan. ***Where this evidence is not available plan makers and applicants should identify and evidence any adjustments to reflect the cost of policy compliance****. This is so that historic benchmark land values of non-policy compliant developments are not used to inflate values over time.*

In plan making, the landowner premium should be tested and balanced against emerging policies. *In decision making, the cost implications of all relevant policy requirements, including planning obligations and, where relevant, any Community Infrastructure Levy (CIL) charge should be taken into account.'*[16]

4.20 The Royal Institute of Chartered Surveyors (RICS) also support the EUV+ method when determining land values for planning purposes. The RICS Assessing Viability in Planning under the National Planning Policy Framework, Professional Standard, March

[14] Sayce, S, et al, January 2017, Viability and the planning system: the relationship between economic viability testing, land values and affordable housing in London.
[15] Viability PPG, Paragraph 014.
[16] Viability PPG, Paragraph 015.

2021 states that *'the PPG is unambiguous that **EUV+ is the primary approach**.'* Land transaction evidence should only be used as a cross-check to the EUV plus premium.

4.21 The RICS Professional Standard emphasises Paragraph 016 of the Viability PPG, which states that:

> '*any data used should reasonably identify any adjustments necessary to reflect the cost of policy compliance (including for affordable housing), or differences in the quality of land, site scale, market performance of different building use types and reasonable expectations of local landowners'*[17].

4.22 The RICS defines the Existing Use Value as:

> '*… the value in the existing use, ignoring any prospect of future change to that use. This may however include permitted development or change of use within the same planning use class, but only where this does not necessitate any refurbishment or redevelopment works to the existing buildings or site works*.'[18]

4.23 The RICS International Valuation Standards, January 2022, defines EUV as:

> *'Current use/existing use is the current way an asset, liability, or group of assets and/or liabilities is used. The current use may be, but is not necessarily, also the highest and best use.'*[19]

Landowner Premiums

4.24 Despite the clarity the PPG and RICS Professional Standard bring, there is still uncertainty about how the premium element of the BLV is calculated. This was highlighted in the research report '*Viability and the planning system: the relationship between economic viability testing, land values and affordable housing in London'*[20], as set out below:

> *'Overall, the 'EUV plus' approach was favoured by the majority of respondents, despite the recognition that **the premium element can be difficult to assess** in some circumstances.'*

4.25 In this respect, the PPG explains:

> *'The premium should provide a reasonable incentive for a land owner to bring forward land for development while allowing a sufficient contribution to fully comply with policy requirements.*
>
> *Plan makers should establish a reasonable premium to the landowner for the purpose of assessing the viability of their plan. This will be an iterative process informed by professional judgement and must be based upon the best available evidence informed by cross sector collaboration.'*

4.26 In helping to inform the judgement, a balance needs to be struck between the competing interests (i.e. from developers, landowners and the aims of planning) *'to*

[17] Assessing viability in planning under the National Planning Policy Framework 2019 for England, Professional Standard, paragraph 5.7.6
[18] Ibid, paragraph B.1.2

secure maximum benefits in the public interest through the granting of planning permission.'

4.27 A number of reports have commented upon the critical issue of land value, as set out in Table 4.1. These inform the relationship between the 'premium' and 'hope value' (see below) in the context of market value. The PPG is explicit that hope value should be disregarded for the purposes of arriving at the EUV[21]. However, hope value is a fundamental part of the market mechanism and is therefore relevant in the context of the premium. In considering suitable premiums to apply, we are mindful of the sources and extracts set out in Table 4.1.

[21] Viability PPG, Paragraph: 015 Reference ID: 10-015-20190509, Revision date: 09 05 2019

Table 4.1 - Premium for BLV Considerations

Evidence / Source	Quote / Comments
RICS, Assessing Viability in Planning under the National Planning Policy Framework 2019 for England, March 2021 (effective from 01 July 2021)	The RICS acknowledge that *'there is no standard amount for the premium and the setting of realistic policy requirements that satisfy the reasonable incentive test behind the setting of the premium is a very difficult judgement'*.[22] The RICS guidance further explains that '*for a plan-making FVA, the EUV and the premium is likely to be the same for the same development typology, but it would be expected that a site that required higher costs to enable development would achieve a lower residual value. This should be taken account of in different site typologies at the plan-making stage*.'[23]
Local Housing Delivery Group Chaired by Sir John Harman, 20 June 2012, Viability Testing Local Plans, Advice for planning practitioners (The Harman Report)	The Harman Report was published in response to the introduction of viability becoming more prominent in the planning system following the introduction of the NPPF. The Harman report refers to the concept of 'Threshold Land Value' (TLV). Harman states that the '*Threshold Land Value should represent the value at which a typical willing landowner is likely to release land for development.*'[24] While this is an accurate description of the important value concept, we adopt the Benchmark Land Value (BLV) terminology throughout this report in line with that used in the PPG and RICS standards. Although the Harman Report pre-dates the current iteration of the PPG on viability, it does recommend the EUV plus approach to determine land value for planning purposes.

[22] RICS, March 2021 (effective from 01 July 2021), Assessing viability in planning under the National Planning Policy Framework 2019 for England, paragraph 5.3.3
[23] Ibid, paragraph 5.3.7
[24] Local Housing Delivery Group Chaired by Sir John Harman, 20 June 2012, Viability Testing Local Plans, Advice for planning practitioners, page 28

Evidence / Source	Quote / Comments
	The Harman report also advocates that when assessing an appropriate BLV, consideration should be given to '*the fact that future plan policy requirements will have an impact on land values and owners' expectations*.'[25] Harman does acknowledge that reference to market values will provide a useful 'sense check' on the BLV that are being used in the appraisal model; however, '*it is not recommended that these are used as the basis for input into a model*.'[26] It also acknowledges that for large greenfield sites, '*land owners are rarely forced or distressed sellers, and generally take a much longer term view over the merits or otherwise of disposing of their asset*.'[27] It refers to these 'prospective sellers' as '*potentially making a once in a lifetime decision over whether to sell an asset that may have been in the family, trust or institution's ownership for many generations*.'[28] In these circumstances, Harman states that '*the uplift to current use value sought by the landowner will invariably be significantly higher than in an urban context and requires very careful consideration.*'[29]
HCA Transparent Viability Assumptions (August 2010)	In terms of the EUV + premium approach, the Homes and Communities Agency (now Homes England) published a consultation paper on transparent assumptions for Area Wide Viability Modelling. This notes that *'typically, this gap or premium will be expressed as a percentage over EUV for previously developed land and as a multiple of agricultural value for greenfield land'.* It also notes that benchmarks and evidence from planning appeals tend to be in a range of '***10% to 30% above EUV*** *in urban areas. For greenfield land, benchmarks tend to be in a range of* ***10 to 20 times*** *agricultural value*'.[30]

Evidence / Source	Quote / Comments
Inspector's Post-Hearing Letter to North Essex Authorities	The Inspector's letter is in relation to, amongst other things, the viability evidence of three proposed garden communities in North Essex. The three sites would provide up to 43,000 dwellings in total. The majority of land is in agricultural use, and the Inspector recognised that the EUV for this use would be around £10,000 per gross acre. In this case, the Inspector was of the opinion that around a **x10 multiple** (£100,000 per gross acre) would provide sufficient incentive for a landowner to sell. But given '*the necessarily substantial requirements of the Plan's policies', a price 'below £100,000/acre could be capable of providing a competitive return to a willing landowner'*.[31] The Inspector, however, judged that '*it is extremely doubtful that, for the proposed GCs, a land price below £50,000/acre – half the figure that appears likely to reflect current market expectations – would provide a sufficient incentive to a landowner. The margin of viability is therefore likely to lie somewhere between a price of £50,000 and £100,000 per acre*.'[32]
Parkhurst Road v SSCLG & LBI (2018)[33]	The High Court case between Parkhurst Road Limited (Claimant) and Secretary of State for Communities and Local Government and The Council of the London Borough of Islington (LBI / Defendant(s)) addresses the issue of land valuation and the circularity of values which are not appraised on a policy compliant basis. In this case, it was common ground that the existing use was redundant and so the existing use value ("EUV") was "negligible". There was no alternative form of development which could generate a higher value for an alternative use ("AUV") than the development proposed by Parkhurst. The site did not suffer from abnormal constraints or costs. LBI contended that there was considerable "headroom" in the valuation of such a site enabling it to provide a substantial amount of affordable housing in accordance with policy requirements. Furthermore, the achievement of that objective was being frustrated by Parkhurst's use of a 'greatly inflated' BLV for the site which failed properly to reflect those requirements. Mr Justice Holgate dismissed the challenge and agreed with LBI that what is to be regarded as comparable

	market evidence, or a "market norm", should "reflect policy requirements" to avoid the "circularity" problem[34].
Land Value Capture report (Sept 2018)[35]	The House of Commons - Housing, Communities and Local Government Committee has published a report on the principles of land value capture. This defines land value capture, the scope for capturing additional land value and the lessons learned from past attempts to capture uplifts in land value. It reviews improving existing mechanisms, potential legislative reforms and alternative approaches to land value capture. Paragraph 109 of the report states, *'[…] the extent to which the 'no-scheme' principle would reduce value "very much depends on the circumstances". For land in the middle of the countryside, which would not otherwise receive planning permission for housing, the entire development value could be attributed to the scheme. However, […] most work was undertaken within constrained urban areas—such as town extensions and redevelopments—where the hope value was much higher'*. Hence it is important to consider the policy context for infrastructure and investment when considering land values. For example, where existing agricultural land in the green belt is being considered for housing allocations, the entire uplift in value is attributable to the policy decision (without which there can be no development).
Land at Warburton Lane, Trafford (Appeal Ref: APP/Q4245/W/19/3243720)[36]	Planning appeal for up to 400 dwellings, appeal dismissed. The Inspector preferred the Council's approach to land value. The Council used an agricultural land value of £8,000 per acre. They applied a x10 premium to the net developable area of 33.75 acres and £8,000 per acre to the remainder of the site. The total BLV of £2,900,000. The total site area was 62 acres (25 hectares). The BLV equated to £116,000 per gross hectare (£46,945 per gross acre) / x5.87 multiplier on the agricultural land value of £8,000 per acre. In considering the premium the Inspector noted that, '*there is no evidence that I have seen that says the premium should be any particular value. The important point is that it should be sufficient to incentivise the*

	landowner to sell the land and should also be the minimum incentive for such a sale to take place'.[37] It was relevant to note that, '*in this case one of the two landowners had agreed in the option agreement to sell the land for whatever is left after a standard residual assessment'*[38] and therefore had accepted lower minimum / BLV requirements.
Mayor of London CIL (Jan 2012)	The impact on land value of future planning policy requirements e.g. CIL [or revised Affordable Housing targets] was contemplated in the Examiner's report to the Mayor of London CIL (January 2012).[39] Paragraph 32 of the Examiner's report states: *'the price paid for development land may be reduced. As with profit levels there may be cries that this is unrealistic, but a* ***reduction in development land value is an inherent part of the CIL concept****. It may be argued that such a reduction may be all very well in the medium to long term but it is impossible in the short term because of the price already paid/agreed for development land. The difficulty with that argument is that if accepted the prospect of raising funds for infrastructure would be forever receding into the future....'* It was recognised in 2012 (which was at a time of similarly challenging economic circumstances post-credit-crunch as it is currently) that land values would have to soften to allow the necessary infrastructure to be delivered in accordance with public policy.
Greater Norwich CIL (Dec 2012)	The Greater Norwich Development Partnership's CIL Examiner's report adds to this - *'Bearing in mind that the cost of* ***CIL needs to largely come out of the land value,*** *it is necessary to establish a threshold land value i.e. the value at which a typical willing landowner is likely to release land*

[40] Report to the Greater Norwich Development Partnership – for Broadland District Council, Norwich City Council and South Norfolk Council, by Keith Holland BA (Hons) Dip TP, MRTPI ARICS, 4 December 2012, File Ref: PINS/G2625/429/6 – paragraph 9

[41] Report to Sandwell Metropolitan Borough Council by Diana Fitzsimons MA MSc FRICS MRTPI an Examiner appointed by the Council, 16 December 2014, File Ref: PINS/G4620/429/9 - paragraph 16

4.28 In light of the conclusions of various Examiners' reports, such as those highlighted in Table 4.1, it becomes evident that landowners must revise their expectations of land value for schemes to be both viable and deliverable, particularly in the context of providing affordable housing.

4.29 Paragraph 32 of the Mayor of London CIL Examiner's report explicitly acknowledges that the price of development land may need to decrease, emphasising that this reduction is intrinsic to the land value capture concept. Similarly, the Greater Norwich Development Partnership's CIL Examiner's report underscores the necessity of establishing a threshold / benchmark land value, which is derived from a reasonable reduction in values to ensure viability - a factor crucial for meeting affordable housing targets. These findings collectively emphasise the importance of land value adjustments to facilitate the realisation of development schemes, including those aimed at providing policy-compliant levels of affordable housing.

Development Land Market in Practice

4.30 An important aspect when considering area-wide viability is an appreciation of how the development land market works in practice. Typically, developers secure sites in a competitive market and are required to match or exceed a landowner's perceived value or worth to release the site for development. The exact acquisition price can often be agreed via negotiations which take place many years before planning is granted and development has commenced. This approach means the developer assumes all the risk of acquiring the site, obtaining planning permission, funding the development, finding tenants / occupiers / end users, increases in construction costs, and changes to the economy and market demand etc. This is a significant amount of work for the developer to manage, and so the reward of assuming this risk is delivered by a profit at the back end.

4.31 To mitigate some of these risks, developers and landowners often enter into arrangements such as 'subject to planning' purchases, promotion agreements, and / or overage agreements, whereby the developer shares any 'super-profit' over the normal benchmark with the landowner.

4.32 From the landowners' perspective, they will have a preconceived concept of the value or worth of their site. This could be fairly straightforward, for example, in the case of greenfield agricultural land which is subject to price-per-hectare benchmarks. However, in the case of brownfield sites, the existing use value could vary substantially subject to:

- the previous use of the property;
- the condition of the premises;
- contamination and need for remediation; and/or,
- any income from temporary lets, car parking and advertising hoardings.

4.33 For brownfield sites, there may also be a reluctance from the landowner to accept / reconcile any discounts arising due to depreciation or obsolescence of a building which was originally purchased as a 'state of the art' facility. For example, a former manufacturing building may have reached the end of its economic lifespan, but the landowner may be reluctant to accept any depreciation as a result of changes in the

market. Accordingly, the existing use value is much more subjective in a brownfield context.

Brownfield / Greenfield Land Economics

4.34 The introduction of the Community Infrastructure Levy, as a mandatory development contribution, stems from the perceived windfall profit arising from the release of greenfield land by the planning system.[42] However, lessons from previous attempts to levy a tax on betterment / uplifts[43] show that this is difficult to achieve effectively without hindering development and housing delivery. It is even harder to apply the concept to brownfield redevelopment schemes with all attendant costs and risks. The difference between greenfield and brownfield scheme economics is important to understand when determining affordable housing targets; plan viability, and CIL rate setting.

4.35 The timing of redevelopment and regeneration of brownfield land is determined by the relationship between the value of the site in its current use ("Existing Use Value") and the value of the site in its redeveloped form – less the costs of redevelopment. Any planning gain which impacts these costs will affect the timing of redevelopment. This is relevant to consider when setting the 'appropriate balance'.

4.36 Fundamentally, S106, CIL etc. is a form of 'tax' on development as a contribution to infrastructure. By definition, any differential rate of CIL / S106 will have a distorting effect on the pattern of land uses. The question as to how this will distort the market will depend upon how the S106 / CIL is applied.

4.37 Also, consideration must be given to the incidence of the tax. Whilst it may be deemed the developer's responsibility to make contributions or payments to the Local Planning Authority, these may have been made feasible through negotiations with the landowner via a reduced land value (or shared between the two parties). This is particularly relevant in the context of brownfield sites in town centres and built-up areas. Any S106 / CIL on brownfield redevelopment sites will impact the timing and rate of redevelopment. This will have a direct effect on economic development, jobs and growth.

4.38 In the brownfield context, redevelopment takes place at a point in time when buildings are economically obsolete (as opposed to physically obsolete). Over time, the existing use values of buildings fall as the operating costs increase, depreciation kicks in and rents fall by comparison with modern equivalent buildings. In contrast, the value of the next-best alternative use of the site increases over time due to development pressure (assuming there is general economic growth in the economy). Physical obsolescence occurs when the decreasing existing use value crosses the rising alternative use value.

4.39 However, this is not the trigger for redevelopment. Redevelopment requires costs to be incurred such as on-site demolition, clearance, remediation, and new build construction costs. These costs have to be deducted from the alternative use value 'curve'. The effect is to extend the time to achieve the point where redevelopment is viable.

[42] See Barker Review (2004) and Housing Green Paper (2007)
[43] the 2007 Planning Gain Supplement, 1947 'Development Charge', 1967 'Betterment Levy' and the 1973 'Development Gains Tax' have all ended in repeal

4.40 This is fundamental for the viability and redevelopment of brownfield sites. Any tariff, tax or obligation which increases the costs of redevelopment will depress the net alternative use value and simply extend the timescale to when the alternative use value exceeds the existing use value to precipitate redevelopment.

4.41 Contrast this with the situation for development on greenfield land. Greenfield sites are constrained by the planning designation. Once a site is 'released' for development there is usually a significant step-up in development value, which makes the development economics much more accommodating than brownfield redevelopment. There is much more scope to capture development gain, without postponing the timing of development.

4.42 That said, there are some other important considerations to take into account when assessing the viability of greenfield sites. This is discussed in the Harman Report (albeit Harman is superseded by the PPG, the principles still stand)[44].

4.43 The existing use value may be only very modest in agricultural use, and the landowner may therefore appear to make a substantial windfall in the uplift to residential land values. This is particularly relevant where a landowner *'is potentially making a once in a lifetime decision over whether to sell an asset that may have been in the family, trust or institution's ownership for many generations.'*[45] Accordingly, the 'windfall' over the existing use value will have to be a sufficient incentive to release the land and forgo future investment returns.

4.44 Another consideration is the promotional cost of strategic greenfield sites. As an example, for larger-scale urban extension sites and garden communities, there will be a requirement for the investment of time and resources to promote these sites through the plan process. The BLV therefore needs to consider the often-substantial planning promotion costs, option fees, and the return required by the promoters of such sites. *'This should be borne in mind when considering the [benchmark] land value adopted for large sites and, in turn, the risks to delivery of adopting too low a [benchmark] that does not adequately and reasonably reflect the economics of site promotion…'* [46]

4.45 This difference between the development 'gain' in the context of a greenfield windfall site and the slow-burn redevelopment of brownfield sites is fundamental to the success of any regime to capture development gains such as affordable housing, other S106 or CIL. It is also key to the aforementioned incidence of the tax (e.g. who ultimately carries the cost burden).

4.46 In Hastings, the sites expected to come forward are a mix of both brownfield and greenfield, albeit there is a significantly higher proportion of the former. We have therefore appraised both greenfield and brownfield scheme typologies, but recognise that the delivery of policy requirements may be influenced by some of the development

[46] Local Housing Delivery Group, Local Government Association / Home Builders Federation / NHBC (20 June 2012) Viability Testing Local Plans, Advice for planning practitioners, Edition 1 (the 'Harman' report) page 31

land economics identified in this chapter, particularly those sites which are previously developed.

Hope Value

4.47 Where there is a possibility of development, the landowner will often have regard to 'hope value'. Hope value is the *element of* market value in excess of the existing use value, reflecting the prospect of a more valuable future use(s) or redevelopment. It takes account of the uncertainties or extent of such prospects, including the time which would elapse before one could expect planning permission to be obtained, or any relevant constraints overcome, to enable the more valuable use to be implemented.

4.48 In a rising market, landowners may often have high aspirations of value beyond that which the developer can justify in terms of risk. In a falling market, the landowner may simply 'do nothing' and not sell the site in anticipation of a better market returning in the future.

4.49 Note that hope value is represented in the landowner premium in the EUV+ approach, and can never be in excess of policy-compliant market value (i.e. the RLV assuming all policy costs and contributions are delivered), given RICS guidance on the valuation of development sites (see Figure 4.1 - The Residual Land Valuation Framework above).

4.50 Hence land 'value' and 'price' are two very different concepts which need to be understood fully when formulating planning policy and CIL. The incidence of any S106 tariff or CIL depends on this relationship and the individual circumstances. For example, a farmer with a long-term greenfield site might have limited 'value' aspirations for agricultural land – but huge 'price' aspirations for residential development. Whereas an existing factory owner has a much higher value in terms of sunk costs and investment into the existing use, and the tipping point between this and redevelopment is much more marginal.

Vacant Building Credit (VBC)

4.51 The VBC policy is intended to incentivise brownfield development, including the reuse or redevelopment of empty and redundant buildings. The incentive is applied where a vacant building is brought back into any lawful use or is demolished to be replaced by a new building and where the building has not been abandoned.

4.52 For this viability assessment, we have not tested brownfield typologies which benefit from Vacant Building Credit as this is a site-specific consideration. The inclusion of VBC will however, reduce affordable housing requirements on some brownfield sites, consequently improving viability. This is therefore an additional level of contingency for brownfield typologies which should be considered in our recommendations.

Conclusions and Caveats on BLV

4.53 Current guidance is clear that the land value assessment needs to be based on the Existing Use plus Premium method and not a Market Value approach. Although the assessment of the Existing Use can be informed by comparable evidence, the uncertainty lies in how the premium is calculated. Whatever the resulting land value, the PPG is clear that this must reflect the cost of complying with policies:

> '*the total cost of all relevant policy requirements including contributions towards affordable housing and infrastructure, Community Infrastructure Levy charges, and any other relevant policies or standards. These costs should be taken into account when defining benchmark land value.*'[47]

4.54 In support of this assessment, we have produced a Land Market Paper which provides detailed research and analysis in respect of land values. Please refer to Appendix 2 for further information.

4.55 It is important to note that the BLVs set out within this report are for 'high-level' plan / CIL viability purposes and the appraisals should be read in the context of the BLV sensitivity table (contained within the appraisals). The BLVs adopted in our assessment are generic and include premiums to provide a viability buffer for plan-making purposes.

4.56 In the majority of circumstances, we would expect the RLV of a scheme on a policy-compliant basis to be greater than the EUV (and also the BLV including premium) and therefore viable. However, there may be site-specific circumstances which result in an RLV which is less than the BLV (e.g. sites with challenging demolition, contamination or other constraints). It is important to emphasise that the adoption of a particular BLV in this assessment does not imply that this figure can be used by Applicants to negotiate site-specific planning applications where these constraints exist. In these circumstances, the site-specific BLV should be thoroughly evidenced having regard to the EUV of the site in accordance with the PPG. This report is for plan-making purposes and is without prejudice to future site-specific planning applications.

How to Interpret the Viability Appraisals

4.57 In development terms, the price of a site is determined by the residual land value (RLV). The RLV is calculated by taking the gross development value of the site (GDV) and deducting ALL costs, including planning policy requirements and developers' profit. If the RLV is positive, the scheme is viable. If the RLV is negative, the scheme is not viable.

4.58 Part of the skill of a developer is to identify sites that are in lower value economic uses and purchase these sites to develop them into higher value uses. The landowner then has a choice - to sell the site or not, depending on their circumstances. Historically (pre-credit-crunch and prior to the 2012 version of the NPPF), this would be left to 'the market' and there would be no role for planning in this mechanism.

4.59 However, since this time, planning policy has sought to intervene in the land market by requiring that a 'benchmark' land value (BLV) is achieved as a 'return to the landowner'. This left Local Authorities open to negotiations to reduce affordable housing and other contributions on viability grounds, which sets up a powerful force of escalating land values and is prejudicial to delivery in the long term. The latest iterations of the NPPF and PPG are seeking to redress this.

4.60 In planning viability terms, for a scheme to come forward for development, the RLV has to exceed the landowner's BLV. In development management terms, every scheme will be different (RLV) and every landowner's motivation will be different (BLV).

[47] MHCLG, 24 July 2018, PPG, Paragraph: 012 Reference ID: 10-012-20180724

4.61 For plan-making purposes, it is important to benchmark the RLVs from the viability analysis against the BLV – see Figure 4.2 for a visual representation of this concept. The results of the appraisals should therefore be interpreted as follows:

- If the 'balance' is positive (RLV > BLV), then the delivery of the cumulative policy requirements and CIL is viable. We describe this as **being 'viable for plan-making purposes herein'**.
- If the 'balance' is negative (RLV < BLV), then the delivery of the policy requirements and CIL is **'not viable for plan-making purposes**' and the planning obligations and / or affordable housing targets should be reviewed.
- Thirdly, if the RLV is positive, but the appraisal is not viable due to the BLV assumed – we refer to this as being **'marginal'**. In this case, more scrutiny may be required of the BLV, profit levels and policy requirements (through the sensitivity analysis).

4.62 We demonstrate the concepts above and interpretation of the appraisals by way of example. Please note that the appraisal shown and discussed in the following paragraphs / figures is hypothetical and for demonstration purposes only. For the avoidance of doubt, it does not show the outcome of any typologies tested as part of this viability assessment.

4.63 Figure 4.3 shows an extract from a development appraisal that generates an RLV of £2,441,938. This is also calculated on a per acre basis as £2,635,304, and can be seen in the two cells highlighted blue.

Figure 4.3 - Example Appraisal

RESIDUAL LAND VALUE (RLV)								
Residual Land Value (gross)								2,843,788
SDLT			2,843,788	@	HMRC formula			(131,689)
Acquisition Agent fees			2,843,788	@	1.0%			(28,438)
Acquisition Legal fees			2,843,788	@	0.5%			(14,219)
Interest on Land			2,843,788	@	8.00%			(227,503)
Residual Land Value								**2,441,938**
RLV analysis:	16,280	£ per plot	6,511,836	£ per ha (net)	2,635,304	£ per acre (net)		
			6,511,836	£ per ha (gross)	2,635,304	£ per acre (gross)		
					6.76%	% RLV / GDV		
BENCHMARK LAND VALUE (BLV)								
Residential Density			400.0	dph (net)				
Site Area (net)			0.38	ha (net)	0.93	acres (net)		
Net to Gross ratio			100%					
Site Area (gross)			0.38	ha (gross)	0.93	acres (gross)		
Density analysis:			28,235	sqm/ha (net)	122,996	sqft/ac (net)		
			400	dph (gross)				
Benchmark Land Value (net)	15,444	£ per plot	6,177,500	£ per ha (net)	2,500,000	£ per acre (net)		**2,316,563**
BLV analysis:			6,177,500	£ per ha (gross)	2,500,000	£ per acre (gross)		
BALANCE								
Surplus/(Deficit)			**334,336**	£ per ha (net)	**135,304**	£ per acre (net)		**125,376**

Source: AspinallVerdi BETA model.

4.64 The assumed BLV is £2,500,000 per acre and is highlighted in green. This equates to £2,316,563 based on the site area of 0.93 acres. As established earlier, the difference between the RLV and BLV will either be positive (surplus) or negative (deficit). In this example, a total surplus of £125,376 is generated (equivalent to £135,304 per acre - highlighted orange). Accordingly, in this particular example, the delivery of the policy contributions included within the model is viable, as the values exceed the costs (including the benchmark land value).

Sensitivity Analysis

4.65 In addition to the above, we have also prepared a series of sensitivity scenarios for each of the typologies. This is to assist in the analysis of our assessment and to demonstrate how the outcome may change in response to variable cost and value assumptions (e.g. sales values, rents, build costs, land values, profit etc.). An example of a sensitivity appraisal is shown below and will be found at the bottom of the appraisals undertaken for Hastings. As with the example appraisal above, the sensitivity analysis considered below does not show the outcome of any typologies tested as part of this viability assessment.

Figure 4.4 - Example Affordable Housing v CIL Sensitivity Analysis

Balance (RLV - BLV £ per acre (n))	135,304	10%	15%	20%	25%	30%	35%
	0.00	2,333,704	2,011,121	1,688,539	1,365,663	1,042,752	719,841
	10.00	2,244,520	1,926,892	1,609,111	1,291,166	973,222	655,277
CIL £ psm	20.00	2,155,337	1,842,626	1,529,648	1,216,670	903,692	590,713
90.39	30.00	2,066,154	1,758,197	1,450,185	1,142,173	834,162	526,150
	40.00	1,976,813	1,673,768	1,370,722	1,067,677	764,632	461,477
	50.00	1,887,417	1,589,338	1,291,259	993,180	695,102	396,747
	60.00	1,798,021	1,504,909	1,211,796	918,684	625,492	332,018
	70.00	1,708,626	1,420,480	1,132,334	844,188	555,783	267,289
	80.00	1,619,230	1,336,050	1,052,871	769,591	486,075	202,559

	110.00	1,351,043	1,082,684	814,106	545,528	276,950	8,372

Source: AspinallVerdi.

4.66 This sensitivity table shows how the viability surplus or deficit can change in response to variations in the affordable housing contribution (see horizontal rows across the top) and CIL contributions (see vertical rows to the left). This allows us to understand:

- The appraisal balance by looking up the base case AH% (e.g. 35%) and the base case CIL (e.g. £90.39 psm – between £90 and £100 psm).
- Higher % levels of CIL will reduce the 'balance'. If the balance is negative (i.e. BLV > RLV), then the scheme is 'not viable' for plan-making purposes.
- Similarly, higher levels of AH (%) will reduce the 'balance'.
- Conversely, we can see that if the affordable housing percentage is reduced then the balance increases. For example, a 10% affordable housing contribution with no CIL would increase the net difference between the RLV and BLV to £2.33m (red dotted line).

4.67 The sensitivity tables included within our appraisals consider how this balance changes in response to the following adjustments:

- Table 1 – CIL v Affordable Housing %
- Table 2 – Site Specific S106 v Affordable Housing %
- Table 3 – Profit v Affordable Housing %
- Table 4 – BLV v Affordable Housing %
- Table 5 – Net Zero Costs v Affordable Housing %
- Table 6 – Build Cost v Affordable Housing %
- Table 7 – Market Values v Affordable Housing %
- Table 8 – Grant v Affordable Housing %

Stakeholder Engagement

4.68 On the 24th July 2026, AspinallVerdi hosted a stakeholder consultation event which set out our approach to viability testing and the emerging assumptions for residential and commercial development respectively. The workshop was hosted online via Microsoft Teams, with invitations circulated amongst relevant departments of the Council, local developers, landowners, promoters, consultants and registered providers, with a total of 6 attendees. A copy of the slides is provided in Appendix 3.

4.69 Following the workshop, we invited further information and evidence to be submitted in writing. Feedback was received from 3 separate parties, which has since been reviewed and collated in our feedback matrix in Appendix 4. The submissions received have resulted in changes to the original appraisal assumptions, as set out below:

- **Sales Rates** – feedback was received with supporting evidence to demonstrate the sales rates which have been experienced at national and regional level in recent years. This has been considered and adjustments have been made so that the rates are commensurate with the averages, whilst also taking a broader view over a plan period.
- **Office Rents** – feedback and evidence were received in regards to the proposed commercial rental values for office uses. This has been reviewed and adjustments have been made to lower the originally proposed values.

4.70 Our full responses are provided in Appendix 4.

5 Residential Typologies & Assumptions

5.1 As established earlier, for plan-wide viability assessment it is not necessary to test every site expected to come forward for development. Instead, the testing can be based on groups of sites known as 'typologies' which are reflective of the development proposed over the plan period. Typologies can be formed by grouping sites with shared characteristics. In doing so, it is appropriate to consider:

> *'location, whether brownfield or greenfield, size of site and current and proposed use or type of development.'*[48]

5.2 This is supported in the RICS Professional Standard which explains that:

> *'development typologies should be representative of the development that is planned and reflect the characteristics of groups of sites identified in the proposed land supply. These typologies will be a combination of site typologies (e.g. greenfield or brownfield) and scheme typologies (e.g. houses or flats for sale or build to rent, other specialist housing, and commercial or mixed-use schemes).'*[49]

5.3 Where there are key sites (strategic sites) that are fundamental to the delivery of the plan, these need to be considered separately. The PPG explains this as follows:

> *'Assessing the viability of plans **does not require individual testing of every site or assurance that individual sites are viable**. Plan makers can use site typologies to determine viability at the plan making stage. Assessment of samples of sites may be helpful to support evidence. **In some circumstances a more detailed assessment may be necessary for particular areas or key sites on which the delivery of the plan relies.**'*[50]

5.4 We understand that none of the sites being considered as part of the plan making process are deemed strategic, however owing to the characteristics of Hastings as an authority area and the nature of planned development sites, some larger sites have been tested individually by default. Similarly, due to the variation in some of the smaller sites submitted by the Council, some have been tested on an individual basis as they demonstrate unique characteristics which were not shared or common with other sites within the plan or appropriate for grouping into typologies.

5.5 To ensure the testing is reflective of other site sizes and capacities which are not accounted for within the list provided by the Council, we have also devised hypothetical typologies to ensure an even spread of site and development types across the Borough.

5.6 The following analysis is tabulated in our Typologies Matrix in Appendix 5.

Approach to setting Typologies

5.7 The residential typologies are developed through our analysis of the following characteristics / key factors:

[48] Viability PPG, Paragraph 004.
[49] RICS, March 2021. Assessing viability in planning under the National Planning Policy Framework 2019 for England, paragraph 3.3.6
[50] Viability PPG, Paragraph 005.

- **Variation of sales values across the Borough (Value Zones)** – based on the detailed analysis undertaken in the Residential Market Report in Appendix 6. This is to establish whether the testing can be varied to reflect different sales values / market areas. The RICS explain *'Since value is often highly location-dependent, assessors should identify the high- and low-value locations within a plan area. Area wide assessments should test typologies in different value bands to reflect value variations within an LPA area based on the available evidence.'*[51]
- **Pattern of proposed development within the plan** - referenced back to the analysis of sales values to assess whether sites are coming forward in single or multiple areas of value – this is to support the variance of testing by market areas.
- **Site characteristics** – greenfield/brownfield, number of units and development density cross-referenced with values. This is to allow the testing to be varied by land use type, size and density – all of which influence development economics.
- **Dwelling types and unit mix** – here we consider the Borough's need for market and affordable tenures and the type of housing, as well as the type of development that has been delivered in recent years (as per our market review).

5.8 Although we have set out the analysis in stages, in reality, there have been multiple iterations to determine and agree the final typologies used in the testing. In establishing the typologies, we have also been mindful that they represent the '*majority of the unconsented land supply that is likely to come forward for development during the policy period under consideration.*'[52]

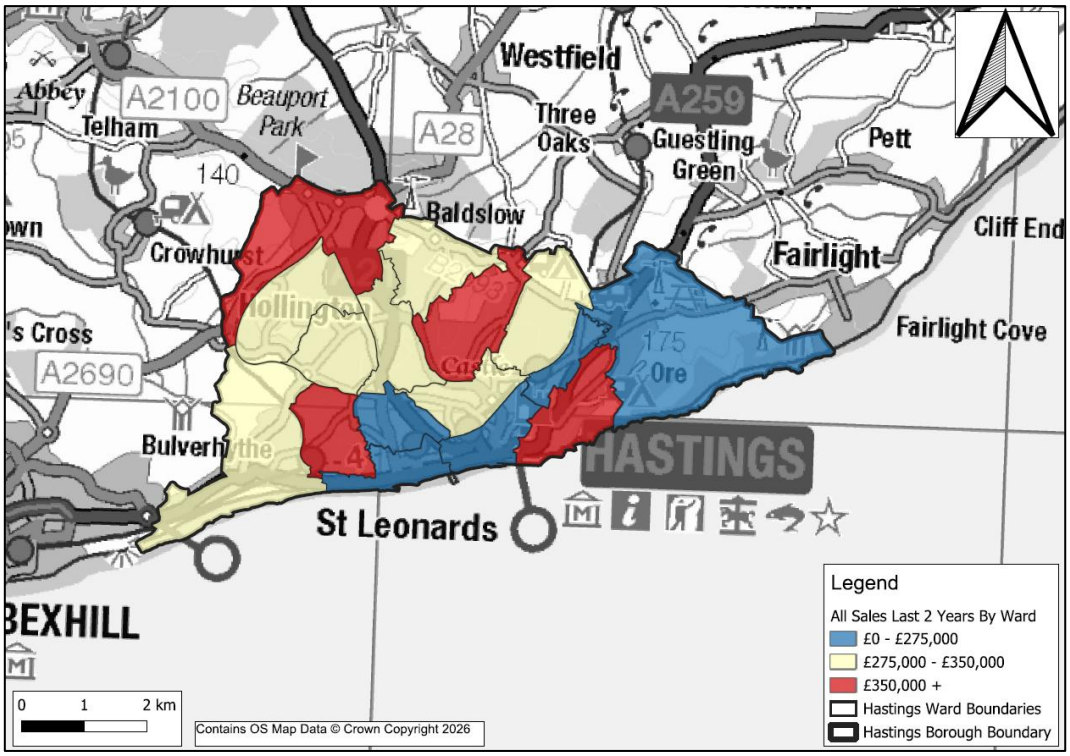
5.9 We note that there are no sites submitted for consideration as part of the plan-making process which specify the provision of specialist types of residential accommodation, notably older persons' housing and build-to-rent. Accordingly, we have instead developed 'generic' typologies based on the typical expectations of these types of housing developer / provider.

Establishing the Value Zones

5.10 In determining the residential typologies, the guidance allows us to vary the viability testing by value zone. We have considered new-build sold prices of schemes across Hastings including an analysis of individual unit prices, sizes and £ / psm rates (Figure 5.1). We have also sought second-hand achieved values and considered data from properties currently advertised for sale. Based on our residential market review, we have devised three value zones, as shown in Figure 5.2.

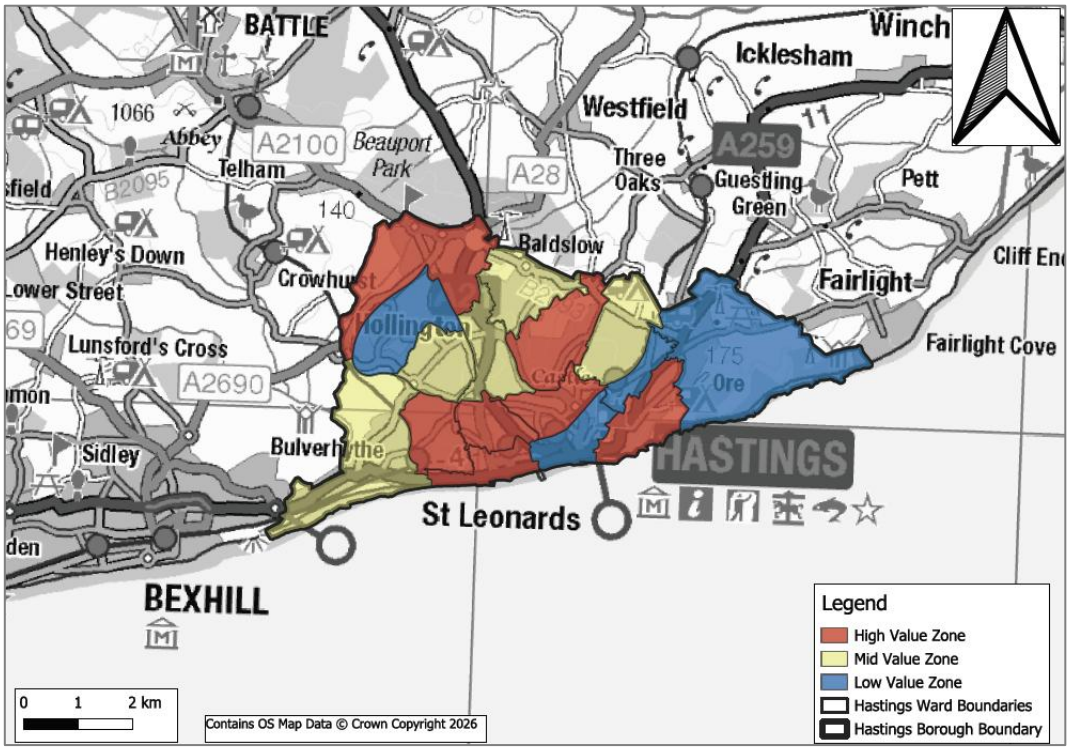
[51] RICS, March 2021. Assessing viability in planning under the National Planning Policy Framework 2019 for England, paragraph 4.2.8
[52] Local Housing Delivery Group Chaired by Sir John Harman, 20 June 2012. Viability Testing Local Plans, Advice for planning practitioners.

Figure 5.1 – Hastings Value Heat Map by Ward



Source: QGIS, 2026.

Figure 5.2 – Hastings Proposed Value Zones



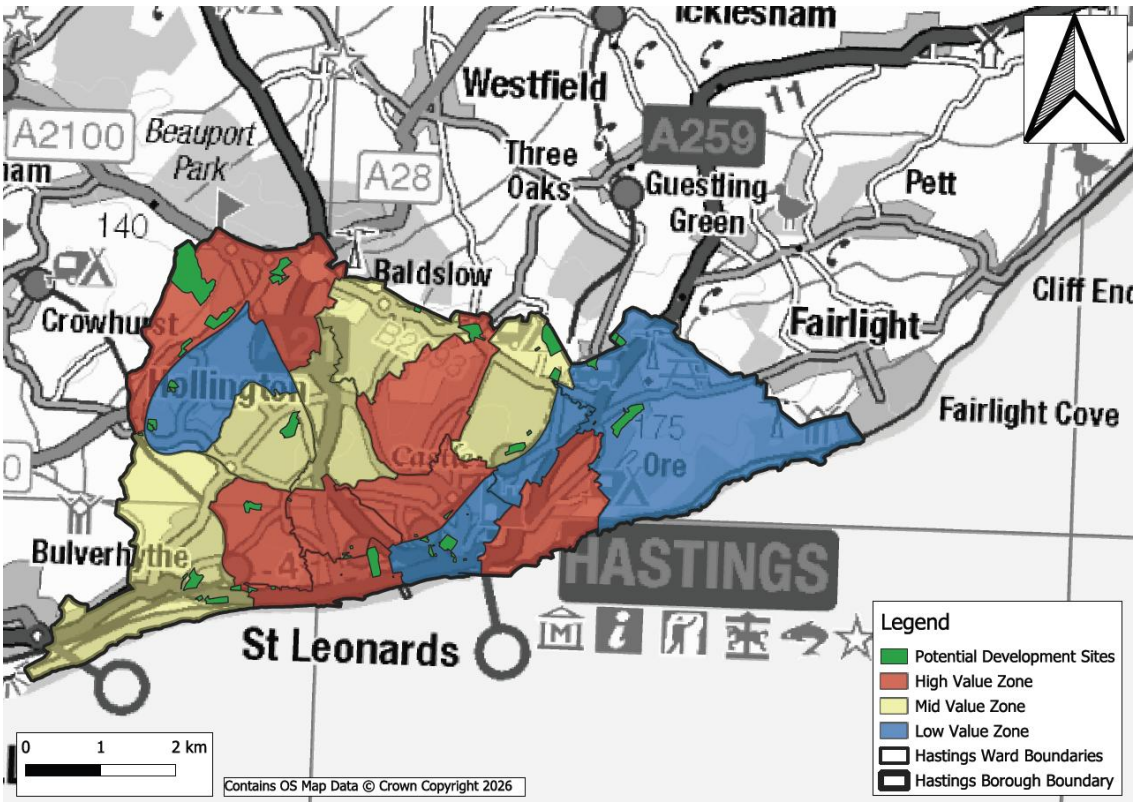
Source: QGIS, 2026.

5.11 The final value zones are a comprehensive analysis of achieved prices, £ / psf rates and the relative variation across ward boundaries. We have also been mindful of the type of accommodation that has been, and is likely to be, delivered in different locations across the authority area (e.g. flats vs. houses).

Pattern of Proposed Development

5.12 The starting point was to consider the list of sites provided by the Council, which have been overlaid onto the map showing the proposed value zones to ensure the typologies can be varied on this basis (i.e., higher / mid / lower value areas), as shown in Figure 5.3. Please note, this terminology is used to describe the variation in values within Hastings Borough, and does not consider how values compare more broadly at a regional or national scale. As a relatively small authority area, the variation in values is considered more limited in Hastings. The wards allocated within each value zone are summarised in Table 5.1.

Figure 5.3 – Pattern of Development



Source: QGIS, 2026.

Table 5.1 – Wards by Value Zone

HDC Zone	Wards
Lower Value	Hollington, Castle, Tressell and Ore
Middle Value	West St. Leonards, Wishing Tree, Silverhill, Conquest and Baird.

HDC Zone	Wards
Higher Value	Old Hastings, St. Helen's, Braybrooke, Gensing, Central St. Leonards, Maze Hill and Ashdown.

Source: AspinallVerdi, 2026.

5.13 The map shows that the majority of sites fall within the lower value zone. Those in the lower value zone generally appear smaller in size and capacity.

5.14 In the process of forming our typologies, we have distilled the analysis to identify whether the potential development sites are brownfield or greenfield, as summarised in Table 5.2. This table reflects a broader list of potential development sites under consideration as part of the plan-making process for residential-led development. This longlist has been, and will continue to be, progressively refined as the plan progresses, and therefore does not represent the finalised allocations or capacities. However, this consideration of the longer list of sites ensures that the typologies are representative of those which will ultimately be included in the final plan.

Table 5.2 – Hastings Borough Council Site List Analysis

Value Zone	Type	No. Sites	% Share	Dwelling Capacity	% Share
Lower	Greenfield	5	13%	190	8%
	Brownfield	12	30%	685	27%
Middle	Greenfield	2	5%	24	1%
	Brownfield	6	15%	769	31%
Higher	Greenfield	2	5%	395	16%
	Brownfield	13	33%	440	18%

Source: HBC, 2026.

5.15 The majority of sites are brownfield, with greenfield land accounting for 23 - 25% of the total number of prospective development sites and units. We have been mindful of this when forming the typologies and applying judgement to the outcomes of our appraisals, in that the conclusions drawn and recommendations made should not be disproportionately influenced by the distribution of site types.

Residential Typologies

5.16 Based on our assessment of the list of sites provided by the Council, along with the outcomes of our property market analysis and adopted value zones, we have devised the following residential typologies.

5.17 The tables below use the following abbreviations:

- BF = Brownfield
- GF = Greenfield
- LV = Lower value zone
- MV = Middle value zone
- HV = Higher value zone
- F = Flats
- M = Mixed (flats & houses)
- H = Houses

Table 5.3 – Residential Typologies

Appraisal REF	Typology REF	No. Units	Type	Gross Site Area (ha)	Gross Density (dph)	Net-to-Gross	Net Site Area (ha)	Net Density (dph)
A	LV_GF_1	9	H	0.45	20.00	95%	0.43	21.05
B	LV_GF_2	12	H	0.52	23.00	95%	0.50	24.21

Source: AspinallVerdi, 2026.

5.18 We are conscious that in some instances, the site sizes and capacities provided by the Council fall below the density requirements set out in Figure 8 of the Pre-submission Local Plan. Further, where sites have been combined to form typologies, this can also influence the gross and net density. For the purpose of the baseline appraisals, and to ensure consistency with the data provided by the Council, we have left the densities unchanged, however further testing has explored where density could be improved and how this impacts viability.

Unit Mix

5.19 To determine an appropriate mix of dwelling types to adopt in the appraisals, we have had regard to Policy SC2: Housing mix, Accessibility and Adaptability of the Local Plan, which states:

> *'Over the lifetime of the Plan new housing development needs to provide an appropriate mix of housing types and tenures which are capable of meeting the needs of occupiers at different stages of their lives. New homes need to be future proofed in terms of accessibility and adaptability. The Hastings and Rother Strategic Housing and Economic Needs Assessment (HEDNA) identifies a need for all housing types and tenures within Hastings to address demand for housing.'*

5.20 The Council, along with surrounding Rother District, commissioned DLP Planning and Edge Analytics to produce an addendum to their original HEDNA (August 2026). This sets out the updated need for market and affordable dwellings by property size and type, as shown in Figure 5.4.

Figure 5.4- HEDNA Unit Mix by Bedroom

Mix by Bedroom Need	Bedrooms				Total
	1 bed	2 bed	3 bed	4 bed	
Market	18%	34%	33%	15%	100%
Affordable Home Ownership	39%	39%	18%	5%	100%
Social/Affordable Rent	40%	31%	20%	9%	100%
Total	23%	34%	30%	13%	100%

Source: DLP Planning and Edge Analytics, 2026.

5.21 Through further discussions with the Council, we understand the following unit mix should be sought for affordable housing:

- 1-bed homes – 30%
- 2-bed homes – 35%
- 3-bed homes – 30%
- 4-bed homes – 5%

5.22 We are conscious that some sites are expected to deliver houses only, for which we would not expect there to be any / many 1-bed units, whilst others are evidently higher-density flatted developments which are typically less likely to deliver 3 & 4-bed units. Where necessary, we have made pro-rata adjustments to ensure the unit mixes tested are reflective of the type of development and densities expected to be delivered. For example, on flatted-only sites, the market housing unit mix has been divided amongst the 1- and 2-bed units alone. For completeness, we have rounded the splits to the nearest whole figure.

Unit Size & Values

5.23 The unit sizes and values adopted in each of the value zones are set out in Table 5.4, Table 5.5 and Table 5.6. The evidence supporting these assumptions is contained within our property market report appended to this study.

5.24 The market evidence informing the residential market research was collected in July 2026, drawing on achieved sales, new-build pricing and agent consultations. We have also considered the comments, feedback and evidence received as part of our stakeholder workshop.

Table 5.4 - Proposed Residential Sales Values (Lower Value Zone)

Property type	Value	Size (sqm)	£ / psm	£ / psf
1 Bed Flat	£192,500	50	£3,850	£358
2 Bed Flat	£245,000	65	£3,769	£350
2 Bed House	£315,000	75	£4,200	£390
3 Bed House (w/ Garage)	£350,000	90	£3,889	£361
4Bed House (w/ Garage)	£425,000	115	£3,696	£343

Source: AspinallVerdi, 2026.

Table 5.5 – Proposed Residential Sales Values (Middle Value Zone)

Property type	Value	Size (sqm)	£ / psm	£ / psf
1 Bed Flat	£200,000	50	£4,000	£372
2 Bed Flat	£255,000	65	£3,923	£364
2 Bed House	£325,000	75	£4,333	£403
3 Bed House (w/ Garage)	£365,000	90	£4,056	£377
4Bed House (w/ Garage)	£440,000	115	£3,826	£355

Source: AspinallVerdi, 2026.

Table 5.6 - Proposed Residential Sales Values (Higher Value Zone)

Property type	Value	Size (sqm)	£ / psm	£ / psf
1 Bed Flat	£210,000	50	£4,200	£390
2 Bed Flat	£265,000	65	£4,077	£379
2 Bed House	£337,500	75	£4,500	£418
3 Bed House (w/ Garage)	£372,500	90	£4,139	£385
4Bed House (w/ Garage)	£450,000	115	£3,913	£364

Source: AspinallVerdi, 2026.

5.25 For the flatted unit types, we have made a net-to-gross adjustment of 85%. Please note this has been varied for the older persons housing typologies which are set out later in this chapter.

5.26 The unit sizes have been informed by the findings from our property market review and the nationally described space standards, as summarised in Figure 5.5.

Figure 5.5 – Nationally Described Space Standards

Number of bedrooms(b)	Number of bed spaces (persons)	1 storey dwellings	2 storey dwellings	3 storey dwellings	Built-in storage
1b	1p	39 (37) *			1.0
	2p	50	58		1.5
2b	3p	61	70		2.0
	4p	70	79		
3b	4p	74	84	90	2.5
	5p	86	93	99	
	6p	95	102	108	
4b	5p	90	97	103	3.0
	6p	99	106	112	
	7p	108	115	121	
	8p	117	124	130	
5b	6p	103	110	116	3.5
	7p	112	119	125	
	8p	121	128	134	
6b	7p	116	123	129	4.0
	8p	125	132	138	

Source: DLUHC, March 2015.

Affordable Housing Transfer Values

5.27 We have assumed the following transfer values for the affordable housing. These replicate the prices a Registered Provider may pay to acquire affordable housing and are applied as a percentage of the open market value (OMV).

Table 5.7 - Affordable Housing Transfer Values

Tenure	% OMV	Comments
Social Rent	40%	In accordance with the Government's Policy Statement on Rents for Social Housing. Weekly formula rents are based on a combination of January 1999 property valuations, relative county earnings, and bedroom weightings, in line with the prescribed rent-setting methodology.
Affordable Rent	60%	Based on Local Housing Allowance weekly rental rates. Gross rental income has been adjusted to reflect allowances for management, maintenance, voids and bad debts before being capitalised into perpetuity to derive value.
Shared Ownership	70%	Based on an initial sale of 25%, with an equity rent of 2.75% on the unsold share and management costs of 20% per annum. The net rent is capitalised and then combined with the price of the initial sale.

Source: AspinallVerdi, 2026.

Older Persons' Housing Typologies

5.28 Policy H1 (Specialist Housing for Older People) and the supporting text recognises the need to deliver specialist housing for older people or groups with particular housing needs, subject to certain conditions. Whilst there are no specific sites within the list provided by the Council which are expected to deliver older persons' housing, we have sought to test the potential for this type of accommodation to deliver the relevant policy requirements sought by the Local Plan, including affordable housing.

5.29 In the absence of any specific sites from which we can form typologies, we have instead based our testing on our experience of assessing the viability of older persons' housing at a site-specific level. We have expanded the typologies previously tested to include a range of different types of older persons' housing, including age-restricted retirement living and extra care.

5.30 We have adopted a single value zone approach across the Borough as this type of accommodation does not typically vary as much as general needs housing. The typologies developed are summarised in Table 5.8.

Table 5.8 – Older Persons' Housing Typologies

Appraisal REF	Typology REF	Type	No. Units	Size Site (ha)	Net Density (dph)
GG	OP_GF_1	Retirement / age-restricted	75no. Flats	0.48	156.25
HH	OP_GF_2	Extra Care	60no. Flats	0.38	156.25
II	OP_BF_1	Retirement / age-restricted	75no. Flats	0.54	138.89
JJ	OP_BF_2	Extra Care	60no. Flats	0.43	138.89

Source: AspinallVerdi, 2026.

5.31 The unit mix has been adjusted for this type of accommodation to reflect what the market tends to deliver. We have assumed 40% 1-Bed and 60% 2-Bed.

5.32 Based on our review of available evidence, we have made the following assumptions in respect of the unit sizes and values.

Table 5.9 – Older Persons' Housing Unit Values & Sizes

Typology	Unit Type	Size (sqm)	Value	£ / psm	£ / psf
Retirement	1-Bed Flat	55	£275,000	£5,000	£464
	2-Bed Flat	80	£340,000	£4,250	£395
Extra Care	1-Bed Flat	55	£295,000	£5,364	£498
	2-Bed Flat	80	£360,000	£4,500	£418

Source: AspinallVerdi, 2026.

5.33 We have assumed the following net-to-gross assumptions for the older persons' housing typologies:

- Retirement = 80%
- Extra Care = 75%

Build-to-Rent (BTR) Typologies

5.34 As with the older persons' housing typologies, we have included 'generic' BTR scenarios to test the capacity to support the emerging policy requirements.

5.35 From previous consultations with established BTR providers and our experience of assessing the viability of BTR schemes at a site-specific level, we understand that the minimum unit threshold required is usually around 150no. units. This was described by one operator as the 'industry-standard' target. Based on our analysis of the private rental market, we have tested the following BTR scenarios.

Table 5.10 – Build-to-Rent Typologies

REF	BTR Type	Site Type	No. Units	Size Site (ha)	Density
BTR_GF_1	Multifamily	Greenfield	150	0.68	176 dph
BTR_GF_2	Single family	Greenfield	150	2.62	43 dph
BTR_BF_1	Multifamily	Brownfield	150	0.77	176 dph
BTR_BF_2	Single family	Brownfield	150	2.79	43 dph

Source: AspinallVerdi, 2026.

5.36 The unit mixes follow those adopted in the market sale residential appraisals, informed by the HEDNA and feedback from HBC.

5.37 We have assumed operating expenses at 25% for multifamily and 20% for single family. This is defined as the difference between the gross rent and the costs attributable to the provision of services at the BTR development, including maintenance and management. Table 5.11 summarises the sources referred to when informing our leakage deduction.

Table 5.11 – BTR Leakage Costs

Source	OpEx
JLL [53]	21 – 35%
Turner & Townsend [54]	20 – 35%
Blackstock Consulting [55]	30%

Sources: As referenced.

5.38 Table 5.12 summarises the value assumptions adopted for the BTR typologies.

Table 5.12 - BTR Unit Values & Sizes

Type	Size (sqm)	Rent (pcm)	Yield	Leakage / OpEx
1-Bed Flat	50	£1,100	5.0%	25%
2-Bed Flat	70	£1,300	5.0%	25%
2-Bed House	75	£1,425	5.0%	20%
3-Bed House	90	£1,750	5.0%	20%
4-Bed House	115	£1,950	5.0%	20%

Source: AspinallVerdi, 2026.

[54] Turner & Townsend, 2017. Build to rent: hitting the sweet spot.
[55] Blackstock Consulting, 2019. Paying for the long term BTR model.

Residential Cost Assumptions

5.39 The development costs adopted within our appraisals are evidenced (where necessary) and set out below.

Initial Payments

5.40 The table below sets out our initial development cost assumptions. These are generally payments in respect of site feasibility and planning before start-on-site.

Table 5.13 - Initial Payments Cost Assumptions

Item	Baseline Assumption
Statutory Planning Fees	Based on the national formula.
Planning Application Professional Fees & Reports	Assumed at 3-5x the statutory planning fees. Covers costs for consultants and advice required for certain evidence at the application stage.

Source: AspinallVerdi, 2026.

Section 106 & Infrastructure Contributions

5.41 For the residential typologies, we have assumed S106 contributions of £3,000 per unit for sites of 1 – 14no. units, and £6,700 per unit for sites larger than 15no. units. This is based on data provided by Hastings Borough Council and reflects contributions for transport, open space / play, playing pitches, built facilities and police.

Construction Cost Assumptions

5.42 The table below sets out our construction cost assumptions for the residential typologies.

Table 5.14 - Construction Cost Assumptions

Item	Baseline Assumption	Comments
Site Clearance, Demolition & Remediation	£123,500 per hectare	Brownfield site clearance / remediation allowance (as for local plan viability). Based on the accepted assumption in other LPVAs.
Estate Housing	£2,107 psm (< 100 units) £1,892 psm (>100 units)	BCIS Estate Housing (Generally), 5yr sample. Rate varied in response to BCIS data, showing decrease in £ / psm rate for larger schemes, with data for those between 5,000 – 10,000

Item	Baseline Assumption	Comments
		sqm ranging from c. £1,000 - £2,000 psm. (Note – copies of all BCIS cost data are provided in Appendix 7).
Flats (new-build)	£2,522 psm (< 100 units) £2,064 psm (>100 units)	BCIS Estate Housing (Generally), 5yr sample. Rate varied in response to BCIS data, showing decrease in £ / psm rate for larger schemes (as above).
Older Persons (inc. retirement, extra care)	£2,367 psm	Blended rate (median) between BCIS Supported Housing and Care Homes for the Elderly, 10 yr sample.
Garages	£600 psm	Consistent with costs assumed in other LPVAs. Sizes range from 16 sqm (single) to 32 sqm (double). Applied to 3-4-bed housing unit types only.
External Works	10 - 15%	Inc. SUDS / drainage; estate roads, landscaping, external furnishings etc. Lower rate expected on brownfield sites.
Future Homes Standard	£4,350 per unit	Weighted average of increase in capital costs from 2025 standard, set out in 'Final stage impact assessment: Future Homes Standard (FHS)' – March 2026.
Building Safety Levy	£15.11 psm (brownfield) £30.21 psm (greenfield)	As per the rates published by MHCLG in July 2025.[56]
Contingency	3.0 - 5.0%	Applied to the base construction costs, external works and all policy costs (see Table 5.15). Applied to both brownfield and greenfield sites.

Sources: As referenced.

[56] MHCLG, 2025. Building Safety Levy: Guidance, Section 2: Levy rates and calculations

Policy Cost Assumptions

5.43 Table 5.15 summarises the costs included within the appraisals to meet the policy requirements specified in the New Local Plan, along with the sources from which these costs have been informed.

Table 5.15 – Policy Cost Assumptions

Item	Baseline Assumption	Comments
Biodiversity Net Gain (10%)	£400 per unit (brownfield) £1,000 per unit (greenfield)	'Biodiversity net gain (BNG) area-based exemption evidence annex' – DEFRA, April 2026. Typologies of 0.2ha or less are exempt.
Net Zero Carbon	£72 psm (flats) / £105 psm (housing)	Blended rates for housing and flats as set out in Hastings Council Net Zero Policy – Technical Evidence Base (August 2026) by Introba and Currie & Brown. This is the extra-over cost above FHS allowance in Table 5.14.
Category M4(2) Accessibility Standard (houses & flats)	£1,400 per unit	Based on costs advised in DLUHC consultation paper, published July 2022 – 'Raising accessibility standards for new homes: summary of consultation responses and government response'.
Category M4(3)b Accessibility Standard (houses & flats)	£22,000 per unit	Based on costs advised in 'The social and economic value of wheelchair user homes' study undertaken by Habinteg and the London School of Economics, September 2023. Assumes dwellings are wheelchair accessible (i.e. M4(3)(2)(b)).
Water Efficiency	£20 per unit	Reflects cost required to achieve <=100 litres per person per day.
Urban Greening Factor	£127.50 psm	Based on the City of London Corporation's Urban Greening Study (July 2018) which assumed £100 psm for green roofs which achieved a UGF of 0.4. Index

Item	Baseline Assumption	Comments
		linked to present day using BCIS TPI. UGF has been applied to higher density brownfield developments only, as it is assumed that greenfield developments and housing only sites at lower densities or on lessen plot ratios on brownfield land will meet the relevant UGF through the external works, landscaping, BNG allowances, densities and net-to-gross developable areas.
CIL	None	We have sought to identify any 'headroom' for CIL as part of our instructions.

Sources: As referenced.

5.44 Some of the assumptions above are considered to overlap, allowing scope for flexibility and pragmatism in the application of the policies in the Plan. For example, the external works allowance may overlap with the costs included to achieve biodiversity net gain, urban greening factor, as well as the net-to-gross site area adjustments applied to the typologies (i.e. undeveloped areas). Similarly, for older persons housing, the costs for meeting M4(2) or M4(3) accessible housing are expected to be implicit within the BCIS base build costs. The overlaps provide an additional buffer to viability, which is considered as part of the overall judgement of the appraisal outcomes and subsequent recommendations.

5.45 The appraisals do not currently capture the potential for enhanced scheme value or reduced operating costs that can be created by low-energy homes and emerging markets driven by regeneration masterplans, as well as savings in construction costs achieved as low-carbon and energy-efficient building technologies become embedded within the industry. It is therefore likely that the model's cost assumptions already incorporate implicit viability buffers. These should be considered when assessing the overall outcomes of the viability testing.

Other Cost Assumptions

5.46 Table 5.16 sets out the remaining costs and fees assumed for the residential typologies.

Table 5.16 - Other Cost Assumptions

Item	Baseline Assumption	Comments
Professional Fees	10.0% of construction costs	Increased from 8.0% in the 2024 assessment to reflect technical assessments required in policies.

Item	Baseline Assumption	Comments
Marketing & Promotion	1.0% of GDV (market sale) 3.0% of GDV (older persons' housing)	In line with typical assumptions used for viability testing, varied for different residential uses.
Residential Sales Agent	1.0% of GDV	In line with typical assumptions used for viability testing.
Residential Sales Legal	0.5% of GDV	As above.
Empty Property Costs	£500 per unit	For older persons' housing, applied to affordable units.
Letting Agent	10.0% of annual ERV	In line with typical assumptions used for viability testing.
Letting Legal	5.0% of annual ERV	As above.
Investment Sale Agent	1.0%	As above.
Investment Sale Legal	0.5%	As above.
Marketing & promotion (BTR)	0.5%	As above.
Debit Interest	7.5%	Appraisals assume the developments are 100% debt-financed.

Sources: As referenced.

Profit Assumptions

5.47 We have adopted a baseline profit of 17.5% on the Gross Development Value of the market sale housing, with a sensitivity analysis which shows the impact of profit between 15-20%. This is consistent with the PPG (May 2019) which refers to a range of 15-20%[57] being '*considered a suitable return to developers in order to establish the viability of plan policies*.' For affordable housing, we have adopted a lower return of 6.0% on GDV. It is widely accepted that returns for affordable housing are lower, and the return assumed in the testing is broadly accepted as an industry-standard level.

5.48 For BtR typologies, we have adopted a profit on cost of 15.0%. This reflects the level of risk associated with these developments and is made on the basis it is delivered speculatively and then disposed of as a stabilised asset. If BtR schemes are instead to

[57] Paragraph: 018 Reference ID: 10-018-201 90509, Revision date: 09 05 2019

be delivered using forward funding, the profit and finance rate should be adjusted accordingly to reflect the risk, along with the yield. Such matters should be considered at the decision-making stage.

5.49 The profit assumptions for older persons housing typologies are consistent with those adopted for the market sale residential appraisals (i.e. 17.5% on GDV private & 6.0% affordable).

5.50 It is good practice for policy obligations not to be set at the margins of viability. However, in certain circumstances, developers will agree lower profit margins to secure planning permission and generate turnover. The sensitivity analyses within the appendices show the 'balance' (i.e., RLV – BLV) for developer's profit from 20.0% on private housing down to 15.0%. This clearly shows the significant impact of profit on viability, especially for larger schemes. It may also be appropriate to consider the profit in gross monetary terms for such developments.

Residential Land Value Assumptions

5.51 Land value is one of the key variables (together with profit) which determines the viability and deliverability of a scheme. The Land Market paper (see Appendix 2) sets out our approach and analysis of available evidence. This section outlines the findings and the key assumptions made for the purpose of this assessment. These are the benchmark values that we would assume for our hypothetical viability appraisals, and they act as the benchmark to test the RLVs of schemes to determine whether sites would come forward for development. Please see the BLV Conclusions and Caveats section (at the end of chapter 4) concerning site-specific negotiations and premiums.

5.52 Within the post-2019 versions of the NPPF, government policy has changed to ensure that policies are tested and viable at the plan-making stage; the developer has planning certainty to agree the land price with the landowner; and the scheme is delivered on a policy-compliant basis.

5.53 For greenfield typologies, we adopt a bottom-up approach based on the net existing use value per acre / hectare of agricultural land. This EUV is 'grossed up' to reflect a net developable to gross site area ratio. Based on existing evidence, we have upheld the greenfield land values adopted in the 2024 assessment of £170,000 per acre. This reflects a multiplier premium of between 12 – 18x EUV when assuming the averages arising from the market report (Appendix 2).

5.54 For the residential typologies on brownfield land, the BLV is based on comparable evidence of sales for previously developed sites. Note that EUVs for brownfield sites are sensitive to the particular use (i.e. the EUV could be lower if the site is not in existing lawful use for industrial / commercial) and any legacy costs of contamination, site remediation and demolition. The working assumption is that most, if not all, of the brownfield land is redeveloped (90 - 100% net to gross). The uplift multiplier, expressed as a percentage, is 10% - 25% depending on several factors.

5.55 In this instance, we have increased the value assumption from the 2024 assessment (£350,000 per acre) to £400,000 per acre, inclusive of a landowner premium.

5.56 It is important to reiterate that the BLV should not be expected to equate to the market value, nor the price to be paid in the marketplace. As set out in the RICS professional standard, the BLV is a mechanism to assess the viability of a site to provide developer contributions. It should be set at a level that provides the minimum return at which a

reasonable landowner would be willing to sell.[58] As set out in our market report, our BLVs have considered the minimum prices at which land has been sold for across Hastings and the surrounding areas.

5.57 Part of the planning process is to access 'land value capture' for the provision of infrastructure, affordable housing and other policy objectives (e.g. emissions reductions). In the absence of other funding opportunities, it may be that landowners have to accept lower values to deliver the required objectives. It is recognised that landowners need to achieve a premium to sell their land for development, but it must also be acknowledged that there are a range of motivations for selling – including forced sales when a bank forecloses and / or where redundant sites become liabilities. This enables some opportunities for land to be acquired below the headline BLVs.

Timescales & Phasing

5.58 For each of the typologies, we have assumed a pre-construction, construction and sales period which are then reflected in the appraisals through the cash flow. The sections below summarise the assumptions made for each typology.

Residential Typologies

5.59 Our residential appraisals assume the affordable housing is acquired during the construction period, in line with how the market operates on a 'golden brick' basis. For those typologies which deliver housing (i.e. not solely flatted schemes), the sales period may commence before the end of the construction period (depending on the size of the site / proposals). For flatted typologies, we have generally assumed sales commence upon completion of construction, however for those delivering a higher number of units, we have assumed that this may be across a number of different blocks which may commence in advance of practical completion of the site as a whole (i.e. as a phased development).

Build-to-Rent Typologies

5.61 We have assumed the following timescales in the BTR appraisals:

- Pre-construction: 6-months
- Construction: 24-months
- Sales: 1-month (after 6-month stabilisation).

6 Non-residential Typologies & Assumptions

6.1 This section summarises the approach to testing the non-residential uses, including the employment allocations.

Employment Site Typologies

6.2 The Council have provided a list of employment sites being considered as part of the plan-making process. As with the residential list, we have sought to group the sites based on shared characteristics, considering the following:

- **Site characteristics** – we have considered the size of the sites (ha/ac) and site coverage.
- **Type of development** – the sites have been described / categorised as employment (i.e. B2, B8, E(g)(iii) and Class E offices). The differences have been reflected in the cost and value assumptions made for each site.
- **Allocation capacity** – we have considered the amount of floorspace stipulated by the Council and any similarities between different sites.

6.3 Through further discussions with the Council, we understand that the plan is seeking to achieve a plot ratio of 0.4 on employment sites for single-storey B2/B8/E(g)(iii) development. From a review of the minimum indicative capacities against the site areas, it is evident that some sites have plot ratios which fall below the 0.4 target, although we understand some are as a result of site-specific circumstances (e.g. ecology, SSSI, buffers etc.). Hence, we have taken the indicative capacities in the plan and ensured that the plot ratio target of 0.4 is maintained across all typologies.

6.4 Based on our analysis of the above criteria, together with feedback from the Council, we have tested the following uses / sites.

Table 6.1 – Employment Site Typology Summary

REF	Land	Type	Gross Site Size (ha)	Capacity (sqm)
EMP 1	Greenfield	B2 / B8 / E(g)(iii) Mixed use	0.08	300
EMP 2	Greenfield	B2 / B8 / E(g)(iii) Mixed use	0.16	620
EMP 3	Greenfield	B2 / B8 / E(g)(iii) Mixed use	0.55	2,200
EMP 4	Greenfield	B2 / B8 / E(g)(iii) Mixed use	1.40	5,600
EMP 5	Brownfield	B2 / B8 / E(g)(iii) Mixed use	0.08	300
EMP 6	Brownfield	B2 / B8 / E(g)(iii) Mixed use	0.16	620
EMP 7	Brownfield	B2 / B8 / E(g)(iii) Mixed use	0.55	2,200
EMP 8	Brownfield	B2 / B8 / E(g)(iii) Mixed use	1.40	5,600

Employment Typology Cost & Value Assumptions

6.5 Table 6.2 summarises the cost and value inputs adopted in the appraisals testing the non-residential sites.

Table 6.2 – Employment Typology Cost & Value Assumptions

Item	Baseline Assumption	Comments
Industrial Rent & Yield	Small - £13.50 psf / 7.50% Large - £11.00 psf / 7.25%	Based on the outcomes of our commercial market report (Appendix 8).
Office Rent & Yield	Small- £20.00 psf / 8.50% Large- £15.00 psf / 8.00%	As above.
Purchaser's Costs	6.80%	Industry-standard assumption. Deducted from gross capital value to reflect acquisition costs, agency fees, SDLT etc.
Statutory Planning Fees	Variable	Based on the national formula.
Planning Application Fees	3.0x – 5.0x statutory fees	Costs for surveys, consultants, advice etc. up to cap of £250,000.
Site Clearance & Remediation	£123,500 per hectare	Same rate adopted for residential testing. Brownfield sites only.
Industrial Construction Cost	£1,037 psm / £935 psm	BCIS 284. Warehouses/stores, 10yr sample, median rate, rebased to Hastings. Adjusted based on unit size (min 2,000 sqm threshold for lower cost)
Office Construction Cost	£2,949 psm	BCIS 320. Offices, 10yr sample, median rate, rebased to Hastings.[59]
External Works	10.0%	Percentage of construction costs. In keeping with typical assumptions used for viability testing.
Net Zero Carbon	£31 psm (industrial) / £40 psm (office & retail)	As advised in Hastings Council Net Zero Policy – Technical Evidence Base (August 2026) by Introba and Currie & Brown. No

[59] BCIS Location Factor for Hastings = 116 as of July 2026

Item	Baseline Assumption	Comments
		specific rate for retail so assumed at same uplift for office.
Biodiversity Net Gain	£6,600 per hectare (GF) / £3,300 per hectare (BF)	Viability Assessment of Biodiversity Net Gain in Essex, SQW – August 2024. Based on averages included in testing for on-site BNG on greenfield and brownfield employment / commercial sites. Crude discount of 50% on brownfield sites. Sites of 0.2ha or less are exempt.
Contingency	3.0 - 5.0%	Percentage of construction costs. In keeping with typical assumptions used for viability testing and 2024 study.
Professional Fees	10.0%	As above.
Letting Agent	10.0% of annual ERV	In keeping with typical assumptions used for viability testing.
Letting Legal	5.0% of annual ERV	As above.
Sales Agent	1.0% of GDV	As above.
Sales Legal	0.5% of GDV	As above.
Marketing	0.5% of GDV	As above.
Finance	7.5%	Consistent with the finance rate adopted for residential testing.
Developer Profit	15.0% on cost	Lower margins typically sought on non-residential development.
CIL	None	We have sought to identify any 'headroom' for CIL as part of our instructions.
S106	£2.00 psm	In line with assumptions adopted in other LPVAs.

Sources: As referenced.

Other Non-residential Scheme Typologies

6.6 To ensure the testing is also considerate of other non-residential uses outside of those being considered for employment use (B2/B8/ Eg(iii) Mixed use), we have also created a number of non-residential typologies which seek to establish the viability of common commercial uses (e.g. retail and office). As with the other typologies, these are varied

by type, size and whether they are delivered on greenfield or brownfield sites. From this, we are able to make recommendations on whether these uses can support the extent of policy requirements stipulated in the Local Plan, and / or if a viable CIL charge can be introduced. We summarise the uses and typologies tested in Table 6.3.

Table 6.3 – Non-residential Typologies

REF	Use	GIA (sqm)	Site Size (ha)	Plot Ratio
NR_GF_1	Small Retail	200	0.03	75%
NR_GF_2	Medium Retail	500	0.10	50%
NR_GF_3	Large Retail / Supermarket	4,000	1.00	40%
NR_GF_4	Small Office	400	0.05	75%
NR_GF_5	Medium Office	1000	0.10	100%
NR_GF_6	Large Office	3,000	0.40	75%
NR_BF_1	Small Retail	200	0.03	75%
NR_BF_2	Medium Retail	500	0.10	50%
NR_BF_3	Large Retail / Supermarket	4,000	1.00	40%
NR_BF_4	Small Office	400	0.05	75%
NR_BF_5	Medium Office	1000	0.10	100%
NR_BF_6	Large Office	3,000	0.40	75%

Source: AspinallVerdi, 2026.

Other Non-residential Typology Cost & Value Assumptions

6.7 The non-residential typologies adopt a number of the cost and value assumptions set out in Table 6.2 for the employment sites. Table 6.4 and Table 6.5 therefore summarise the components where the cost and value assumptions differ from those in Table 6.2. Please refer to our commercial market report for further information relating to the assumptions adopted.

Table 6.4 - Non-residential Typology Value Assumptions

REF	Use	Rent (£ / psf)	Yield	Incentive
NR_GF_1	Small Retail	£21.00	7.25%	6-months
NR_GF_2	Retail - Express	£21.00	6.50%	6-months
NR_GF_3	Large Retail	£19.00	7.25%	6-months
NR_GF_4	Supermarket	£19.00	5.50%	6-months
NR_GF_5	Small Office	£20.00	8.50%	6-months
NR_GF_6	Large Office	£15.00	8.00%	6-months

REF	Use	Rent (£ / psf)	Yield	Incentive
NR_BF_1	Small Retail	£21.00	7.25%	6-months
NR_BF_2	Retail - Express	£21.00	6.50%	6-months
NR_BF_3	Large Retail	£19.00	7.25%	6-months
NR_BF_4	Supermarket	£19.00	5.50%	6-months
NR_BF_5	Small Office	£20.00	8.50%	6-months
NR_BF_6	Large Office	£15.00	8.00%	6-months

Source: AspinallVerdi, 2026.

6.8 There has been limited evidence for any rent-free incentives or void periods. We have assumed a combined rent free / void period of 6-months within our testing.

Table 6.5 - Non-residential Typology Cost Assumptions

REF	Construction Cost	BCIS Category / Comments
Retail	£1,849 psm	BCIS 3245. Shops, default sample, median rate, rebased to Hastings.
Supermarkets	£2,043 psm	344. Hypermarkets, supermarkets, Generally, default period, median

Source: BCIS, 2026.

6.9 The remaining costs included in the non-residential typology appraisals are consistent with those set out in Table 6.2, including:

- Application fees / surveys
- Site clearance & demolition
- External works
- Biodiversity net gain
- Contingency
- Professional fees
- Disposal costs – lettings, agency, legal, marketing
- Development finance
- Profit

Timescales & Phasing

6.10 Below, we summarise the phasing assumptions adopted in the employment and mixed-use typologies.

Employment Typology Timescales

6.11 We have adopted the following phasing for the non-residential sites provided by the Council.

Table 6.6 – Employment Typology Timescales

REF	Pre-construction	Construction	Sales
EMP_1	3-months	6-months	1-month
EMP_2	3-months	6-months	1-month
EMP_3	3-months	12-months	4 x 1-month
EMP_4	3-months	16-months	4 x 1-month
EMP_5	3-months	12-months	1-month
EMP_6	3-months	15-months	1-month
EMP_7	3-months	6-months	4 x 1-month
EMP_8	3-months	6-months	4 x 1-month

Source: AspinallVerdi, 2026.

6.12 Further information provided by the Council from recent employment developments across the Borough has indicated that some larger sites have been delivered in phases, with the units disposed upon completion of each phase. As such, for the larger typologies (EMP 3, 4, 7 & 8), we have assumed that the developments will be delivered in four stepped phases.

Non-residential Typology Timescales

6.13 Table 6.7 shows the phasing adopted for the non-residential typologies.

Table 6.7 – Mixed-Use Typology Timescales

REF	Pre-construction	Construction	Sales
NR_GF_1	3-months	6-months	1-month
NR_GF_2	3-months	6-months	1-month
NR_GF_3	6-months	18-months	1-month
NR_GF_4	3-months	6-months	1-month
NR_GF_5	6-months	12-months	1-month
NR_GF_6	6-months	24-months	1-month
NR_BF_1	3-months	6-months	1-month
NR_BF_2	3-months	6-months	1-month
NR_BF_3	6-months	18-months	1-month
NR_BF_4	3-months	6-months	1-month
NR_BF_5	6-months	12-months	1-month

REF	Pre-construction	Construction	Sales
NR_BF_6	6-months	24-months	1-month

Source: AspinallVerdi, 2026.

6.14 The income from the disposal of the commercial units is assumed to be received within the first 6-months after practical completion.

7 Residential Viability Results

7.1 This section sets out the results of the residential, older persons housing and build-to-rent typology testing. The appraisals have been through an iterative process with the Council, which have been refined in light of feedback received and following the completion of our stakeholder workshop. This process has informed our recommendations on the extent of policy requirements sought by the Local Plan and introduction of a CIL charge.

7.2 We have appraised the typologies using the baseline assumptions described above and included extensive sensitivity testing for each appraisal. As described in Section 4, the baseline appraisals are fully policy-compliant, in that all the policy costs are fixed inputs. For the residential sites, this includes the following (subject to thresholds / applicability):

- Strategic Policy 5 – Net Zero Carbon
- Strategic Policy 8 & Policy SC10 – 10% biodiversity net gain
- Strategic Policy 10 & Policy ID1 – S106 contributions
- Policy SC2 – M4(2) & M4(3)(b) accessibility
- Policy SC3 – 100 litres / person / day water efficiency
- Policy SC13 – Urban Greening Factor

7.3 In addition to the Hastings-specific policies above, we have also included allowances for the Future Homes Standard and Building Safety Levy in all appraisals.

7.4 Affordable housing has been tested incrementally to establish where the viability tipping point lies with each appraisal. We have then made a stand-back judgement across all appraisals to identify appropriate thresholds which allow the majority of unconsented land supply to come forward whilst maintaining the viability of the policy asks in the updated Local Plan. In this respect, we have tested three scenarios:

- **Scenario A** – Baseline appraisals with all fixed policy costs, as described in Paragraph 7.2.
- **Scenario B** – All policy costs removed (including affordable housing) excluding those which are mandatory (i.e. Building Safety Levy, Biodiversity Net Gain & Future Homes Standard)
- **Scenario C** – Pragmatic appraisals with adjustments to tenure split, base build costs, policy costs and benchmark land value.

7.5 Particular attention should be paid to the sensitivity tables across all typologies. These are shown at the bottom of each appraisal and are listed below. It is important to note that the tables are 2-way sensitivities based on various parameters and affordable housing.

- Table 1 – CIL v Affordable Housing %
- Table 2 – Site Specific S106 v Affordable Housing %
- Table 3 – Profit v Affordable Housing %
- Table 4 – BLV v Affordable Housing %

- Table 5 – Density v Affordable Housing %
- Table 6 – Build Cost v Affordable Housing %
- Table 7 – Market Values v Affordable Housing %
- Table 8 – BNG v Affordable Housing %
- Table 9 – Grant v Affordable Housing %

7.6 The summary tables presented in the following sections of this chapter summarise the viability results from our appraisals. The tables indicate viability using a RAG rating system as indicated below.

Table 7.1 - Viability RAG Rating

VIABLE	if RLV > BLV
MARGINAL	if RLV < BLV, but RLV is positive
UNVIABLE	if RLV < BLV, and RLV is negative

Source: AspinallVerdi, 2026.

Scenario A – Baseline Appraisal Outcomes

7.7 The subsections below present the outcomes of the baseline appraisals which include fixed policy costs in accordance with those sought in the Pre-Submission Version (Regulation 19) Draft Local Plan. For affordable housing, we have assumed a starting point which is consistent with the upper end of the thresholds currently sought in the adopted plan policy of 40% on greenfield sites and 25% on brownfield.

7.8 Please note that tables which contain numbers in brackets denote negative amounts.

Lower Value Zone Residential Typologies (A – L)

7.9 The following tables summarise the viability results of the typologies in the lower value zone, as set out in Table 7.2.

Table 7.2 – Lower Value Zone Typologies

Appraisal REF	Typology REF	Land Type	No. Units	Development Type
A	LV_GF_1	Greenfield	9	Houses
B	LV_GF_2	Greenfield	12	Houses
C	LV_GF_3	Greenfield	25	Houses & Flats
D	LV_GF_4	Greenfield	20	Houses
E	LV_GF_5	Greenfield	40	Houses & Flats
F	LV_GF_6	Greenfield	100	Houses
G	LV_BF_1	Brownfield	5	Flats
H	LV_BF_2	Brownfield	7	Houses

Appraisal REF	Typology REF	Land Type	No. Units	Development Type
I	LV_BF_3	Brownfield	15	Flats
J	LV_BF_4	Brownfield	20	Houses & Flats
K	LV_BF_5	Brownfield	40	Flats
L	LV_BF_6	Brownfield	100	Houses & Flats

Source: AspinallVerdi, 2026.

7.10 For context, the lower value zone accounts for 43% of the potential development sites included in the list provided by the Council and 36% of the total dwellings. The majority of sites in the lower value zone are brownfield (30%) which account for 27% of the total number of dwellings. The greenfield lower value zone sites account for 13% of the total and an 8% share of the dwelling capacity. As noted, this is the long list of potential development sites being considered as part of the plan making process and not the finalised allocations.

7.11 Copies of the full appraisals are provided in Appendix 9.

Lower Value Zone Appraisal Summary

7.12 Table 7.3 and Table 7.4 show that of the 12no. typologies tested in the lower value zone, 1no. is marginal and the remaining 11no. are unviable. The sole marginal typology is a small flatted conversion scheme, which benefits from lower construction costs when compared with new-build development, and primarily explains the uplift in viability.

7.13 Evidently, the extent of policy requirements sought in the Pre-Submission Version (Regulation 19) Draft Local Plan increases development costs and presents a significant viability challenge in the lower value zone (assuming existing affordable housing thresholds are maintained). The sensitivity analyses accompanying the unviable typologies show that reasonable adjustments would be required to both the base build costs and sales values in order for the policy requirements to become viable, with some requiring improvements of up to +/-40%. Alternatively, the inclusion of grant funding between £10,000 - £100,000 per unit enables sites in the lower value zone to become viable with all fixed policy requirements.

7.14 Flatted development is shown to be more challenging than sites that deliver solely housing. This type of development is more common on brownfield sites in the lower value zone. In addition to the higher BLV adopted for brownfield sites, flatted development costs are higher on a £ / psm basis and also require an adjustment to account for common areas such as entrance halls, plant rooms and circulation space. It is expected that the combination of these higher / additional costs is the reason as to why flatted development is less viable.

7.15 Nonetheless, the appraisals show the challenges faced by schemes in the lower value zone. As such, the Council may need to take a more flexible approach to the emerging policy requirements in order to maintain viability and ensure development remains deliverable.

Middle Value Zone Residential Typologies (M – V)

7.16 The following tables summarise the results of the middle value zone residential typologies, which are set out in Table 7.5.

Table 7.5 – Middle Value Zone Typologies

Source: AspinallVerdi, 2026.

7.17 For context, 8no. potential development sites within the list provided by the Council for consideration in this assessment are in the middle value zone. These are split as follows:

- Greenfield = 2no. sites (5%) / 24no. unit capacity (1%)
- Brownfield = 6no. sites (15%) / 769no. unit capacity (31%)

7.18 Accordingly, we have attached more weight to the outcomes of the brownfield appraisals as these sites account for the vast majority of development expected to come forward in this value zone.

7.19 Copies of the full appraisals are provided in Appendix 10.

Middle Value Zone Appraisal Summary

7.20 All typologies representative of sites located in the middle value zone are unviable. The appraisals assume 40% affordable housing on greenfield sites and 25% on brownfield, along with all other fixed policy costs and S106 contributions. As with the lower value zone typologies, the extent of policy requirements in the Pre-Submission Version (Regulation 19) Draft Local Plan presents a significant viability challenge.

7.21 The sensitivity analyses accompanying the middle value zone typologies show that adjustments similar to those in the lower value zone would be required for the full suite of policy asks to become viable (i.e. +/- 30%). In terms of grant funding, most brownfield appraisals show that subsidies of £50,000 - £100,000 per unit are required in order for developments to become viable.

7.22 Flatted development is again shown to be more challenging than those sites which deliver housing. One of the largest sites within the plan proposes 450no. flatted units on previously developed land, although we have been informed that this is expected to deliver 100% affordable housing. As such, we have attached less weight to the outcome of this particular appraisal given the differences.

7.23 Overall, and as with the results of the lower value zone baseline appraisals, the Council may need to take a more flexible approach to the emerging policy requirements in order to maintain viability and ensure development remains deliverable.

Higher Value Zone Residential Typologies (W – FF)

7.24 The following tables summarise the results of the higher value zone residential typologies, which are set out in Table 7.8.

Table 7.8 – Higher Value Zone Residential Typologies

Appraisal REF	Typology REF	Land Type	No. Units	Development Type
W	HV_GF_1	Greenfield	9	Houses
X	HV_GF_2	Greenfield	25	Houses
Y	HV_GF_3	Greenfield	50	Houses & Flats
Z	HV_GF_4	Greenfield	95	Houses
AA	HV_BF_1	Brownfield	7	Flats
BB	HV_BF_2	Brownfield	9	Houses
CC	HV_BF_3	Brownfield	10	Flats

EE	HV_BF_5	Brownfield	30	Houses & Flats
FF	HV_BF_6	Brownfield	150	Houses & Flats

Source: AspinallVerdi, 2026.

7.25 For context, 15no. of the potential development sites within the list provided by the Council are located within the higher value zone. The sites are split as follows:

- Greenfield = 2no. sites (5%) / 395no. unit capacity (16%)
- Brownfield = 13no. sites (33%) / 440no. unit capacity (18%)

7.26 As with the middle value zone, we have attached more weight to the outcomes of the brownfield appraisals in the higher value zone, given the significant proportion of sites and unit capacity.

7.27 Copies of the full appraisals are provided in Appendix 11.

Higher Value Zone Appraisal Results Summary

7.28 Of the 10no. typologies representative of sites located in the higher value zone, 2no. are viable and the remaining 8no. are unviable. As with typologies in other value zones, these include 40% affordable on greenfield sites and 25% on brownfield.

7.29 The viable typologies are similar to the sole marginal typology in the lower value zone – all being flatted schemes which are proposed to be converted from existing buildings, thus incurring a lower base build cost. Evidently, the lower cost associated with conversion schemes demonstrates some potential for affordable housing delivery, although this may be more likely in the form of financial contributions in lieu of on-site provision.

7.30 The remaining typologies in the higher value zone demonstrate similar outcomes to those tested in the lower and middle zones, in that the combination of policy requirements renders development with affordable housing unviable. Some greenfield typologies require favourable adjustments to the base build costs of -20 to -30% to become viable, or alternatively grant funding of between £40,000 - £100,000 per unit. For brownfield sites, particularly those which include flatted development, larger adjustments are required. Accordingly, and as noted in previous sections, flexibility in the application of policy requirements that go beyond the standards set out in building regulations will be important to ensure the plan does not render development undeliverable.

Scenario A – Baseline Appraisal Summary

7.31 Table 7.11 summarises the outcomes of all Scenario A appraisals.

7.32 Evidently, viability is challenging across all three value zones, with only two typologies shown as viable and one as marginal. As before, these include all fixed policy costs sought in the emerging Local Plan, S106 contributions and affordable housing at 40% on greenfield sites and 25% on brownfield.

7.33 For clarity, the outcomes also demonstrate that, based on the extent of policy requirements sought, it is not possible to introduce a viable CIL charge for residential development in Hastings.

Scenario B – Policy Costs Removed

7.34 Owing to the outcomes demonstrated from the baseline appraisals in Scenario A, we have sought to identify the impact of removing the costs associated with policies in the Pre-submission Draft Local Plan. This includes policies which are considered more fundamental to the ambitions of the plan, such as affordable housing and S106 contributions, as well as those which go beyond building regulations. The latter is in accordance with Policy PM13, Paragraph 1b, Part iii of the NPPF (2026), which states:

> *'Energy efficiency, for which any standards that go beyond the current or proposed Building Regulations should have a clear and robustly costed rationale which shows that there will not be an adverse impact on the viability and deliverability of development.'*

7.35 We have therefore removed the following costs and contributions from the appraisals in Scenario B:

- Affordable housing
- Section 106 contributions
- M4(2) & M4(3) accessibility
- Net zero carbon
- Water efficiency
- Urban Greening Factor

7.36 For the avoidance of doubt, we have retained the costs for the Building Safety Levy (BSL), biodiversity net gain (BNG) and Future Homes Standard (FHS) in the Scenario B appraisals. All other cost and value inputs remain unchanged from the Scenario A appraisals. Table 7.12 summarises the outcomes of the Scenario B appraisals.

Table 7.12 - Scenario B Appraisal Summary

Source: 260915 Hastings WPV Residential Appraisal Summary Sheet_v1.1.

7.37 With the policy requirements removed from the appraisals, viability is shown to improve, however the majority of typologies remain unviable or marginal.

7.38 As with the outcomes of the baseline appraisals in Scenario A, those typologies with the most headroom for policy requirements are generally smaller sites, or those which are to be formed from the conversion of existing buildings. Larger developments are shown to be less viable, particularly those involving the delivery of flatted units which incur higher development costs.

7.39 Table 7.13 summarises the range in adjustments required to the Scenario B appraisals for the typologies to become viable, as identified from the sensitivity tables accompanying each appraisal. Please note that the adjustments are independent of one another and do not reflect the collective changes required. Accordingly, it may be that a combination of lower levels of cost engineering, value appreciation and grant may result in schemes becoming viable.

7.40 Please note that, as affordable housing has been removed from these appraisals, the adjustments required to those typologies which are either marginal or unviable are for entirely private market sale schemes to generate a residual land value which meets or exceeds the benchmark.

Table 7.13 – Scenario B Sensitivity Adjustments to Achieve Viability

Value Zone	Site Type	Cost Adjust (-%)	Value Adjust (+%)	Grant (£ / unit)
Lower	Greenfield	10 – 20%	5 – 20%	£10,000 - £50,000
	Brownfield	10 – 30+%	5 – 30%	£10,000 - £100,000
Middle	Greenfield	10 – 20%	5 – 15%	£10,000 - £40,000
	Brownfield	10 – 40+%	5 – 20+%	£20,000 - £100,000+
Higher	Greenfield	10%	5 – 10%	£10,000 - £30,000
	Brownfield	10 – 30%	5 – 20+%	£20,000 - £100,000

Source: AspinallVerdi, 2026.

7.41 Table 7.13 shows that, at the lower end of the ranges, relatively modest adjustments are required in order for the Scenario B appraisals to become viable. For example, it is not considered unrealistic that average values in Hastings could increase by c. 5% over a plan period. Similarly, BCIS cost data in Hastings shows that developments have been delivered at rates 10-18% lower than those assumed in the baseline appraisals (discussed further in next section). However, it is acknowledged that for other typologies, more substantial adjustments are required which have not previously been demonstrated in house price or cost indices over a plan period.

7.42 Copies of the Scenario B appraisals are provided in Appendix 12.

Scenario C – Pragmatic Appraisals

7.43 The Scenario A & B appraisals show that viability is challenging in Hastings, and the policy requirements sought in the Pre-submission Draft Local Plan further reduce margins in a market when recent conditions have presented difficulties (i.e. subdued

house price growth and cost inflation). However, despite this backdrop, data provided by HBC from the most recent Local Plan Monitoring Report (2025/26) presents a contrasting view, with continued and strengthened housing delivery across the authority area in recent years, as shown in Table 7.14.

Table 7.14 – HBC Net New Dwellings by Monitoring Year

Year	Total Net New Dwellings After HDT	Annual Change (No. Dwellings)	Annual Change (%)
2021/22	167	+104	+160%
2022/23	116	-51	-31%
2023/24	127	+11	+9%
2024/25	402	+275	+217%
2025/26	520	+118	+29%

Source: HBC, 2026.

7.44 There has been a significant uplift in the net new dwellings delivered in Hastings over the past 2 years, with a combined total of 922no. net dwellings following the Housing Delivery Test adjustment. The two most recent monitoring years also show net annual completions which are comfortably above the longer-term average of 200no. demonstrated since 2004/05. Further interrogation of the data shows that 2- and 3-bed houses have the highest level of delivery, along with 1- and 2-bedroom flats – the latter being in spite of the emerging outcomes of the viability evidence.

7.45 Alongside market sale dwellings, there has also been an increase in affordable housing deliveries, as summarised in Table 7.15.

Table 7.15 – Affordable Housing Completions by Monitoring Year

Year	Gross AH Dwellings Completed	Annual Change (No. Dwellings)	Annual Change (%)	% of Total Completions
2021/22	23	-13	-36.1%	13.8%
2022/23	21	-2	-8.7%	18.1%
2023/24	28	+7	+33.3%	22.0%
2024/25	131	+103	+367.9%	32.6%
2025/26	177	+46	+35.1%	34.0%

Source: HBC, 2026.

7.46 The increase in the number of net dwellings has brought a corresponding uplift in the proportion of affordable housing delivered across Hastings, with substantial annual changes observed in 2024/25 and 2025/26. Both years exceed the long-term annual average of 29% observed since 2006/07.

7.47 Accordingly, and despite the backdrop of challenging market conditions, residential sites are continuing to come forward for development in the borough, delivering a mix of both market sale tenures and affordable housing. This suggests that there may be a disconnect between the assumptions and approaches adopted for the purposes of

assessing viability in planning (i.e. in accordance with the PPG & RICS Standards) and those experienced by developers, housebuilders and landowners in the marketplace.

7.48 In this respect, we have sought to understand how sites and affordable housing could be delivered in Hastings subject to adjustments to the extent of policy requirements, development costs and / or landowner / developer expectations. Whilst Scenario B demonstrates the impact of viability if Hastings concede on all policy requirements, this pragmatic approach (Scenario C) seeks to 'strike a balance' between public interest through the delivery of essential infrastructure and affordable housing, and the interests of developers and landowners (i.e., returns against risk).[60]

7.49 Scenario C follows a similar approach to that adopted in the viability assessments supporting the Wirral Local Plan, which has been through examination and is now adopted, as well as more recently as part of the examination of Central Lancashire's emerging plan. In the interest of clarity, both these assessments were undertaken in advance of Matthew Pennycook's July 2026 letter, although the purpose and intention of the pragmatic scenario are considered to show alignment with those recently encouraged by Central Government.

7.50 The pragmatic appraisals prioritise the essential infrastructure stipulated in Paragraph 1, parts a-d of Strategic Policy 13. This means that there are fixed costs to meet the water efficiency standard in Policy SC3 (1a), and index-linked contributions towards improvements to the strategic or local highways network in Policy SP10 (1d). The drainage strategy and SuDS (1b) are considered implicit within the external works allowance, whilst flood risk prevention, adaptation or mitigation (1c) would be deemed site-specific abnormal costs (and therefore expected to be compensated through a reduced land value at the decision-taking stage).

7.51 Policy SP13 continues to state that, in instances where the essential infrastructure requirements would result in less affordable housing delivery, a cascade adjustment to the affordable housing requirement will be acceptable (subject to a viability review mechanism). As such, we have first tested the pragmatic scenarios assuming no on-site affordable housing delivery to understand the impact of the essential infrastructure on viability. Thereafter, we have then sought to identify the maximum viable levels of affordable housing which can be delivered whilst prioritising the delivery of the essential infrastructure in Paragraph 1 of Strategic Policy 13.

7.52 All other policy contributions have been removed as per Scenario B, save for those which are sought by national policy or building regulations (i.e. BSL, BNG and FHS).

7.53 The pragmatic appraisals therefore present multidimensional scenarios which build upon the one-way sensitivity analyses in Scenarios A & B, making the following adjustments:

- **Lower Quartile BCIS Costs** – Further interrogation of the most recent cost data published by BCIS for Hastings shows a substantial increase in the past 12-24 months, and also when compared with neighbouring authority areas. The median rates published within a 5-year sample are observably higher than the equivalent rates published for East Sussex, as well as those for Lewes, Wealden, Eastbourne and Rother.

  It is not possible to interrogate the individual developments which have informed the 5-year sample in Hastings to understand why the rates are higher than those in the surrounding areas. It may be that the cost information submitted to BCIS

[60] Viability PPG, 2025. Paragraph: 011 Reference ID: 10-011-20180724.

includes allowances for site-specific abnormal costs to overcome constraints which are a consideration in Hastings, such as ground stability, coastal defence and flooding. As promoted in the PPG and RICS Standards, any such costs should then be reflected in the Benchmark Land Value.

On balance, the lower quartile rates published in the most recent sample for Hastings are more aligned with the median rates observed across neighbouring authorities and East Sussex. Hence, the pragmatic appraisals instead replace the median BCIS costs with the lower quartile rates for consistency with other, larger data samples.

As a further sense check, we have also index-linked the previous cost data used to inform the base build costs assumed in the Summer 2024 draft viability assessment. We have referred to the BCIS All-in Tender Price Index, which indicates that base build costs could be lower than the median rates published in the most recent BCIS sample for Hastings, and more aligned with the latest rates published for neighbouring authorities.

- **Benchmark Land Value** – historically, average property prices in Hastings for all types have trended below those observed nationally. Over the past 5-years, the gap between the averages has widened. It is therefore a reasonable expectation that the premiums required to incentivise landowners to release sites in Hastings should be lower when compared with areas which achieve higher average property values. We have therefore sought to adjust the BLVs to promote a more viable balance between developer contributions, infrastructure costs and landowner expectations, particularly in areas where market values are more constrained.

  For greenfield sites, the pragmatic appraisals assume lower BLVs of £100,000 per acre in the lower value zone and £135,000 per acre in the mid value zone. This stepped adjustment aligns with the findings of our residential market research whilst retaining landowner premiums within the commonly quoted range of 10 – 20x EUV, assuming existing use values of c. £10,000 per acre (as observed in our land market paper).

  For brownfield sites, we have undertaken a more detailed review of the sites being considered for allocation within the plan, including the existing uses, condition and obsolescence. This has shown that a reasonable proportion of the sites lack an existing use from which a BLV can be informed, including a number of derelict or vacant buildings, cleared sites and those with temporary operations. In turn, the baseline assumption of £400,000 per acre, which is higher than that stated by MHCLG for land in industrial use in Hastings (i.e., EUV), may artificially overstate the existing use value of some of these sites.

  Instead, it is expected that the value of these sites lies in the development potential to an alternative use – namely, residential. The Viability PPG allows for BLVs to be informed using the Alternative Use Value approach, which is commonly determined by adopting undertaking a residual appraisal which captures all relevant policy requirements, however this presents a circular viability argument for plan-making purposes. Accordingly, we have referred back to the evidence obtained from our market review for residential development land. Whilst limited, this has shown minimum incentives to release brownfield land for development in Hastings of c. £135,000 per acre. This is lower than the greenfield BLVs adopted in our pragmatic approach, so we have instead adopted

a reduced brownfield BLV of £200,000 per acre – balancing the lack of existing use and obsolescence of sites against the minimum incentives demonstrated in our land value review.

This approach is supported by the extracts from examiners' reports referred to in Table 4.1, along with the observations made in Paragraphs 4.28 - 4.29. We would also reiterate that BLVs should not be assumed to equate to market values. BLV is based on PPG requirements and a prescribed method that may not accord with assumptions and methods used to assess the price to be paid for land in the marketplace at any particular point in time. The BLV is a benchmark value against which the developer contributions can be assessed.

- **Density** – The list of sites provided by the Council includes information on the expected capacity and gross site area. Whilst informed assumptions regarding net-to-gross adjustments have been made, some sites result in densities which fall below those sought in the Pre-Submission Draft Local Plan. Where this is the case, densities have been increased so they are consistent with those demonstrated in Figure 7 of the emerging Local Plan. This includes minimum assumed densities of 30 dph for housing sites, 50 dph for housing and flats, and 70 dph for flatted schemes.
- **Affordable Housing Tenure Mix** – We have assumed the 70% rented contingent is delivered exclusively as affordable rent, removing the 35% share of social rent assumed in the baseline appraisals. The remaining 30% is retained as shared ownership.

7.54 The remaining cost and value assumptions remain unchanged from both the Scenario A and B appraisals, including the profit thresholds.

7.55 It is important to reiterate that plan-wide viability assessments operate at a strategic, authority-wide level. Using a typology approach, sites are grouped by shared characteristics, with cost and value assumptions adjusted by value zone. At the planning application stage, more granular detail becomes available to account for site-specific factors, such as abnormal costs, existing use values and densities. Therefore, while this pragmatic assessment considers overall viability across Hastings, any site-specific deviations from Scenario C's assumptions can be fully considered at the decision-making stage.

7.56 Table 7.16 summarises the outcomes of the Scenario C pragmatic appraisals. For clarity, these include costs for the essential infrastructure in Policy SP13, but no on-site affordable housing.

Source: 260915 Hastings WPV Residential Appraisal Summary Sheet_v1.1

7.57 With the adjusted inputs outlined in Paragraph 7.50, the Scenario C appraisals show an improvement in viability, with most typologies capable of delivering the essential infrastructure requirements of Policy SP13. The challenges remain evident in some instances, in that some typologies remain unviable without any affordable housing contributions. The viability of brownfield sites, which account for the majority of those

being considered as part of the plan-making process, also remains challenging. This reinforces the need for the Council to allow for flexibility in their plan policies.

7.58 In line with the affordable housing cascade set out in Policy SP13, we have then sought to identify the maximum viable on-site affordable housing contribution which can be made on typologies which are shown as viable in Table 7.16, up to the existing policy requirements of 40% on greenfield sites and 25% on brownfield. The outcomes are summarised in Table 7.17.

Table 7.17 – Max. Viable Affordable Housing (Scenario C)

Source: AspinallVerdi, 2026.

7.59 In some instances, the pragmatic appraisals can support affordable housing contributions in excess of those which are currently targeted by the adopted policy. The Greenfield typologies range from 0 – 40%, whilst the viable brownfield typologies can support contributions equivalent to 2 – 25%. It is noted that a number of the smaller typologies of less than 10no. units can support affordable housing contributions in excess of the current policy requirement, which may support the

Council's intention to seek contributions on smaller sites (i.e. below the major development threshold).

7.60 As with the Scenarios A & B, the pragmatic appraisals show that it is not possible to introduce a viable CIL charge for residential development in Hastings.

7.61 Copies of the Scenario C pragmatic appraisals are provided in Appendix 13.

Older Persons' Housing Typologies (GG-JJ)

7.62 The following tables summarise the viability results of the older persons' housing typologies. As explained earlier, we have adopted a single value zone approach across Hastings as this type of accommodation does not typically vary as much as general needs market housing. The following scheme types and sizes have been appraised.

Table 7.18 - Older Persons' Housing Appraisals

Appraisal REF	Typology REF	Land Type	Development Type	No. Units
GG	OP_GF_1	Greenfield	Retirement / age-restricted	75no. Flats
HH	OP_GF_2	Greenfield	Extra Care	60no. Flats
II	OP_BF_1	Brownfield	Retirement / age-restricted	75no. Flats
JJ	OP_BF_2	Brownfield	Extra Care	60no. Flats

Source: AspinallVerdi, 2026.

7.63 As noted earlier, there are no sites within the list used to inform the typologies which are specifically expected to deliver older persons' housing. Hence, the appraisals contained within this section are based on hypothetical development scenarios informed by schemes delivered elsewhere, our experience of site-specific viability assessments and feedback received from our stakeholder consultations.

7.64 Copies of the full appraisals are provided in Appendix 14.

Older Persons' Housing Results Summary

7.65 Table 7.19 shows that the development of older persons' accommodation is unviable with the updated policy requirements. The starting point was to assume the same affordable housing thresholds sought in the market sale appraisals (i.e. 40% on greenfield, 25% on brownfield), however this was shown to be unviable. We then incrementally adjusted the amount of affordable housing to establish the viability tipping point, however in most appraisals this did not influence the fundamental outcome / RAG rating of the typologies tested. As such, the Council may need to take a flexible approach to policy requirements for this type of development. It is also not possible to introduce a viable CIL charge for this type of development.

7.66 The development of older persons' housing includes a number of additional costs and adjustments to the appraisals which reduce viability when compared with conventional market sale development, including:

- Longer sales periods, which in turn negatively impact the cash flow and increase development finance costs as income takes longer to realise;
- A liability for the developer to pay empty property costs on the unsold units;
- The buildings are typically less efficient, with a reduced net-to-gross adjustment applied to flatted units to account for common areas, larger circulation space, and other amenities. This means there is less income-generating floorspace;
- The base construction costs are higher than market sale flatted accommodation, which is then further compounded by the net-to-gross adjustment;
- Disposal costs are higher (marketing, agency, legal etc.);

7.67 Whilst the viability of older persons' housing is shown to be more challenging, we note that there are no specific sites which are designated exclusively for this use. Instead, the typologies are based on hypothetical schemes informed by reference to capacities and sizes which have been delivered by the market elsewhere. Accordingly, it may be that viability is improved subject to specific design and location within Hastings Borough.

7.68 We are also mindful of the observations made in Paragraph 5.44 in respect of the layered costs and potential overcompensation. This is relevant for older persons' housing, as the base build cost may already include the additional requirements to meet certain design, access or space standards, and may therefore overcompensate in areas such as circulation space and plant rooms.

7.69 Nonetheless, the appraisal outcomes are not inconsistent with our recent experience of undertaking independent viability reviews for older persons' housing schemes at the decision-taking stage, albeit in areas outside of Hastings. It is noted that in many instances, developers have been willing to make off-site affordable housing contributions in lieu of on-site provision for this type of accommodation. We also understand that this type of development has been delivered in the surrounding areas in recent years, which suggests that viability may not be as significant a concern as demonstrated through the typologies tested. Accordingly, the Council may wish to allow for flexibility in their policy wording regarding affordable contributions for Older Persons' Housing but with the ability to negotiate site-specific contributions at the application stage (i.e. on a case-by-case basis).

Build to Rent Appraisals (KK – NN)

7.70 Table 7.20 summarises the build-to-rent typologies assumed in the testing.

Table 7.20 - Build to Rent Typologies

Appraisal REF	Typology REF	BTR Type	Site Type	No. Units	Size Site (ha)	Density
KK	BTR_GF_1	Multifamily	Greenfield	150	1.0	150 dph
LL	BTR_GF_2	Single family	Greenfield	150	5.0	30 dph

NN	BTR_BF_2	Single family	Brownfield	150	4.1	36 dph

Source: AspinallVerdi, 2026.

7.71 As with the older persons' housing typologies, we understand there are no sites being considered as part of the plan making process which are expected to come forward for BTR development specifically. The typologies developed are therefore designed to be representative of typical developments, but may change subject to exact type, design and location within Hastings.

7.72 Copies of the full appraisals are provided in Appendix 15.

Build to Rent Appraisal Summary

7.73 The build-to-rent appraisals assume the full suite of policy requirements as set out in the Pre-submission Draft Local Plan, along with affordable housing at 40% on greenfield sites and 25% on brownfield. It is assumed that these units will be delivered as affordable private rent at a discount of 20%, in line with the Build to Rent PPG,

7.74 Table 7.21 shows that all BTR typologies are unviable across both greenfield and brownfield sites. The multifamily typologies are less viable, as they are effectively blocks of flatted units with adjustments for on-site resident facilities and amenities. Much like the market sale flatted typologies, these appraisals are subject to higher base build costs and net-to-gross adjustments which make viability more challenging.

7.75 The single family BTR typologies are also unviable with reduced deficits. The uplift when compared with the multifamily BTR typologies is explained by the reduced base build costs, improvement in net-to-gross (i.e. as houses) and reduced management costs, however this is still unable to support the emerging policy requirements in the Pre-submission Draft Local Plan.

7.76 Build to Rent / Private Rented Sector development is a distinct asset class which differs from traditional housebuilding (i.e. speculative build to sell). As such, the assessment of viability can be adapted from the traditional approach to account for differences in how BTR development is operated, managed, funded, delivered and disposed.

7.77 BTR developments are often forward-funded / forward sold, meaning investors provide capital upfront to fund the development. The landowner / developer will develop proposals for the scheme, often working closely with an investor partner and then will deliver the scheme on a development management basis. Upon completion, the investor purchases the completed development, assuming ownership and long-term rental income. This offers several advantages, including reduced financial risk for the developer, accelerated project timelines, and a more predictable return for the investor, and has become increasingly popular in the UK's build-to-rent sector.

7.78 For the purpose of this assessment, we have assumed that the developments are delivered speculatively and hence the appraisals do not reflect the benefits of a forward funded scheme. Instead, they have assumed that they will be delivered as a stabilised asset, which incurs higher finance costs, a stabilisation period, higher profit and a yield adjustment when compared with a forward-funded scheme. As such, it may be that the viability of any BTR development improves subject to how specific schemes or sites are delivered, funded and disposed of in Hastings.

7.79 The South East of England is experiencing an emergence of Single Family Housing (SFH) BTR developments, representing a shift from the sector's traditional focus on urban apartment schemes. This is driven by higher regional house prices and elevated mortgage rates, which have pushed professional families and middle-income households into the rental market. Investors are capitalising on this demand by delivering purpose-built, high-quality, professionally managed rental houses in commuter towns and suburban locations, offering stable long-term tenancies and modern, energy-efficient homes, thereby expanding the BTR model to cater to the family demographic.

7.80 As such, it may be prudent for the Council to ensure it is possible to negotiate affordable housing on certain sites, should they come forward. It may be practical to rely on the national policy requirement set out in the BTR PPG as opposed to setting a Borough-specific threshold.

8 Non-residential Viability Results

8.1 This section sets out the results of the non-residential typologies, including employment, retail and office uses. The policy ask for employment development is less onerous than that for residential but still retains costs for S106 contributions, biodiversity net gain, net zero carbon and urban greening factor. The appraisals have also considered the potential to introduce a CIL charge on non-residential uses.

Employment Typology Results Summary

8.4 The employment typology results are mixed. Employment development on greenfield is shown to be more viable than the brownfield sites, with all but one showing a surplus above the benchmark land value. The sole greenfield typology shown as marginal is the largest site and generates a relatively small deficit equivalent to less than 1% of the development costs. Hence, we expect that the majority of greenfield employment sites being considered within the plan are capable of delivering the emerging policy requirements – namely BNG, net zero carbon and S106 contributions.

8.5 Brownfield employment development is again challenging, with none of the sites shown as viable. The three smallest brownfield typologies are marginal, and are shown to become viable with a c. 10% reduction in build costs, or 10% increase in GDV. For the largest brownfield typology, which is shown as unviable with all policy requirements fixed in the appraisal, more substantial adjustments of +/- 30% are required to become viable.

8.6 The deficits generated in the brownfield appraisals represent the funding gap required to be bridged for the emerging policies to become viable. These range from £16,427 - £1,772,787, or £55 - £317 psm.

8.7 For the viable greenfield sites, we have sought to understand the maximum CIL charge which can be sought whilst remaining viable. This shows that maximum rates of between c. £92 - £218 psm could be levied, although this does not allow for a buffer against market movements. A charge of c. £55-£60 psm could therefore be appropriate whilst retaining a buffer of c. 35-40% on the maximum rate, however the administration of introducing CIL solely for specific employment developments may prove overly onerous when considering the wider factors (e.g. implementation, monitoring, enforcement, resourcing etc.).

8.8 As with the residential appraisals, the Council may need to take a flexible approach to policy requirements concerning employment development on brownfield sites to ensure they remain deliverable.

Non-residential Typology Appraisals

8.9 The following tables summarise the outcomes of the non-residential typologies. Table 8.4 summarises the uses tested.

Table 8.4 - Non-residential Typology Appraisals

REF	Land	Use	GIA (sqm)

Non-residential Typology Results Summary

8.11 The outcomes of the non-residential typologies are variable, with most appraisals shown as unviable. As with the employment appraisals, these include costs for S106 contributions, biodiversity net gain, net zero carbon and urban greening factor.

8.12 The two viable typologies are those designed to be reflective of a larger supermarket development. These benefit from stronger investment yields which increase the GDV to a level where the policy requirements can be sought. The remaining retail typologies across both greenfield and brownfield sites are shown to be unviable.

8.13 Office uses are also unviable. This is not inconsistent with similar testing across other authority areas, where the base build costs are higher and recent market conditions have weakened investment yields.

8.14 The Council may also need to be flexible in their policy requirements for retail and office developments expected to come forward over the plan period. As with employment uses, it is not possible to introduce a viable CIL charge on most non-residential uses.

9 Conclusions and Recommendations

9.1 In this section, we draw together the recommendations from the viability testing.

Residential

9.2 Our residential typology testing has shown that flexibility and pragmatism will be required in the application of policy requirements in the emerging Local Plan to ensure that development remains viable and deliverable in Hastings.

9.3 The Scenario A baseline appraisals have shown that viability is challenging across all three value zones, with only two of the 32no. typologies shown as viable. These appraisals include all fixed policy costs sought in the Pre-Submission Version (Regulation 19) Draft Local Plan, Section 106 contributions of between £3,000 - £6,700 per unit, and affordable housing at 40% on greenfield sites and 25% on brownfield.

9.4 The Pre-Submission Draft Local Plan introduces a number of additional policy requirements which are not sought in the adopted development plan, including those for M4(2)/M4(3) accessibility requirements, net zero, water efficiency standards and urban greening factor. The introduction of these policies reduces viability margins by increasing development costs. When coupled with the mandatory requirements of the Building Safety Levy (BSL), biodiversity net gain (BNG) and Future Homes Standard (FHS), the development costs increase further, and this provides some explanation as to why there is a lack of viability in the Scenario A appraisals.

9.5 We then sought to identify the impact of removing the costs associated with policies in the Pre-submission Draft Local Plan. The Scenario B appraisals removed all policy costs, including affordable housing and S106 contributions, whilst retaining those which are mandated by national policy or building regulations (i.e. BSL, FHS, BNG). With the majority of policy requirements removed from the Scenario B appraisals, viability is shown to improve, however the majority of typologies remain unviable or marginal.

9.6 Drawing on the methodologies established in the viability assessments supporting the Local Plans in The Wirral and Central Lancashire, and substantiated by the ministerial direction in Matthew Pennycook MP's July 2026 letter to the Planning Inspectorate, we then tested a third scenario which adopted a pragmatic approach to viability (Scenario C). This was also supported by LPMR data which demonstrated that, in spite of recent market conditions characterised by subdued house price growth and cost inflation, Hastings has shown continued and strengthened housing delivery in recent years (including both market sale and affordable housing).

9.7 The pragmatic appraisals prioritise the essential infrastructure stipulated in Strategic Policy 13 as fixed costs, whilst allowing for lower affordable housing contributions to be sought where viability margins are reduced as a result. As with the Scenario B appraisals, all other policy contributions were removed save for those sought by national policy or in building regulations. In addition to the policy flexibility, adjustments were also made to the base build costs, benchmark land values, densities and affordable housing tenure mix as part of the pragmatic approach.

9.8 The Scenario C appraisals demonstrate that, in some instances, typologies could support affordable housing contributions in excess of the thresholds currently sought in the adopted Local Plan in Hastings. The outcomes were shown to vary subject to the location (value zone), development and land type, however viable greenfield typologies

could support contributions ranging from 0 – 40%, whilst brownfield could support contributions equivalent to 2 – 25%.

9.9 It is important to recognise that the viability challenges demonstrated across Scenarios A & B remained for certain typologies in Scenario C, in that some remained unviable without any affordable housing contributions. The viability of brownfield sites, which account for the majority of those being considered as part of the plan-making process, also remained challenging. This reinforces the need for the Council to allow for flexibility in their plan policies.

9.10 In light of the above, Table 9.1 sets out our recommendations arising from the residential typology testing. Across all typologies and scenarios, the testing has shown that it is not possible to introduce a viable CIL charge for residential development in Hastings at this time.

Table 9.1 - Residential Viability Results Summary

Site Type	Recommendations
Greenfield	**Up to 40% affordable housing,** subject to the requirements of Policy SP13. Based on Scenario C pragmatic appraisals.
Brownfield	**Up to 25% affordable housing,** subject to the requirements of Policy SP13. Based on Scenario C pragmatic appraisals.

Source: AspinallVerdi, 2026.

9.11 We highlight that the viability of brownfield sites is influenced by higher Benchmark Land Values, remediation costs and interest rates as well as the increased build costs that most developments are experiencing, especially smaller schemes which incorporate median BCIS. Flatted development, which is expected to be more common on brownfield sites in Hastings, is also shown to be less viable than sites that deliver solely housing. Flatted development costs are higher on a £ / psm basis and also require an adjustment to account for common areas such as entrance halls, plant rooms and circulation space. It is expected that the combination of these higher / additional costs explains why flatted development on brownfield land is less viable.

9.12 We note that, across the plan period, both land values and build costs are likely to experience changes, which may lead to a shift in the viability position. All things being equal, if costs increase due to (say) higher design standards, then the value of the land on a residual basis should reduce. To a certain extent this is an inevitable consequence of higher building standards. However, if the cost is too great or not phased in over an appropriate time frame, the impact on the land value could be too great and stymie development.

9.13 Additionally, on brownfield land, Vacant Building Credit will occasionally apply where vacant buildings are cleared to make way for new development. This generates a reduction in the affordable housing requirement for these sites, making them more viable. Where “in use” existing buildings are redeveloped, this also generates relief against affordable housing which can also increase the viability of brownfield development. These aspects cannot be factored into typology appraisals which means they often represent the “worst case” in viability terms. This has been considered as part of our recommendations.

9.14 The above-recommended Affordable Housing targets are based upon a holistic assessment which considers:

- the detailed research and analysis here-in;
- consultation with Hastings Borough Council;
- the appraisal results and three scenarios tested;
- the series of sensitivity tables which we have prepared for each of the typologies; and,
- the interpretation of advice received by Hastings Borough Council from Counsel.

9.15 In particular, the sensitivity tables (see Viability Modelling Best Practice and 'How to Interpret the Viability Appraisals' in Section 4 above) assist in the analysis of viability and to appreciate the sensitivity of the appraisals to key variables such as: Affordable Housing %; S106 Costs; BLV and profit; and, to consider the impact of rising construction costs. This is to de-emphasise the BLV in each typology and help consider viability 'in-the-round' i.e., in the context of sales values, development costs, contingency, and developer's profit which make up the appraisal inputs. One has to appreciate that the typologies cannot possibly model every single actual development scheme that may come forward, and the sensitivity tables show where the margins of viability are (based on the baseline appraisal assumptions) and where buffers can be found e.g., developer profit, BLV, contingency etc.

Older Persons' Housing

9.16 Older persons' accommodation is less viable than general needs accommodation due to the higher marketing costs, longer sales periods, reduced building efficiency and higher base build costs. Our appraisals have shown that older persons' housing is unviable at the same thresholds identified for market sale housing. The majority of older persons' housing typologies remain unviable when the affordable housing contribution is reduced to 0%. The Council may therefore need to be more flexible in their approach to affordable housing and other policy contributions on this type of accommodation.

9.17 The appraisal outcomes are not considered inconsistent with our recent experience of undertaking independent viability reviews for older persons' housing schemes at the decision-taking stage, albeit in areas outside of Hastings. It is noted that in many instances, developers have been willing to make an off-site affordable housing contribution in lieu of on-site provision for this type of accommodation. Accordingly, the Council may wish to allow for flexibility in their policy wording regarding affordable contributions for Older Persons' Housing but with the ability to negotiate site-specific contributions at the application stage (i.e. on a case-by-case basis).

9.18 Please note, none of the sites within the plan are expected to specifically deliver older persons housing developments, and hence the typologies developed within this assessment are hypothetical. In this respect, viability may improve subject to site-specific design and location within Hastings.

Build-to-Rent

9.19 The PPG acknowledges that the economics of BTR schemes differ from build for sale in that they are less viable. Our appraisals have tested both multifamily flatted BTR

developments, as well as single family housing schemes. The results are mixed, with multifamily BTR showing a similar trend to other flatted typologies tested. Viability improves with the single family housing BTR typologies, however the fundamental outcome is the same in that the cumulative policy costs sought in the Pre-submission Draft Local Plan render development unviable.

9.20 Build to Rent / Private Rented Sector development is a distinct asset class which differs from traditional housebuilding (i.e. speculative build to sell). As such, the assessment of viability can be adapted from the traditional approach to account for differences in how BTR development is operated, managed, funded, delivered and disposed. It may be that the viability of any BTR development improves subject to how specific schemes or sites are delivered, funded and disposed of in Hastings. As suggested in the PPG, for individual schemes, developers may propose alternatives to the policy such as variations to the discount and proportions of affordable private rent units across a development.

9.21 Given the variance in outcomes, coupled with the fact that no sites are specifically allocated for BTR development, the Council may wish to omit a BTR-specific requirement in their affordable housing policy, or alternatively, mirror national policy in the Local Plan. In the absence of any BTR specific policy, the Council have assurance that affordable housing can be negotiated and secured on BTR developments in line with the NPPF and PPG (i.e. 20% affordable private rent, provided at a 20% discount to market rent).

Employment & Non-residential

9.22 The policy asks for employment and non-residential development are reduced when compared with residential development. These appraisals have included the costs to meet 10% biodiversity net gain, net zero carbon, urban greening factor (where applicable) and Section 106 contributions.

9.23 The employment typologies, which are based on sites being considered as part of the plan-making process, show mixed results. Employment development on greenfield is shown to be more viable than the brownfield sites, with all but one showing a surplus above the benchmark land value. The sole greenfield typology shown as marginal is the largest site and generates a relatively small deficit equivalent to less than 1% of the development costs. Hence, we expect that the majority of greenfield employment sites being considered as part of the plan-making process are capable of delivering the emerging policy requirements – namely BNG, net zero carbon and S106 contributions.

9.24 Brownfield employment development is again challenging, with none of the sites shown as viable. The three smallest brownfield typologies are marginal, and are shown to become viable with a c. 10% reduction in build costs, or 10% increase in GDV. For the largest brownfield typology, which is shown as unviable with all policy requirements fixed in the appraisal, more substantial adjustments of +/- 30% are required to become viable.

9.25 For the viable greenfield sites, we have sought to understand the maximum CIL charge which can be sought whilst remaining viable. This shows that maximum rates of between c. £92 - £218 psm could be levied, although this does not allow for a buffer against market movements. A charge of c. £55-£60 psm could therefore be appropriate whilst retaining a buffer of c. 35-40% on the maximum rate, however the administration of introducing CIL solely for specific employment developments may

prove overly onerous when considering the wider factors (e.g. implementation, monitoring, enforcement, resourcing etc.).

9.26 As with the residential appraisals, the Council may need to take a flexible approach to policy requirements concerning employment development to ensure sites remain deliverable.

9.27 The non-residential typologies tested a series of different retail and office uses but were not based on any specific sites or allocations in the plan. The outcomes are shown to be variable, with most unviable. The two viable typologies are those designed to be reflective of a larger supermarket development. The remaining retail typologies across both greenfield and brownfield sites are shown to be unviable.

9.28 Office uses are also unviable. This is not inconsistent with similar testing across other authority areas, where the base build costs are higher and recent market conditions have weakened investment yields.

9.29 The Council may also need to be flexible in their policy requirements for retail and office developments expected to come forward over the plan period. As with employment uses, it is not possible to introduce a viable CIL charge on most non-residential uses.

Best Practice

9.30 We recommend that, in accordance with best practice, the plan viability is reviewed on a regular basis to ensure it remains relevant as the property market cycle(s) change.

9.31 Furthermore, to facilitate the process of review, we recommend that the Council monitor the development appraisal parameters herein, particularly data on land values/value zones, delivery rates and grant funding within their area.

Appendix 1 – Policy Matrix

Hastings Borough Council Draft Local Plan Pre-submission Version (Regulation 19) – Policies Matrix

This matrix sets out the policies set out in the Hastings Borough Council Draft Local Plan Pre-submission Version (Regulation 19) and describes how we have incorporated the cumulative impact of the policies into the viability assessment. The matrix signposts the reader to particular cost and value evidence which reads across into the financial appraisals.

- Those policies with a **Direct impact** on viability include policies such as affordable housing, minimum housing standards, carbon reduction, accessibility etc. These are the policies that have a quantifiable impact on viability and have been explicitly factored into our viability appraisals through policy-specific cost and value assumptions or fees etc.
- Those policies with an **Indirect impact** have been incorporated into the viability study indirectly through other assumptions adopted e.g. market values, benchmark land value, BICS costs, percentage-based allowances, professional reports / studies, planning evidence etc.

It is important to note that the majority of typical plan policies have an indirect impact on viability. The Draft New Local Plan sets the 'framework' for the property market to operate within. All the spatial policies have an indirect impact on viability through the operation of the property market (price mechanism).

Some policies are for very narrow, specific circumstances of Development Management. These policies have no material impact on the value and cost assumptions for the viability Plan-making viability assessment.

Policy	Relevant Extracts / Summary	Notes	Impact
Strategic Policy 1 (SP1): Directing Growth	• The Council will prioritise sites for development which are brownfield and offer regeneration opportunities. The Council will allocate greenfield sites where these are sustainably located and well-related to the existing urban area. • The delivery of at least 2,970 net new homes over the plan period. • The Council will allocate land to provide for additional employment floorspace with the aim to actively protect and intensify industrial land. • Protected green, open and recreational spaces will be safeguarded from development. • The primary location for a range of uses including larger scale office functions, leisure offers, visitor accommodation, cultural and retail development, and appropriate education facilities should be Hastings Town Centre. Whilst smaller scale development, appropriate to its context and the character of area, are directed to District and Local Centres.	• The typologies developed within the testing are based on the list of sites provided by HBC and have been varied by land type. • Employment typologies have also been developed based on the sites included within the plan. • We have developed generic typologies which are not informed by specific sites expected to come forward but are instead based on our experience of testing a range of conventional commercial uses including retail and office. • The testing has been varied by value zone to capture different market areas demonstrated across the settlement hierarchy.	Direct
Strategic Policy 2 (SP2): New and Affordable Housing	• Between 2023-2041 the net new homes target will be at least 2,970 • There is potential for additional new homes to be delivered through Regeneration Areas and the Development Potential Area • Windfall housing development will be supported where it is consistent with other Local Plan policies. • Development proposals will be expected to maximise site potential having regard to the Council's Density Zones. There is no maximum density unless justified, and under-development of sites will be resisted. • The council will require affordable housing as part of new residential developments unless agreed otherwise. - 25% affordable housing on Brownfield Sites - 40% affordable housing on Greenfield Sites	• As above, the typologies developed within the testing have been primarily informed by the list of sites provided by HBC which are expected to come forward for development. • To ensure breadth in the testing, we have also developed generic typologies to ensure a variety of site types and sizes are considered. • Our residential appraisals have sought to establish the maximum viable affordable housing contribution which can be sought amongst all other policy requirements and developer contributions. The starting point has	Direct

Policy	Relevant Extracts / Summary	Notes	Impact

	• Where affordable housing is a policy requirement, the council will expect a tenure mix in line with the requirements set out in Table 3:
	  ○ 70% affordable rent / social rent
	  ○ 30% affordable home ownership
	• The required dwelling mix for rented affordable homes is set out in Table 4 of Policy SP2.
	• The Council will encourage schemes that exceed the minimum affordable housing requirements, subject to an appropriate housing and tenure mix.
	• Eight permanent pitches for Gypsy and Travellers are required over the Plan period.
	• Where specialist housing for older people is provided as private provision, including within a residential care home setting, the council will take in to account the characteristics of the scheme in determining a proposal, and where the proposal is considered to be, or to contain Class C3 accommodation, then affordable housing or a financial contribution will be expected to be provided in accordance with the requirements set out above.
		been to assume the levels in the draft policy of between 25 – 40%.
		• The tenure mix adopted in the appraisal is consistent with that specified in SP2.
		• The affordable housing unit mix adopted in the appraisals is consistent with that specified in SP2.
		• The testing has included typologies which are representative of older persons housing development.	

Strategic Policy 3 (SP3): Business Development – Office and Industrial	• The Plan identifies a need for 70,400 sqm of business floorspace by 2041, of which 19,830 sqm will be delivered through employment allocations located within Strategic Industrial Employment Areas. • The Council will support the protection, intensification and expansion of employment land and premises and seeks to deliver 4,750 new jobs by 2041. • Hastings Town Centre is the primary location for new office development, including flexible and shared workspace.	• The viability testing includes employment typologies based on the proposed allocations in the Draft Local Plan.	Direct

Policy	Relevant Extracts / Summary	Notes	Impact
Strategic Policy 4 (SP4): Business Development – Town Centres	• Hastings Town Centre is the primary focus for larger-scale town centre development, with district and local centres retained and enhanced according to their role and function. • Proposals for retail development which are greater than 300 sqm (Convenience retail) and 200 sqm (Comparison retail), will be required to carry out an impact assessment. Other main town centre uses will be required to carry out impact assessments in line with the requirements of the NPPF.	• Retail impact assessments are assumed to be covered by a combination of planning costs and professional fees allowances (where required / on qualifying sites).	Indirect
Strategic Policy 5 (SP5): Meeting the Challenge of Climate Change	• Proposals must contribute to the council's aim to make Hastings carbon neutral ahead of the UK target of 2050. Development will be supported where it can be demonstrated that it would not contribute towards climate change and that it incorporates adequate adaptation and mitigation measures to ensure future resilience. • Proposals involving existing buildings must prioritise retrofit over re-build, thoroughly exploring the potential for refurbishment and improvements in performance. • Proposals for new buildings must be designed and built to be Net Zero Carbon. They must be ultra-low energy buildings, be fossil fuel free, generate renewable energy on-site, and report embodied carbon. • Where feasible and viable, new development should deliver 100% of operational energy demand through on-site renewable energy, minimise water consumption and calculate/report whole-life carbon.	• The typologies included within the testing include sites where the council have specified that retrofit / refurbishment of the existing premises is expected over new-build development. We have therefore included typologies based on existing conversions and adjusted the cost and value inputs as necessary. • The appraisals include costs advised in the Net Zero Policy – Technical Evidence Base (July 2026) by Introba and Currie & Brown.	Direct
Strategic Policy 6 (SP6): Renewable and Low Carbon Technologies	• The Council will take a positive approach to proposals for new development which are either for or include renewable energy generation, zero carbon technologies and their supporting infrastructure.	• This policy is regarding low-carbon Renewable Energy infrastructure for the production of energy. There is no impact on plan viability (the availability of energy	Indirect

Policy	Relevant Extracts / Summary	Notes	Impact
	• The Council will support decentralised energy networks, community energy initiatives and area-wide low carbon heating solutions where environmental impacts are minimised and energy affordability can be demonstrated. • The Council will support improvements to utilities infrastructure to facilitate the adoption of low and zero carbon technologies.	is a matter for national government policy). • We have included the cost uplift advised by Introba and Currie & Brown, which is expected to include the technologies required to meet net zero carbon.	
Strategic Policy 7 (SP7): Protecting and Enhancing the Historic Environment	• Importance will be placed on development proposals making a positive contribution to the architectural quality, historic character, local distinctiveness, and sense of place of historic buildings and areas. Heritage assets should be conserved in a manner appropriate to their significance. This means that the higher the value of the heritage asset the more consideration will be given to maintaining its heritage significance. • The Council will protect designated and non-designated heritage assets, support the sensitive restoration and reuse of historic buildings, and give great weight to avoiding harm to heritage significance.	• Heritage assets (e.g. conservation areas) tend to have bespoke/higher values which offset some of the design enhancements. • Conservation and restoration projects would be subject to site-specific appraisal e.g. for Optimal Viable Use (under the NPPF). This is referenced in the Policy. • Site-specific assessment will determine the extent of policy contributions that can be made and balance this against the interests of preserving or restoring heritage assets – see NPPF Para 212.	Indirect

Strategic Policy 8 (SP8): Conserving and Enhancing the Natural Environment	• The council will protect and enhance the town's distinctive landscape character and natural environment and increase opportunities for people to engage with nature. This will be achieved by:…
	  ○ Providing net gains for biodiversity including establishing coherent ecological networks that are more resilient to current and future pressures.
	  ○ Supporting projects that protect and enhance the network of green and blue infrastructure across the Borough, including publicly accessible open spaces and 'urban fringe' areas
		• The appraisals include the costs of meeting 10% biodiversity net gain as stipulated in Policy SC10.
		• The typologies have made adjustments to reflect the difference in net developable area and gross site area. External works allowances are also included alongside the BNG costs. The combination of these adjustments and costs is expected to mean that some
			Direct

Policy	Relevant Extracts / Summary	Notes	Impact
	which capitalise on the benefits to health and wellbeing and mitigating climate change.	protection and enhancement of open spaces are implicit within the appraisals. • The appraisals also include contributions to open space in line with Policy ID1 (on qualifying sites).	
Strategic Policy 9 (SP9): Managing Coastal Erosion and Flood Risk	• The development and improvement of flood defence infrastructure and drainage assets in Hastings will be supported, including Natural Flood Management measures for the management of fluvial flooding subject to appropriate environmental impact assessment.	• Sites in areas subject to coastal erosion and flood risk would be reflected in adjustments to the land value. Where reinforcement or upgrades are required, it is expected that this will be deducted from the land value as an abnormal cost. • Environmental impact assessments are assumed to be covered by a combination of planning costs and professional fees allowances (where required / on qualifying sites).	Indirect
Strategic Policy 10 (SP10): Transport Infrastructure	• Over the lifetime of the Plan, in order to deliver sustainable development, the council will work proactively with transport providers and partners to enable the delivery of infrastructure and services which supports development growth, economic connectivity including through the prioritisation of active travel and public transport to support carbon neutral objectives. This will include the council securing development contributions to help meet these objectives. • The Council will support improvement to rail, bus, walking, wheeling and cycling infrastructure, the uptake of ultra-low and zero-emission vehicles, and also highway improvements that support sustainable growth.	• S106 contributions in the appraisals have been advised by HBC and include allowances for transport.	Direct

Policy	Relevant Extracts / Summary	Notes	Impact
Strategic Policy 11 (SP11): Healthy and Safe Communities	• All development should be designed to promote health and wellbeing. To achieve this outcome, the council will require the delivery of healthy homes and communities for people to live, work and thrive to achieve improved education, health, employment and quality of life. • Major development proposals will be required to demonstrate through a Health Impact Assessment (HIA) screening how they will result in an inclusive, healthy and sustainable place that improves health and wellbeing outcomes for everyone. • A HIA screening is required for developments of 40+ dwellings and/or 1,000sqm or more of commercial floorspace, with mitigation measures incorporated where adverse health impacts are identified.	• The costs of the Health Impact Assessment are assumed to be accounted for across the application / survey fees allowance and the increased professional fees.	Indirect
Strategic Policy 12 (SP12): Infrastructure Delivery Strategy	• Development proposals will be required to take into account existing infrastructure and to provide and/ or contribute to the provision, and where appropriate maintenance, of facilities, infrastructure and services where development gives rise to a need for additional or improved infrastructure • The delivery of relevant infrastructure will be secured either through direct provision by the developer or financial contributions, such as s106 and/ or planning obligations. In most cases, infrastructure requiring maintenance and management will require a clear and deliverable plan to be in place for the lifetime of the asset. Contributions towards infrastructure maintenance will also be secured where relevant	• S106 contributions in the appraisals have been advised by HBC	Direct
Strategic Policy 13 (SP13): Development Viability	• In order for development to come forward with sufficient essential infrastructure, it may be necessary to make commensurate, proposal-specific adjustment to affordable housing policy	• Our viability testing has included three scenarios which vary the extent of policy contributions sought and the impact on viability. Notably, Scenario C (Pragmatic	Direct

Policy	Relevant Extracts / Summary	Notes	Impact
	requirements. The following priorities must be worked through where proposal specific viability assessments are necessary: ○ All development proposals will be required to deliver the following obligations: ▪ a. Meeting or exceeding the minimum water efficiency standard as set out in Policy SC3; ▪ b. A drainage strategy, and resulting SuDS; ▪ c. Any necessary flood risk prevention, adaptation and/or mitigation measures, as set out in Policy SC16; ▪ d. Improvements to the Strategic or Local highways network that are critical by reason of capacity and/or safety. • Where the requirements of 1 or 3 or a combination of the two would result in delivery of less than the full affordable housing obligations as set out in SP2, a commensurate cascade5 adjustment to affordable housing will be acceptable subject to the applicant consenting to the use of the viability review mechanism as set out in SP2.	Appraisals) considers the impact of prioritising the requirements of SP13 1a-d before considering the maximum viable amount of affordable housing which can be sought.	
Chapter 5 - Development Potential Areas and Regeneration Areas	• This section introduces one Development Potential Area and three regeneration areas.	• The typologies have considered the sites included in Chapter 5	Direct
Chapter 6 - Site Allocation Policies	• This section sets out the housing and employment allocations within the Local Plan.	• The residential and non-residential typologies have considered the sites included in Chapter 6	Direct

Policy	Relevant Extracts / Summary	Notes	Impact
Policy H1: Specialist Housing for Older People	• Development proposals should have regard to meeting the housing needs of older people. The housing needs of older people can range from accessible and adaptable general needs housing to specialist housing with high levels of care and support. Regard should be had to good practice design principles and proposals should show how these have been adhered to. • New care homes and specialist accommodation should be accessible by sustainable and active travel and provide appropriate amenity space for residents. • Where proposals contain Class C3 accommodation affordable housing should be provided in accordance with the affordable housing Policy, Policy SP2: New and Affordable Housing.	• We have not been made aware of any specific sites within the plan that are expected to deliver housing for older people. Separate hypothetical typologies have been developed based on our experience and the typical expectations of this type of developer. • The appraisals have investigated the potential for this type of accommodation to provide affordable housing in line with Policy SP2.	Direct
Policy H2: Shared Housing	• This policy sets the requirement for applications involving the conversion of existing buildings to non-self-contained accommodation. • Applications must provide an acceptable standard of accommodation, adequate communal facilities, cycle/storage and waste provision, and must not harm neighbouring amenity. • Appropriate management and supervision arrangements will be required for HMOs where necessary.	• We have not tested this type of accommodation	None
Policy H3: Conversion of Existing Dwellings	• To support the provision of quality homes and dwelling mix, planning permission will be granted for the conversion of all or part of a dwelling into multiple self-contained dwellings, provided that… • a high standard of accommodation is provided that complies with requirements set out in Policy SC2: Design - Housing Mix, Accessibility and Adaptability;	• Some of the sites included as part of the plan making process are expected to involve conversion of existing buildings. Our typologies have distinguished where this is proposed and make appropriate adjustments to the inputs.	Indirect

Policy	Relevant Extracts / Summary	Notes	Impact
Policy H4: Self build and Custom housebuilding	• Proposals for self and custom housebuilding will be supported in appropriate locations where there is demonstrable demand for plots and all other relevant planning policies are satisfied.	• We have not appraised any self-build schemes explicitly. All our residential typologies are based on the premise that land can be acquired and developed into a new unit (including appropriate allowance for profit). • Where self-building involves plot sales and/or part-completed units (e.g. foundations, or 'wind and watertight'), the working assumption is that the developers' profit is commensurate with the development work undertaken and therefore there is sufficient development surplus to incentivise the self-builder to complete the unit.	None
Policy H5: Accommodation for Traveller Communities	• This policy sets out the circumstances where proposals for gypsy and traveller accommodation will be supported.	• We have not appraised this type of development, nor been made aware of any sites expected to deliver this type of development.	None
Policy H6: Housing Renewal	• Proposals for housing renewal will normally be supported where they result in improvements to the housing mix, quality of design, deliver other public benefits and align with other policies of this plan, including those on retrofit.	• We have not appraised this type of development, nor been made aware of any sites expected to deliver this type of development.	None
Policy H7: Temporary Residential Uses	• This policy sets out the circumstances where proposals for Temporary Residential Uses will be supported	• No implication on plan viability	None
Policy E1: Protecting and Enhancing Employment sites,	• This policy sets out the circumstances where proposals within Strategic or Local Employment Areas will be supported	• Our employment and non-residential typologies are based on the uses set out in Policy E1.	Indirect

Policy	Relevant Extracts / Summary	Notes	Impact
areas and allocations.		• The allocation of employment land has an indirect impact on the wider land market. As land is a finite resource, land that is allocated for employment cannot be used for residential and vice versa – this may have supply / demand implications, putting upward pressure on land values in the area which in turn will affect the benchmark land values used for plan viability testing purposes. This will manifest indirectly through the price mechanism for land and property values – including residential development land.	
Policy E2: Skills, Employment and Supply Chain	• Proposals incorporating 1,000sqm or more gross new commercial floorspace and/ or 40 dwellings or bed spaces should include: a. Local labour and procurement agreements setting out how local employment and goods will be secured where possible; b. A local skills development plan; c. A project completion statement for a and b above.	• It is assumed that any costs associated with agreements and skills plans are covered through the planning fees and increased professional fees allowances. • BCIS costs are rebased to Hastings to reflect local labour costs.	Indirect
Policy E3: Primary Shopping Areas	• Primary Shopping Areas are defined for all town centres, as set out on the Policies Map. Within the Primary Shopping Areas, the council will support proposals for retail and main town centre uses and commercial, business and services falling within Planning Use Class E, where proposals… (continues to set out conditions)	• The policy does not impose any specific requirements/contributions from development. However, it may influence the type, location, and form of retail schemes that come forward. • We have tested a range of non-residential uses including Class E to understand the impact of other policy requirements on viability and also the ability to introduce CIL for these uses.	Indirect

Policy	Relevant Extracts / Summary	Notes	Impact
Policy E4: Food, Drink, Entertainment and the Night-time Economy	• Development proposals for new Cafes, Restaurants, Drinking Establishments and Hot-Food Take Aways will be supported in Town, District and Local Centres where… (continues to set out conditions)	• No implication on plan viability	None
Policy E5: The Visitor Economy	• This policy sets out the conditions for new or extended visitor accommodation, as well as those for proposals involving the loss of existing visitor accommodation. • The loss of existing visitor accommodation will only be supported where there is no reasonable prospect of its retention, shown through evidence and marketing.	• No implication on plan viability	None
Policy E6: Outdoor Visitor Accommodation	• Policy concerning the provision of new, expansion of or improvement to existing lawful caravan, chalet and camping sites and other forms of outdoor visitor accommodation.	• No implication on plan viability	None
Policy SC1: Key Design Principles	• Development should make a positive contribution to the quality, character, local distinctiveness and sense of place in Hastings. • Ensures that biodiversity, climate adaptation and mitigation measures have been incorporated into the design, including through the delivery of multifunctional green and blue infrastructure within the public realm and transport corridors.	• Both the residential and non-residential appraisals include the costs required to meet Net Zero Carbon standards, as advised by Introba & Currie & Brown. • Costs for 10% biodiversity net gain have also been fixed in all appraisals.	Direct
Policy SC2: Housing mix, Accessibility and Adaptability	• The council will require new residential development to make provision for a mix of housing types and tenures to support a range of household sizes, ages and incomes to meet both current and projected housing needs • Proposals for new residential development will be required to… meet the Nationally Described Space Standards.	• The residential typologies consider the market housing unit mix advised in the latest HEDNA (August 2026). • The preferred affordable housing mix has been advised by the Council. We understand the policy allows for	Direct

Policy	Relevant Extracts / Summary	Notes	Impact
	• Proposals for residential development will be required to…Ensure all new homes meet M4(2) Accessible and Adaptable standards and where there is an identified need on the council Housing Register, sites that provide affordable housing in line with Strategic Policy SP2 will, as part of the affordable housing requirement, need to provide 10% of the total housing requirement to meet M4(3): Category 3 - Wheelchair Accessible Dwellings.	appropriate flexibility with the affordable unit mix. • All units meet the nationally described space standards. • The appraisals include costs for the accessibility requirements set out in SC2. We understand the M4(2) requirements is to be relaxed from a mandatory requirement to an advisory / preferential one.	
Policy SC3: Sustainable Design and Construction	• Proposals for major development must be supported by an Energy Strategy Report. • Minor and major proposals for residential development must be capable of achieving a maximum water use of 100litres per person per day as built. • The Council operates a presumption in favour of retrofit and re-use of existing buildings over demolition, unless demolition can be robustly justified.	• The cost for an Energy Strategy Report is assumed to be embedded across the planning and / or professional fees allowances. • The standards set out for energy use, heating, embodied carbon and renewables are expected to be captured in the Net Zero advice from Introba and Currie & Brown. • All appraisals include fixed costs to reflect the water efficiency requirement.	Direct
Policy SC4: Alteration and Extension of Dwellings	• No implication on plan viability	• No implication on plan viability	None
Policy SC5: Proposals Affecting the Significance and Setting of Heritage Assets	• This policy sets out the conditions for proposals that would affect the significance or setting of designated or non-designated heritage assets.	• Heritage assets (e.g. conservation areas) tend to have bespoke/higher values which offset some of the design enhancements. • Conservation and restoration projects would be subject to site-specific	Indirect

Policy	Relevant Extracts / Summary	Notes	Impact
		appraisal e.g. for Optimal Viable Use (under the NPPF). This is referenced in the Policy. • Site-specific assessment will determine the extent of policy contributions that can be made and balance this against the interests of preserving or restoring heritage assets – see NPPF Para 212.	
Policy SC6: Sustainable Development and Heritage Protection	• The council will support development that achieves a sensitive balance between reducing carbon emissions locally and the statutory requirement to give special weight to preserving significance and securing the long-term survival of our heritage assets.	• As above, site-specific assessment will determine the extent of policy contributions that can be made and balance this against the interests of preserving or restoring heritage assets – see NPPF Para 212.	Indirect
Policy SC7: Changes to building elevations and roofs in Conservation Areas	• In conservation areas, the council will seek to maintain the form and appearance of original features including windows, doors, roofs, and other significant architectural elements where these contribute to the character of the building and the significance of the wider conservation area. • Historic architectural features should be retained and repaired. Where this is not possible, and where appropriate, they should be reinstated to match existing features.	• Site-specific assessment will capture the costs and values involved with development in conservation areas.	None
Policy SC8: Shopfronts, Advertisements and Commercial Frontages	• No implication on plan viability	• No implication on plan viability	None
Policy SC9: The High Weald	• Where development could impact the High Weald National Landscape or other areas of landscape value, a Landscape	• The cost for a Landscape Assessment is assumed to be embedded across the	Indirect

Policy	Relevant Extracts / Summary	Notes	Impact
National Landscape and Other Areas of Landscape Value	Assessment will be required and development must conserve and enhance landscape character and natural beauty.	planning and / or professional fees allowances. • Any broader impact of Policy SC9 on development can be reflected at the site-specific stage and through the inclusion of abnormal costs.	
Policy SC10: Habitat Protection, Biodiversity and Net Gain	• Development proposals (other than where loss or degradation of habitat would be negligible such as a change of use or building alteration) will be required to demonstrate biodiversity net gain and will be accompanied by appropriate ecological appraisals showing the potential impact of the proposed development on habitats and species.	• Our appraisals include the costs for meeting 10% biodiversity net gain in line with the Environment Act on both residential and non-residential sites. • S106 contributions include allowances advised by the Council for BNG monitoring.	Direct
Policy SC11: Trees, and Woodland and Hedgerows	• No implication on plan viability	• No implication on plan viability • Where there are particularly mature trees (TPOs) and hedgerows to be protected, this is known to the developer as part of their site due diligence and the costs of mitigation are factored into the price paid for the land. I.e., one cannot pay the same price for land which is cleared as a developer platform, compared to land which is constrained by mature trees and hedgerows.	Indirect
Policy SC12: Green and Blue Infrastructure	• Development within the core GBI network must retain, restore, protect, and enhance existing GBI on-site to support climate change adaptation and mitigation, and deliver benefits to wildlife, habitats, ecosystem services and the health and wellbeing of the local community. Schemes should form part of a wider connected, innovative multifunctional green and blue infrastructure network	• Matters such as blue/green infrastructure are accounted for through standard allowances in external works and site coverage assumptions. • Costs of 10% biodiversity net gain are included within the appraisals.	Indirect

Policy	Relevant Extracts / Summary	Notes	Impact
	which includes, sustainable drainage as well as urban cooling. Any new or enhanced GBI must be multifunctional in nature, and Schemes should be designed in accordance with recognised standards such as the Building with Nature Standards.		
Policy SC13: Urban Greening Factor	• All major development proposals must, and any minor development proposals within the key connecting corridors and their 500m buffer should, demonstrate that: a. The proposal will meet or exceed an Urban Greening Factor of 0.4 (for residential) or 0.3 (for commercial development*) and; b. There should be no net loss against the baseline undeveloped site score. • Minor development proposals outside of the key connecting corridors and their 500m buffer should seek to incorporate elements of high scoring urban greening appropriate to the site. • Onsite Urban Greening should be maintained for the lifetime of the UGF measures. Major development proposals must demonstrate this through an agreed maintenance and management plan. This may be secured by condition.	• Higher density brownfield appraisals have included costs for UGF which are designed to cover the provision of Green Roofs which meet the necessary factor in Policy SC13. • It is assumed UGF is not required on greenfield sites or lower density housing proposals on brownfield sites, as the external works and gardens may be sufficient to meet the UGF. • All brownfield non-residential appraisals include costs for UGF.	Direct
Policy SC14: Provision, Enhancement and Retention of Sports and Recreation Facilities	• Sports and recreation facilities are identified in the most up-to-date Open Space and Play Strategic Assessment and the Playing Pitch and Built Facilities Strategy. • Development which seeks to maintain or enhance existing sports and recreation spaces will be supported. • Development resulting in the loss of sports, recreation, play facilities or playing fields will only be permitted where suitable replacement or enhanced provision is secured, or where the benefits clearly outweigh the loss.	• The s106 allowances advised by the Council include contributions for sports pitches and open space.	Direct

Policy	Relevant Extracts / Summary	Notes	Impact
Policy SC15: Ground Behaviour, Geodiversity and Land Stability	• Development proposals for major and minor applications will be supported in areas with the potential for poor ground conditions or slope instability, and within Landslide Activity Risk Areas where the proposal demonstrates that… (continues to state conditions).	• Ground instability and the necessary remediation would constitute abnormal costs and therefore be reflected in the BLV assessment. Such matters should be considered at the site-specific stage. • The costs for any assessments and management plans would be picked up in the planning and / or professional fees allowances.	Indirect
Policy SC16: Flood Risk and Drainage	• A Flood Risk Assessment will be required as part of a planning application for any development in flood risk zones 2 and 3. Sequential and Exception Tests may also be applied where required by national policy. • Proposals must incorporate Sustainable Drainage Systems (SuDS) and manage surface water run off to ensure there is no increase to runoff rates and flood risk is not increased elsewhere.	• Costs of SuDS are accounted for within the external works allowance. • The FRA should identify which development sites are at the highest risk and may therefore bear a higher cost. • We have assumed that most of the sites that are allocated do not flood, and that flooding of allocated sites is the exception. • Also, where sites have particular flood risk issues, the cost of mitigation (including fees) should be discounted from the value of the land. Site-specific viability can address any abnormal or exceptional costs at the planning application stage.	Direct
Policy SC17: Coastal Change Management	• This policy seeks to prevent development in the Glyne Gap Coastal Change Management Area, unless certain evidence and criteria can be met.	• No implication on plan viability. Any abnormal costs associated with proposals in this location should be considered at the decision taking stage.	None

Policy	Relevant Extracts / Summary	Notes	Impact
Policy SC18: Pollution and Hazards	• Development will minimise and mitigate pollution and hazards and seek to improve air and water quality during both the construction and operation phases of development. • To protect and enhance air quality, an Air Quality Impact Assessment (AQiIA) must be provided alongside proposals • Development proposals should undertake site investigation for contaminants • To protect water quality, development proposals must…. Incorporate SuDS • All major and minor development proposals must provide a construction management plan • All major and minor development must provide a maintenance and management plan in relation to any pollution mitigation measures for the lifetime of the system.	• This policy requires applicants to provide evidence and specialist assessments to justify the pollution impacts of development. This is expected to be captured through the combination of the planning application fees and professional fees allowances in the appraisals. • This should identify which development sites are at the highest risk and may therefore bear a higher cost. Where sites have particular air quality issues, the cost of mitigation (including fees) should be discounted from the value of the land • Impact assessments and management plans will be covered through a combination of the planning fees and / or professional fees. • Our appraisals assume the costs for SuDS are included within the external works allowances.	Direct
Policy SC19: Environmental Nuisance	• This policy aims to protect human health, wildlife, and local amenity by ensuring that new developments minimise and mitigate environmental nuisances during both construction and operational phases.	• As per Policy SC18 above.	Direct
Policy SC20: Community Facilities	• To safeguard opportunities for sufficient early years provision, day nurseries permitted in line with this Policy will be secured through a planning condition. This will have the effect of removing changes to other uses within the same planning use class without a planning consent.	• S106 contributions are included in the appraisal for a range of different uses. • Contributions will not be required for all sites, and any specific requirements will be considered at the decision taking stage.	Direct

Policy	Relevant Extracts / Summary	Notes	Impact
	• Proposals for the provision, enhancement and extension of community facilities will be supported where they are appropriately located and accessible. • The loss of community facilities will only be permitted where they are no longer needed/replaced or (for commercial facilities) can be demonstrated as no longer viable. • Proposals involving the loss of a shop or service outside the defined commercial areas will not usually be supported.		
Policy ID1: Planning Obligations (Section 106)	• The council will seek to ensure that the right infrastructure is in place at the right time support new development through using planning obligations including Section 106 agreements. • Where the full affordable housing contribution cannot be delivered, the Council will require a viability review. • Affordable housing contributions from small sites of 9 dwellings or fewer will be delivered through a commuted sum rather than on-site provision.	• The Council have provided costs for various contributions including transport, open space / play, playing pitches, built facilities, police and rail. • Our assessment considers the maximum viable level of affordable housing which can be delivered whilst balancing other policy requirements and CIL.	Direct
Policy ID2: Access, Services and Parking	• Access, Services and Parking seeks to ensure that access, parking, and servicing infrastructure are efficiently integrated into new developments without compromising safety, aesthetics, or active travel. • Development should prioritise walking and cyclin, minimise land used for parking and avoid car development dominating the design of development. • Residential development should generally provide no more than one parking space per dwelling, with further restrictions applying in the Low Car Parking Area near Hastings Stations.	• This policy may have an indirect impact on viability where site-specific parking requirements result in land take, design amendments, or abnormal costs (e.g. undercroft or multi-storey provision in constrained sites). • It is assumed that standard parking provision is accounted for within the development typologies through density assumptions + any cost considered to be covered through external works allowance.	Indirect

Policy	Relevant Extracts / Summary	Notes	Impact
		• Any exceptional parking-related costs would be considered on a site-specific basis at the planning application stage.	
Policy ID3: Open space, Sports and Recreation	• Open space, Sports and Recreation seeks to ensure that new developments compensate for the additional pressure they place on local infrastructure by enhancing community recreational assets and securing developer funding through legal agreements. • Development will be required to contribute towards the capacity, quality, usability and accessibility of existing open space, sports and recreation facilities where development increases demand.	• S106 contributions include costs for open space, play and playing pitches.	Direct
Policy ID4: Utilities Infrastructure and New Connections	• This policy seeks to ensure that utilities infrastructure is sufficient, protected, sustainable, and properly integrated to support both new developments and existing communities.	• Utilities connections expected to be picked up through external works allowances. • Where reinforcement or upgrades are required that require contributions, it is expected that this will be deducted from the land value as an abnormal cost.	Indirect

Aspinall Verdi

1 Introduction

1.1 AspinallVerdi have been reappointed by Hastings Borough Council to update the Local Plan Viability Study (LPVS) in support of the emerging Local Plan. The study was originally commissioned in 2020 and has been through various iterations as emerging policy requirements have been refined and consultations have been completed, resulting in a draft version of the assessment being submitted in Summer 2024. Owing to the time which has passed, and in support of the latest version of the emerging Local Plan, we have prepared an updated land market report, which will inform the Benchmark Land Value (BLV) assumptions adopted within our updated viability testing. This paper will sit as an Appendix to the main Viability Report.

1.2 As part of an area-wide viability study, we make high-level assumptions in respect of the land value in order to appraise a representative sample of hypothetical development typologies. The BLV does not represent the values at which land will, or has to, transact across Hastings – it is simply the benchmark for plan viability purposes. This is consistent with the Royal Institute of Chartered Surveyors (RICS) Professional Standard[1], which states the following:

> *'The BLV is not a price to be paid in the marketplace; it is a mechanism by which the viability of the site to provide developers' contributions can be assessed.'*

1.3 The subsequent sections of this report are separated as follows:

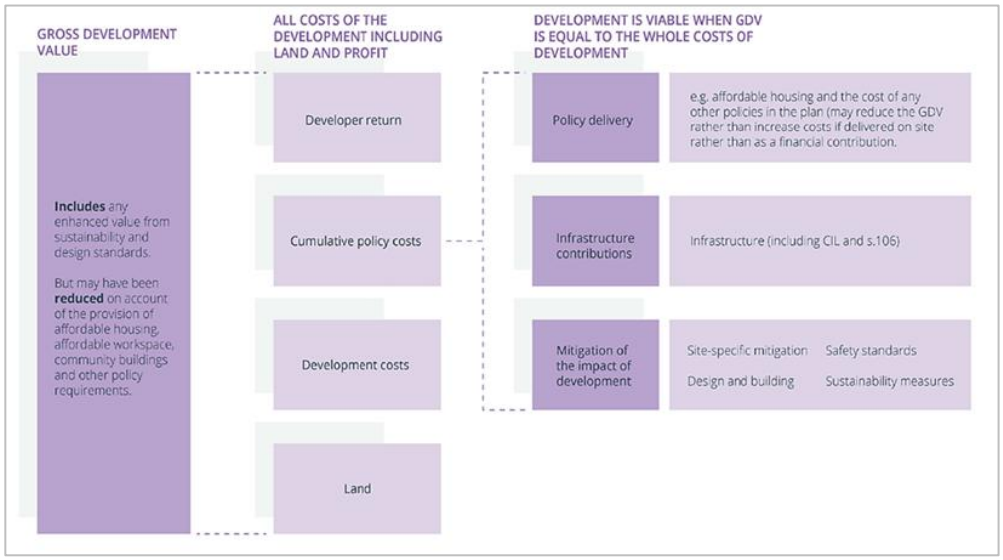
Section 2 – Land Value Approach	This section summarises our approach to the BLV. It should be read in conjunction with the more detailed discussion and analysis in the main Viability Report.
Section 3 - UK Land Context	This section provides an overarching context to land values at a national and regional level, calling on published research and market reports for greenfield and brownfield land.
Section 4 - Greenfield Land Values	This section sets out the market information for greenfield land values across the Borough.
Section 5 - Brownfield Land Values	This section sets out brownfield land value evidence.
Section 6 - Benchmark Land Value Assumptions	Within this section, we set out our BLV assumptions derived from the above research and interrogation of our confidential land value database.

[1] RICS, 2021. Assessing viability in planning under the National Planning Policy Framework 2019 for England, Paragraph 5.1.3.

2 Land Value Approach

2.1 In a development context, the land value is calculated using a residual approach – the Residual Land Value (RLV). The RLV is calculated by deducting the development costs (including the developer's return, policy costs and land value) from the gross development value of the development. This is illustrated in Figure 2.1.

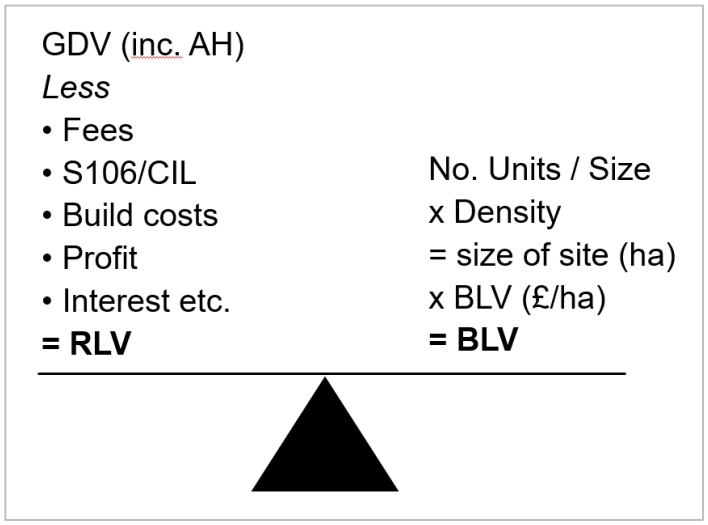
Figure 2.1 – Viability Assessment Components



Source: RICS, April 2023.

2.2 As above, a development is deemed viable if the cumulative policy costs have sufficient headroom. If the GDV equals the costs of development on a policy-compliant basis, then the development is viable, as the necessary element of policy compliance has been included. Hence, for plans and schemes to be viable, the RLV has to be tested against the 'benchmark', which would enable sites to come forward – known as the Benchmark Land Value (BLV). This is illustrated in Figure 2.2.

Figure 2.2 - Balance between RLV and BLV



Source: AspinallVerdi (© Copyright)

2.3 The fundamental question is, 'What is the appropriate BLV?' for viability testing. The NPPF (December 2024) simply states that 'all viability assessments, including any undertaken at the plan-making stage, should reflect the recommended approach in national planning guidance, including standardised inputs, and should be made publicly available'. [2] The Planning Practice Guidance on Viability provides information on land values for the purpose of assessing viability in planning, as set out below:

- Paragraph: 014 - How should land value be defined for the purpose of viability assessment? – 'a benchmark land value should be established on the basis of the existing use value (EUV) of the land, plus a premium for the landowner'.
- Paragraph: 015 – 'In plan making, the landowner premium should be tested and balanced against emerging policies.'
- Paragraph: 016 – What is meant by existing use value in viability? 'EUV is the value of the land in its existing use. Existing use value is not the price paid and should disregard hope value. Existing use values will vary depending on the type of site and development types. EUV can be established in collaboration between plan makers, developers and landowners by assessing the value of the specific site or type of site using published sources of information, such as agricultural or industrial land values, or if appropriate capitalised rental levels at an appropriate yield (excluding any hope value for development)'.
- Paragraph: 017 – 'The premium should provide a reasonable incentive for a land owner to bring forward land for development while allowing a sufficient contribution to comply with policy requirements'.

2.4 The guidance is clear that the land value assessment needs to be based on the Existing Use plus Premium approach (EUV+). The Royal Institute of Chartered Surveyors also supports the EUV+ method when determining land values for planning purposes, stating the following:

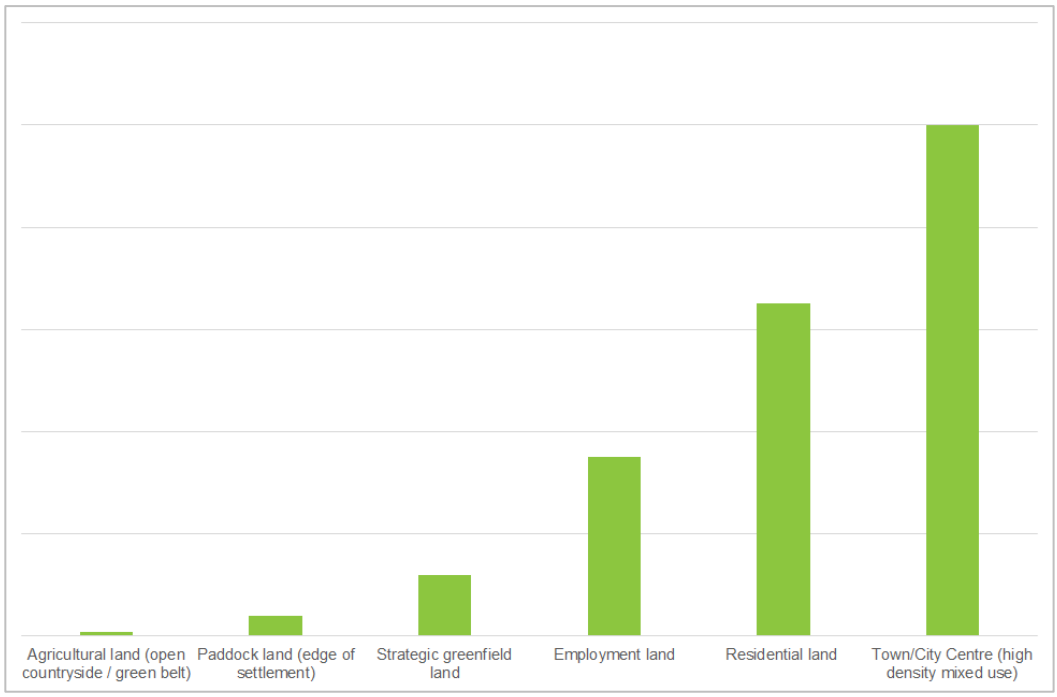
> 'The PPG is unambiguous that EUV+ is the primary approach.'[3]

2.5 Land transaction evidence should only be used as a cross-check to the EUV plus premium. The RICS guidance emphasises the PPG paragraph 016, which states that 'any data used should reasonably identify any adjustments necessary to reflect the cost of policy compliance (including for affordable housing), or differences in the quality of land, site scale, market performance of different building use types and reasonable expectations of local landowners'.[4]

2.6 The land market is not perfect, but there is a generally accepted hierarchy of values based on the supply and demand for different uses. This is illustrated on an indicative basis in Figure 2.3.

[2] Paragraph 59, National Planning Policy Framework
[3] RICS, March 2021 (effective from 01 July 2021), Assessing viability in planning under the National Planning Policy Framework 2019 for England, paragraph 5.7.7
[4] Ibid, paragraph 5.7.6

Figure 2.3 - Indicative Land Value Hierarchy



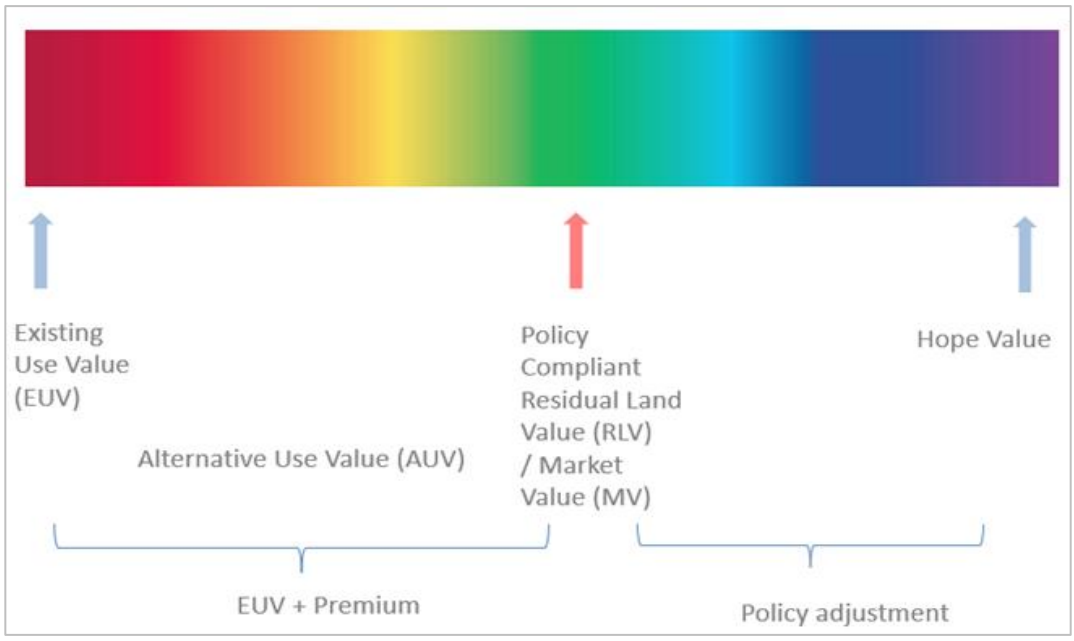
Source: AspinallVerdi (© Copyright)

2.7 Note that the value of individual sites depends on the specific location and characteristics. For development to take place (particularly in the brownfield land context), the value of the alternative land use has to be significantly above the existing use value to cover the site acquisition, the full cost of redevelopment (including demolition and construction costs) and developer's profit / return for risk. In an area-wide context, we can only be broad-brush in terms of the BLV as the approach requires that a representative sample of hypothetical development typologies be appraised – see Paragraph 004 of the Viability PPG.

2.8 The assessment of the existing use is made more easily in the context of greenfield agricultural land, where the values are well established; however, there is less certainty in urban areas, where there is competition for land among a range of alternative uses. It begs the question EUV "for what use?". It is impossible to appraise every potential permutation of the existing use (having regard to any associated legacy) and development potential, and hence a more inclusive and practical approach needs to be taken.

2.9 When considering transactional evidence, it is important to acknowledge the influence that 'hope value' has on land prices. Hope value is the element of value in excess of the existing use value, reflecting the prospect of some more valuable future use or development. The PPG specifically states that hope value (and the price paid for land) should be disregarded from the EUV. However, hope value is a fundamental part of the market mechanism and therefore is relevant in the context of the premium. Figure 2.4 illustrates these concepts.

Figure 2.4 - Benchmark Land Value Approaches



Source: AspinallVerdi © (Copyright)

2.10 It is acknowledged that there has to be a premium over EUV to incentivise the landowner to sell. Although the assessment of the Existing Use Value can be informed by comparable evidence, the uncertainty lies in how the premium or 'plus' element is determined. In this context, the Harman report 'allows realistic scope to provide for policy requirements and is capable of adjusting to local circumstances by altering the percentage-based premium used in the model. The precise figure that should be used as an appropriate premium above the current use value should be determined locally. But there must be [Market Value] evidence that it represents a sufficient premium to persuade landowners to sell'. [5]

2.11 The HCA Area Wide Viability Model (Annex 1 Transparent Viability Assumptions) is the only source of specific guidance on the size of the premium. The guidance states:

> 'There is some practitioner convention on the required premium above EUV, but this is some way short of consensus and the views of Planning Inspectors at Examination of Core Strategy have varied. Benchmarks and evidence from planning appeals tend to be in a range of 10% to 30% above EUV in urban areas. For greenfield land, benchmarks tend to be in a range of 10 to 20 times agricultural value.'[6]

2.12 Greater emphasis is now being placed on the existing use value (EUV) + premium approach to break the circularity of ever-increasing land values. As a result of these increases (partly driven by developers negotiating a reduction in policy obligations on grounds of 'viability'), we are finding that the range between existing use value (EUV) and 'Market Values' (including aspirational asking prices) is getting larger. Therefore (say) 20 x EUV and (say) 25% reduction from 'Market Value' may not 'meet in the

[5] Viability Testing Local Plans Advice for planning practitioners - Local Housing Delivery Group - Chaired by Sir John Harman (June 2012), page 29.
[6] HCA Area Wide Viability Model (Annex 1 Transparent Viability Assumptions), August 2010, Transparent Assumptions v3.2 06/08/10

middle', meaning it is instead a matter of professional judgement what the BLV should be, based on the evidence.

2.13 In order to provide a comprehensive analysis, we have undertaken a variety of sensitivity analyses within our viability appraisals, including changes to the BLV. These are shown for each of the typologies, with an explanation of how to interpret the sensitivities in the Main Viability Assessment report.

3 UK Land Market Context

3.1 This section provides background context to land values at a national and regional level.

Overview

3.2 In their most recent research into the Residential Development Land Market, Savills report that there has been a mixed start to 2026, characterised by regional divergence between the north and south of the country. Land sales remain subdued across the majority of the South East and East of England, resulting in a more cautious sentiment from housebuilders, whilst a more robust housing market in the North has demonstrated continued activity and competition. This divergence is evident when looking at the change in greenfield land values, with those in the south-east falling by -2.1% compared with positive growth in the North. Overall, greenfield values fell by an average of 0.9% across the UK during Q1 2026.[7]

3.3 Headwinds continue to face the market for brownfield / previously developed sites, with a declining appetite for flatted developments owing to ongoing viability challenges caused by increased build costs and building safety regulations. This is with the exception of values in both Outer and Central London, which remained steady. Across the country, brownfield land values declined by -1.4% during the first quarter, bringing the total annual change to -5.8%. The quarterly decrease was higher in the South East at -2.6%.[8]

Figure 3.1 – UK Greenfield and Urban Residential Land Value Index

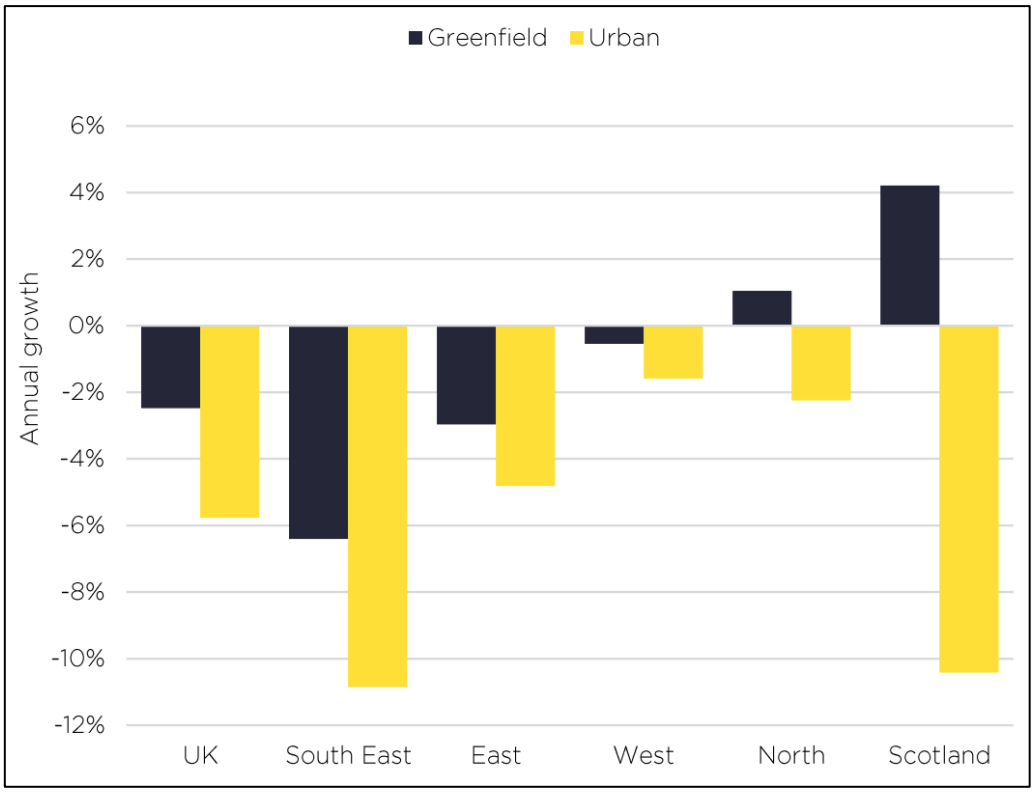
[8] Ibid

Figure 3.2 – Annual Change in Land Values by Region



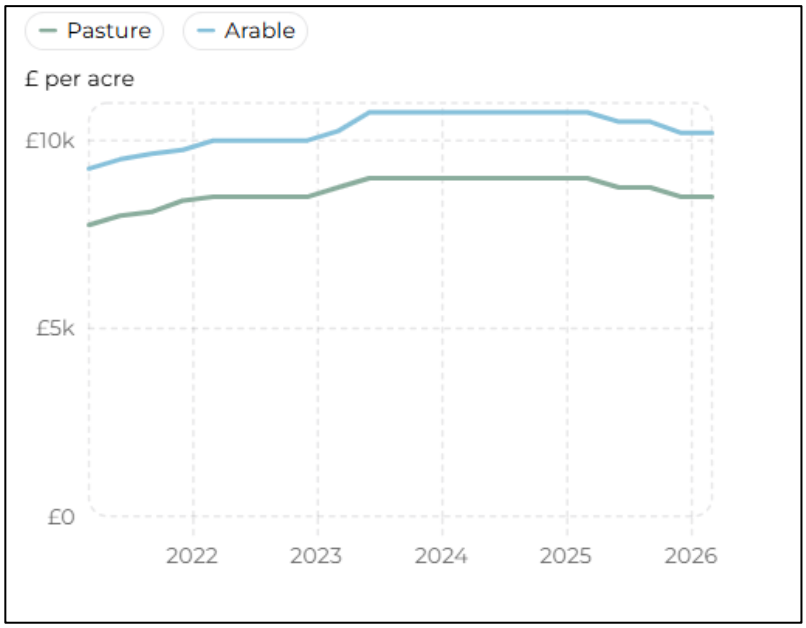
Source: Savills, 2026.

3.4 Figure 3.1 and Figure 3.2 demonstrate the fall in both greenfield and brownfield land values over the past year, with sites in the South East demonstrating the most significant changes.

Greenfield & Agricultural Land

3.5 Figure 3.3 displays average agricultural land values in the South East between 2022 and the start of 2026. At regional level, agricultural land values have remained relatively stable in recent years, with Carter Jonas reporting that there has been a marginal decrease over the past 12-months of 2.2% for average pasture land and 3.2% for arable land. The more recent increase in the rate of annual decline is expected to be related to the war in Iran and the impact of energy and fertiliser prices on UK farming. The reliance on imports leaves the UK vulnerable to disruption and, in turn, decreases the prospects of improvements in interest rates and inflation.

Figure 3.3 – South East Average Agricultural Land Values (£/acre)



Source: Carter Jonas, 2026.

3.6 Table 3.1 displays South East agricultural land values by type, as of Q1 2026.

Table 3.1 – South East Agricultural Land Values (by type)

Land Type	Low £ / ac	Low £ / ha	Prime £ / ac	Prime £ / ha	Avg. £ / ac	Avg. £ / ha
Arable	£9,000	£22,239	£12,250	£30,270	£10,200	£25,205
Pasture	£7,750	£19,151	£9,250	£22,857	£8,500	£21,004

Source: Carter Jonas, 2026.

3.7 Figure 3.3 and Table 3.1 show that arable land is typically valued higher than pasture land. There is also a larger difference in the value of low and prime arable land, when compared to pasture land. Similar observations are made by Strutt & Parker in their Spring 2026 English Estates & Farmland Market Review, where average arable land values remain close to record levels at £11,200 per acre, and pasture at £8,800 per acre. Knight Frank report a marginally lower average of £8,622 per acre in their Farmland Index for Q1 2026.

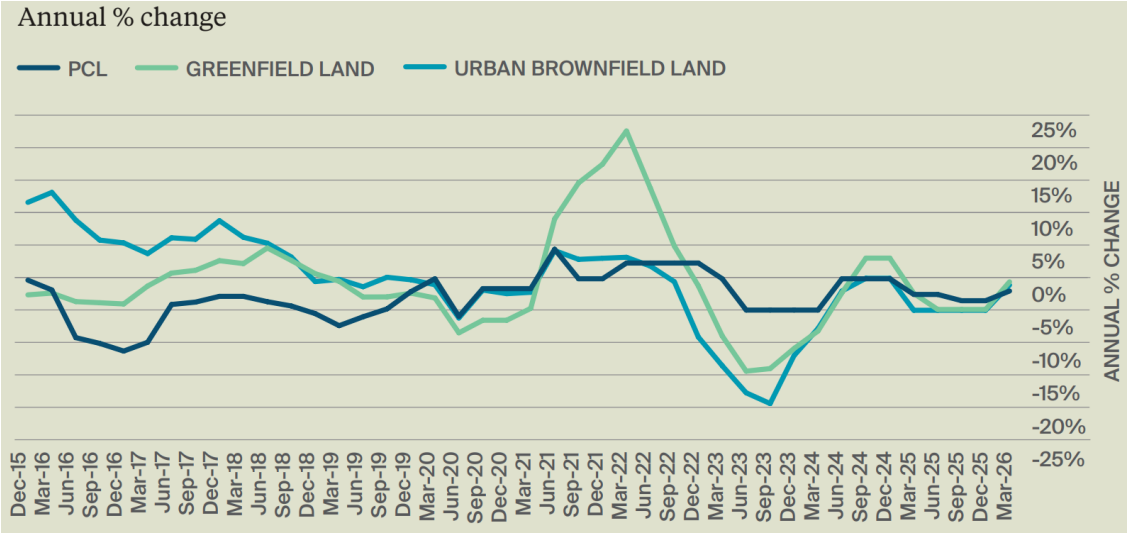
3.8 In terms of supply, both Carter Jonas and Strutt & Parker report declines over the year of between c. 35 – 45%. Both commentators attribute this to persistent wet weather over January and February which in turn delayed launches to the market. Carter Jonas note a slight uptick in the supply towards the end of Q1 2026, with expectations that the market will remain balanced as opposed to oversupplied.

3.9 Farmland can be seen as an attractive, safe investment that could stimulate demand and result in price growth akin to that post-Global Financial Crisis. However, there are still serious challenges concerning the supply of farm workers (as a consequence of global inflationary pressures and the conflicts in Ukraine and the Middle East). Strutt & Parker expect that the market will perform similarly to 2025, with variable pricing which is more consistent in certain regions and localities than others.

Brownfield Land

3.10 In their UK Residential Development Land Index Q1 2026, Knight Frank report that residential land values weakened early in the year as renewed geopolitical uncertainty and persistent viability pressures weighed on demand. This followed a brief period of stability at the turn of the year, with urban brownfield land values subsequently falling by 2.5% in the first quarter, leaving the annual decline at 2.0%. While pricing appears close to a floor, fragile developer confidence, higher borrowing costs and a restrictive planning and regulatory environment continue to present significant headwinds, keeping development activity and start volumes subdued, particularly in urban markets.[9]

Figure 3.4 – Residential Development Land



Source: Knight Frank, 2026.

3.11 Following a brief period of stability at the turn of the year, developer confidence has softened moving into 2026 as forward-looking indicators point to a more cautious outlook. According to the Knight Frank Index, just 8% of survey respondents expect reservation volumes to improve over the course of the year, while 44% anticipate weaker performance. While planning delays remain the most prominent challenge alongside fragile buyer sentiment and the short-term UK economic outlook, broader delivery expectations have also moderated, with nearly half of housebuilders anticipating a decline in construction start volumes over the next quarter.

3.12 This outlook aligns with the Montagu Evans Residential Land Survey[10], which indicates a major shift in developer priorities. While building safety was the primary concern last year, buyer demand and lack of confidence are now cited as the biggest barriers to new development. The survey found that a meaningful increase in developer appetite is now more likely to be driven by mortgage rate cuts and First-Time Buyer support rather than a fall in land values.

3.13 Regarding regulatory hurdles, the Building Safety Act remains a critical factor, though operational efficiency is improving. In early 2026, the Building Safety Regulator

[9] Knight Frank, 2025. Res Dev Land Index Q4 2025.
[10] Montagu Evans, 2026. The Residential Land Survey (2026).

successfully reduced Gateway 2 approval times for higher risk buildings from the 2024 peak of 48 weeks down to an average of 13–14 weeks. Despite this progress, the Montagu Evans survey highlights a continued shift in product mix, with 72% of respondents now preferring medium-rise developments (below 18m) to avoid the heightened costs and regulatory scrutiny associated with taller towers.

3.14 High land values for immediately deliverable sites remain a core challenge, although the majority of respondents noted that land prices are decreasing. With this, Montagu Evans observe a shift in how land is being secured with option agreements, overtaking subject to planning as the preferred method for accessing land, as developers seek to mitigate risk. While there is a strong appetite for 'oven-ready' deliverable sites with planning certainty, unconsented land without clear potential is attracting fewer bids.

3.15 The Bidwells Summer 2026 Market Update[11] takes a slightly more positive approach, suggesting the market is stabilising but also becoming increasingly polarised. This is tempered by persistent inflationary pressures, elevated mortgage rates and a cautious Bank of England. While prime sites in strong economic centres continue to command stable pricing and competitive bidding, secondary locations are facing downward value adjustments and declining interest. To mitigate risks and protect cash flow, housebuilders are prioritising 'oven-ready' sites with reserved planning approvals, smaller plots and deferred payment structures. This challenging environment has created a sharp divergence between large PLC housebuilders and under-pressure SMEs, driving an increase in parcel sales between developers to sustain outlet volumes in a market showing resilience but lacking momentum.

[11] Bidwells, June 2026. Summer 2026 Market Update: Land Market Remains Selective.

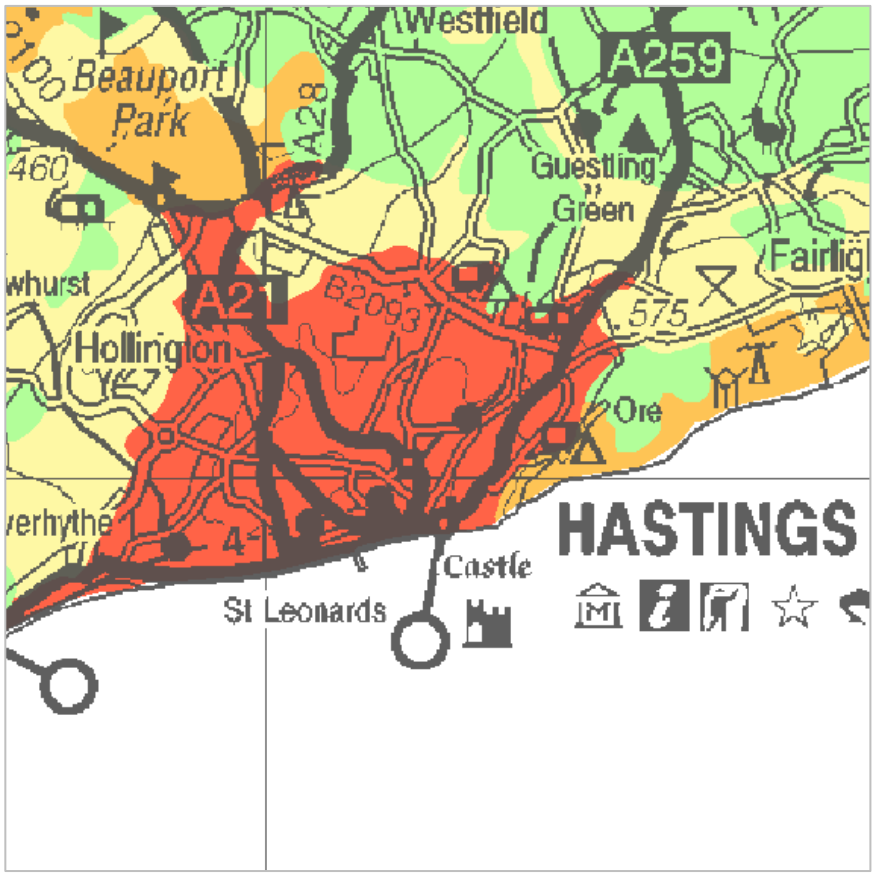
4 Greenfield Land Values

4.1 To inform our existing use values for greenfield sites, we have reviewed asking prices from listings advertised on Rightmove, CoStar, UK Land & Farms and local agent websites. We have also considered the most recent publication of the Agricultural Land Directory undertaken by the Royal Institute of Chartered Surveyors and Royal Agricultural University (RAU), which collates data from a number of greenfield land transactions across the country.

4.2 Figure 4.1 displays the Agricultural Land Classification Map for Hastings Borough and the surrounding areas, as produced by Natural England. The map displays the location of agricultural land within the Borough and assigns a land quality grade to each parcel, as below:

- **Excellent to Very Good Quality** – as indicated by the colour blue;
- **Good to Moderate Quality** – as indicated by the colour green;
- **Very Poor to Poor Quality** – as indicated by the colours yellow and brown; and,
- **Non-Agricultural** – as indicated using the colours orange and red.

Figure 4.1 - Agricultural Land Classification Map for Hastings



Source: Natural England, South East Region, 2011[12].

[12] We would note that the most up-to-date version of this map was published in 2011 therefore some land uses may have changed since the date of publishing.

4.3 As shown in Figure 4.1, the majority of land across Hastings Borough is considered non-agricultural, with some areas of poor / very poor grade land inclined towards the northern and western borough boundaries. We have considered this in our assessment of land values and BLV.

Market Evidence

4.4 This section sets out the evidence identified in our review of greenfield land values. Unlike the residential sales market, evidence from completed land transactions is not publicly available. In the absence of this, we have instead sought information from market reports and current listings for greenfield and agricultural sites.

4.5 The RICS, in conjunction with the Royal Agricultural University, publish a Farmland Market Directory of Land Sales which is generated from information provided by land agents across the country. Whilst this information does not disclose the exact purchase price, it does provide an indication as to how closely aligned the asking price was to the eventually-agreed sales value. Hence, this is considered the starting point for greenfield land value evidence.

4.6 Our review of the latest survey (H2 2025) has shown that there were no transactions recorded across East Sussex during the sample period. To provide a broader indication, we have considered the sales recorded across neighbouring West Sussex and Kent, noting that both have historically achieved higher values on average by comparison.

4.7 We have also obtained transactional data and listing prices on CoStar and Rightmove to support our understanding of greenfield land values in Hastings and the surrounding areas. Table 4.1 summarises the achieved and asking price data obtained in our search.

Table 4.1 – Agricultural Land Achieved and Asking Prices Summary

Address	Source/Type	Site Area (ac)	Site Area (ha)	Value (£)	Value (£/ac)	Value (£/ha)

Sources: As referenced.

4.8 Our search identified a total of 38no. transactions or listings (including the data obtained from the RICS / RAU), comprising a mix of agricultural and paddock land, with some sites also including areas of woodland. We have specifically omitted any sites which have either permanent or semi-permanent structures, or agricultural buildings (i.e. barns, stores, stables etc.). The transactions and listings range from £4,912 - £44,444 per acre (£12,137 - £109,824 per hectare), with an average of £17,182 per acre / £42,457 per hectare.

4.9 We typically classify paddock land as small-scale (i.e. generally less than 5-acres) agricultural / 'pony paddock' greenfield land which is on the edge of an existing settlement. In our experience, paddock land typically transacts at a premium above agricultural land, and this trend is evident within the sample. When isolating those up to 5-acres in size, the range in values increases to £20,000 - £44,444 per acre, with an average of £34,144 per acre / £84,371 per hectare.

4.10 On this basis, omitting the paddock land value from the sample produces a range of agricultural land values from £4,912 - £31,111 per acre (£12,137 to £76,877 per hectare). This equates to an average of £14,002 per acre (£34,599 per hectare) across the remaining sample.

4.11 The majority of the sample comprises sites which are currently advertised for sale, a number of which were not shown as 'SSTC' or 'Under Offer'. This may indicate that the listing prices have not been at a level to attract and agree a sale, although that is not to say that circumstances will remain the same. Given the proportion of the sample obtained from property marketing portals, we are also conscious of the potential for hope value to have been included within some of the listing prices.

4.12 We are also mindful that the average arising from the sample is higher than those reported for greenfield / agricultural sites in our review of market reports and commentaries, which were observed to range between c. £8,000 - £12,000 per acre. Given the limitations associated with greenfield land across Hastings (as identified in the Natural England classification map), coupled with recent decreases reported in land prices across the south-east, we would expect prices in Hastings to be lower than some of those identified in Table 4.1.

5 Brownfield Land Values

5.1 In this section, we review values for development land across Hastings and the surrounding areas. As with agricultural land, we have called upon transactional evidence and listing prices for sites advertised for sale on various property portals. This process attempts to establish existing use values for previously developed land.

5.2 We recognise that it is difficult to generalise what brownfield land is 'typically' worth across an area, given that all sites are unique. For plan-wide viability studies, identifying an appropriate BLV can be challenging given the high number of variables which influence the value of brownfield development (e.g. the exact use, obsolescence, buildings / structures for demolition, contamination, site remediation, neighbouring uses and restrictions etc.). Further considerations, such as existing planning consents or the potential for a change of use, compound this difficulty and can result in a wide range of values.

5.3 In light of the above, careful consideration has to be given to whether the values are aspirational and also if they represent policy-compliant market values. Where possible, we have carried out research into any consents attached to sites and whether they are policy compliant (i.e. inclusive of affordable housing and other 106 contributions as required by current planning policies). More weight is given to evidence which is policy-compliant. However, it is difficult to be certain that developers have not offered values (and / or landowners have not asked for values) which are not sustainable in planning policy terms and therefore challenge viability at development management stage. This practice is contrary to the NPPF / PPG, and we have been mindful of the potential for this in our assessment of the evidence.

5.4 Our approach seeks to cross-reference different types of brownfield land data to inform our BLV assumptions, including:

- Transactions and listings of previously developed sites which benefit from residential planning permission;
- Transactions and listings of commercial land;
- Review of land assumptions adopted by MHCLG for policy appraisal;
- Transactions and listing of industrial land;
- Review of BLVs adopted in area-wide viability studies for neighbouring authorities;

5.5 It is important to reiterate that this is a plan-wide study and thus the purpose of our research is to establish a suitable BLV for the development typologies to be appraised. As set out earlier, the BLV does not mean that all land will, or has to, transact at a similar level across Hastings – it is simply the benchmark for viability purposes.

Residential Development Land

5.6 We have first sought to identify brownfield sites across Hastings with planning permission for residential development, as summarised in Table 5.3.

Table 5.1 – Brownfield Land with Residential Planning Permission

Address	Source/Type	Area (ac)	Area (ha)	Value (£)	Value (£/ac)	Value (£/ha)	Comments
Land at 2 Filsham Road, St. Leonards-on-Sea, TN38 0AU	Rightmove – Listing Price	0.11	0.05	£15,000	£133,096	£328,947	HS/OA/25/00469 – Outline permission for 1no. detached house.
Battle Road, St. Leonards-On-Sea	Rightmove – Listing Price	0.08	0.03	£90,000	£1,174,682	£2,903,226	HS/FA/24/00050 – Full permission for 1no. dwelling
Chambers Road, St. Leonards-On-Sea	Rightmove – Listing Price	0.27	0.11	£500,000	£1,876,682	£4,638,219	HS/FA/24/00239 – Permission for 5no. dwellings (appeal allowed).
West Hill Road, St Leonards, East Sussex, TN38	Rightmove – Listing Price	1.71	0.69	£795,000	£466,184	£1,152,174	HS/FA/24/00710 – Full permission for 37no. dwellings (0% AH)

Source: As referenced.

5.7 Information on brownfield sites with planning permission across Hastings is scarce. The majority of listings with planning permission were shown to be on greenfield sites. Most listings identified are for minor developments and are therefore below the threshold for affordable housing contributions. Developers of these sites will not encounter the same financial burdens as those which trigger the policy requirements and require additional developer contributions, which may in turn mean that more capital is available to fund the acquisition (i.e. land value). Applying these inflated small-site benchmarks to an entire area is therefore likely to distort the viability testing for larger schemes that are subject to other policy requirements.

5.8 Further, developers pursuing a single-dwelling scheme often operate with a distinct set of drivers that can justify paying higher land values. Unlike institutional volume builders who may prioritise profit margins and scalable returns, an individual or small-scale developer may intend to occupy the home themselves as a bespoke principal residence, or they may possess personal ties to a specific area or neighbourhood (i.e. special value / special purchaser – see RICS Valuation Global Standards). Consequently, this difference in development objective can lead to higher upfront land costs that a profit-driven developer would reject.

5.9 Our search identified a single brownfield site with a consent which exceeds the existing affordable housing policy threshold and would therefore be expected to deliver units on-site. However, further interrogation of the permission shows that the application was accompanied by a site-specific viability assessment which demonstrated that the provision of on-site affordable housing would be unviable – a conclusion which was agreed by the Council's independent review. Despite this, the £ / acre rate at which the site is listed is towards the lower end of the sample identified, suggesting a policy-compliant land value should be less than this amount.

Commercial Land Transactions

5.10 The use of commercial land value evidence is an established means of informing brownfield land values for policy appraisal.[13] Accordingly, we have obtained data from sales of land in commercial use over the past 2 years where the plot size has been disclosed. Our initial search did not reveal any transactions within Hastings Borough, so we have expanded the radius across East Sussex, as summarised in Table 5.2.

Table 5.2 – Commercial Land Values

Address	Date Sold	Size (ac)	Price	£ / ac
Penfolds, Wealden, BN27 3SS	Sep 25	2.00	£1,500,000 (asking)	£750,000
Pilgrims' house, Brighton, BN2 0GB	Jun 25	0.62	£2,900,000	£4,677,419
Averys Nursery, Lewes, BN8 5RU	Dec 24	7.26	£5,600,000	£771,349
Beach Road, Lewes, BN9 0BX	Nov 24	1.50	£1,640,000	£1,093,333

Source: CoStar, 2026.

5.11 The data shows that sales of commercial land on a £ / acre basis are broad. This is not unexpected, as there will be several different variables which will influence the prices

[13] MHCLG, 2019. Land value estimates for policy appraisal 2019.

(e.g. location, condition, size, access, transport, purchase type, tenant covenant etc). For this reason, whilst the data provides a range of achieved values (£750,000 - £4.68m per acre) which can be used to steer the assumptions, it is not possible to reconcile the 'typical' values associated with commercial land across East Sussex or Hastings Borough.

5.12 In its 2026 publication, 'Land value estimates for policy appraisal', the Ministry for Housing, Communities and Local Government (MHCLG) estimate industrial land values in Hastings to be approximately £303,514 per acre (£750,000 per hectare). These 2023 baseline estimates are designed for use by MHCLG, its agencies, and local authorities when conducting economic appraisals of projects and policies. The estimate sits below the range identified in Table 5.1 and Table 5.2, albeit some of the sites identified above are from different authority areas in East Sussex.

5.13 In this respect, we have also obtained data from transactions across Hastings Borough which are designated by CoStar as being in industrial or light industrial use and where the land area is disclosed. The sales identified are summarised in Table 5.3.

Table 5.3 – Hastings Industrial Land Values

Address	Date Sold	Size (ac)	Price	£ / ac
Drury Lane, St Leonards on Sea, TN38 9BA	Jul 25	0.50	£400,000	£800,000
Units 10-12, Burgess Road, Hastings, TN35 4NR	Jun 25	0.15	£252,000	£1,680,000
Menzies Road, St Leonards on Sea, TN38 9BG	Sep 24	0.21	£1,030,000	£4,904,762
10 Menzies Road, St Leonards on Sea, TN38 9BB	Jul 24	0.40	£700,000	£1,750,000

Source: CoStar, 2026.

5.14 The industrial transactions show a similar wide range to the commercial land value evidence and a significant uplift on the MHCLG data.

Brownfield BLV Evidence from Neighbouring Authorities

5.15 The final dataset considered in our assessment of brownfield land values collates the BLVs adopted in plan-wide viability assessments undertaken in neighbouring authority areas, as set out in Table 5.4.

Table 5.4 – BLVs from Neighbouring Authorities

Local Authority	Consultant	Date	BLV £ / ac	BLV £ / ha
Eastbourne Borough Council	HDH Planning & Development	Oct 2022	£730,000	£1.80m
Wealden District Council	BNP Paribas	Jan 2026	£350,000	£865,000

Local Authority	Consultant	Date	BLV £ / ac	BLV £ / ha
Rother District Council	Porter Planning Economics	Oct 2018	£316,000 - £392,000	£780,000 - £960,000
Ashford Borough Council	Three Dragons	May 2017	£182,000 - £526,000	£450,000 - £1.30m
Folkestone & Hythe District Council	Chilmark Consulting	Sep 2017	£202,000	£500,000
Tunbridge Wells Borough Council	Dixon Searle Partnership	Aug 2019	£344,000 - £1.42m	£850,000 - £3.50m

Sources: As referenced.

5.16 The evidence again shows a wide-ranging set of assumptions for brownfield BLVs adopted in neighbouring authority areas. It is noted that those BLVs at the lower end of the respective ranges are observed to fall below any of the market evidence collated from transactions and listings, which is consistent with the rationale set out in the RICS Professional Standards in that the BLV should not be expected to equate to the market value, or the price to be paid in the marketplace. As such, it may be appropriate to adjust the evidence identified to ensure it provides an appropriate benchmark for plan viability testing.

6 Benchmark Land Value Assumptions

6.1 This chapter sets out the BLV assumptions to be adopted within the viability testing.

Greenfield Land Values

6.2 Table 6.1 summarises the greenfield land evidence identified in our review.

Table 6.1 – Greenfield Land Value Evidence Summary

Source	Sample	Min. £ / ac	Max. £ / ac	Avg. £ / ac
Market Reports	9	£7,750	£12,250	£9,508
Larger Sites (>5 ac)	33	£4,912	£31,111	£14,183
Smaller Sites (<5 ac)	5	£21,154	£44,444	£36,972

Source: AVL, 2026.

6.3 The data arising from market reports and commentaries shows the most consistency, with all values falling within a relatively confined range of c. £5,000 per acre. When isolating the sales and listings of sites providing over 5-acres, this range expands to c. £26,000 per acre, although the average remains within a reasonable tolerance of that calculated from the market report data. It is clear that smaller sites of less than 5-acres show values or listing prices which are higher than the other two data sets, which is consistent with trends observed in other local authority areas.

6.4 It is important to recognise that small agricultural sites require planning to be used as paddocks and hence we cannot conclude that all small sites within Hastings will command values akin to those identified in our review. Instead, cases will need to be considered on an individual basis to reflect the site-specific circumstances. We are also conscious of the size of the sample, and potential for outliers to influence the data.

6.5 For greenfield typologies, the bottom-up approach is based on the net value per acre / hectare for agricultural land (existing use value (EUV). This EUV is ‘grossed up’ to reflect the difference in net-developable areas to gross-site areas of the sites. There is a relationship between the quantum of land (size of development opportunity), the net-to-gross ratio and the net BLV expressed as £ per net developable area. If the net-to-gross ratio increases, then the multiplier increases and vice versa.

6.6 The BLV divided by the (higher) value per acre / hectare gives an uplift multiplier or premium. These are the minimum values that we would assume for the purpose of our hypothetical viability appraisals, and they act as the benchmark to test the RLVs of schemes to determine whether sites would come forward for development.

6.7 Note that the premium assumptions reflect the likelihood of residential development coming forward on greenfield sites. We also account for the size of the site, as it is likely purchasers of larger sites can benefit from economies of scale, thus slightly reducing the premium above the EUV.

6.8 In previous iterations of the viability testing, we adopted a Benchmark Land Value of £170,000 per acre for greenfield sites. This reflects a multiplier premium of between 12 – 18x EUV when assuming the averages arising from the market reports and larger site data set out in Table 6.1 (excluding smaller sites for aforementioned limitations)

i.e. £9,500 per acre. We are satisfied this remains a reasonable uplift to incentivise landowners to release sites for development and have upheld this rate in our updated testing.

Brownfield Land Values

6.9 Table 6.2 summarises the brownfield land evidence identified in our review.

Table 6.2 – Brownfield Land Value Evidence Summary

Source	Sample	Min. £ / ac	Max. £ / ac	Avg. £ / ac
Residential Dev. Land	4	£133,096	£4,638,219	£2,255,642
Commercial Land	4	£750,000	£4,677,419	£1,823,025
Industrial Land	4	£800,000	£4,904,762	£2,283,691
Neighbouring WPVs	6	£182,000	£1,420,000	£466,500

Source: AVL, 2026.

6.10 We are mindful of our earlier comments in respect of brownfield land values, both in terms of the wide variance in the £ / acre rates and how this can be influenced subject to a number of different factors – including the potential hope value attached to a prospective change of use. Overall, the evidence demonstrates the difficulty in using market evidence to inform BLVs for the purpose of plan testing.

6.11 As a means of comparison, previous iterations of the testing have assumed a brownfield BLV of £350,000 per acre. This falls within the range of market evidence obtained and summarised in Table 6.2, albeit towards the lower end. The evidence suggests that values equivalent to c. £135,000 - £4.90m per acre have previously provided the minimum incentive for landowners to release brownfield sites, although some of these are based on development potential.

6.12 It is noted that the evidence from viability assessments undertaken in neighbouring authority areas demonstrates the most confined range as well as the lowest average. This may demonstrate the divergence between the prices paid for land in the marketplace (i.e. as shown through review of transactions and listings) and the BLVs adopted for the purpose of policy appraisal. We have been mindful of this when determining the brownfield BLV.

6.13 Adopting a stand-back judgment, we believe that the evidence justifies an increase to the BLV assumed in earlier versions of the viability assessment. We consider it a reasonable expectation that brownfield BLVs could fall between the baseline estimate published by MHCLG for Hastings (c. £305,000 per acre), which are noted to date back to 2023, and the West Hill Road listing (£470,000 per acre), which demonstrates the incentive required to deliver a site without any affordable housing contributions. The majority of brownfield BLVs in neighbouring areas are also shown to fall within this range.

6.14 In light of the above, we are proposing to adopt a brownfield BLV of £400,000 per acre. This reflects an uplift on the previous rate assumed of £350,000 per acre in light of the evidence identified, but remains consistent with the rates adopted in neighbouring authority areas.

Conclusion

6.15 The BLVs attempt to strike a balance between the competing interests (developers, landowners and the aims of the planning system) whilst still securing the maximum benefits in the public interest through the granting of planning permission – therefore meeting the aims of the PPG.

6.16 Should the RLV exceed the BLV once all abnormal and policy costs are taken into account in the appraisal, then there is scope for the landowner to secure a higher premium. Should any site-specific assessments incur any additional costs that have not been allowed for in our BLV assessments then these costs need to be reflected in a reduced land value as per the PPG. In this respect, these brownfield BLVs are considered to be conservative and provide an inherent 'buffer' as sites which are the most obsolete are likely to come forward more quickly and at conceivably lower values.

6.17 It is important to note that the BLVs contained herein are for 'high-level' district-wide viability purposes, and the appraisals should be read in the context of the BLV sensitivity table (contained within the appraisals).

6.18 It is important to emphasise that the adoption of a particular BLV in the base-case appraisal typologies in no way implies that this figure can be used by applicants to negotiate site-specific planning applications.

6.19 Where sites have obvious abnormal costs, these costs should be deducted from the value of the land. The land value for site-specific viability appraisals should be thoroughly evidenced, having regard to the EUV of the site (as is best practice in the PPG). This report is for plan-making purposes and is 'without prejudice' to future site-specific planning applications.

6.20 Furthermore, we are not saying that land can *only* be acquired in the Borough for these BLVs. As the appraisals show, there is often a surplus between the RLV and BLV, which could be put to a stronger land bid or retained as profit. Furthermore, the sensitivity scenarios show the impact on the surplus (i.e., the difference between RLV and BLV) for various levels of BLV and profit %.

1. What we do (viability)…

- Site-specific FVAs for S106 (private & public)
- **Local Plan & CIL Viability Studies**
- Heritage - Conservation deficit / enabling development
- Contribution to industry guidance – RICS & RTPI

2. Background & Objectives

Aspinall Verdi

"Hastings Borough Council wishes to commission a viability assessment to support the production of a new local plan and to assess the potential for a Community Infrastructure Levy."

"The Council will be reliant upon the Local Plan viability assessment to ensure that developer contributions being required from strategic sites allocated in the Plan are not only viable, but also seek to maximise the potential for contributions from new developments.

"The purpose of this project is to ensure that the local plan is deliverable, and that local plan policy and infrastructure requirements do not make development in the borough unviable.

2. Background & Objectives

Aspinall Verdi

2020 - 2021

Original commission, assessment of Reg. 18 policies, potential for CIL, viability assessment submitted Jan 2021.

2022 - 2025

Updates / iterations, sensitivity testing, updated draft assessment (Summer 2024), Executive Summary (Dec 2025).

June - July 2026

Updated market research, cost review, revised typologies, **stakeholder workshop.**

August 2026

Feedback, amends & finalise appraisals

3. Purpose of today

How should plan makers and site promoters ensure that policy requirements for contributions from development are deliverable?

The role for viability assessment is primarily at the plan making stage. Viability assessment should not compromise sustainable development but should be used to ensure that policies are realistic, and that the total cumulative cost of all relevant policies will not undermine deliverability of the plan.

It is the responsibility of plan makers in collaboration with the local community, developers and other stakeholders, to create realistic, deliverable policies. Drafting of plan policies should be iterative and informed by engagement with developers, landowners, and infrastructure and affordable housing providers.

4. Viability Overview

Aspinall Verdi

The government's approach shifts the focus of viability assessment to plan making. The purpose of viability assessment in the plan-making stage is to test, on an area-wide basis, whether the planning policies in a plan are realistic, and that the total cost of the policies will not undermine the deliverability of the plan. This is necessarily at a more strategic level, and the PPG indicates that testing should be proportionate – for instance, not all sites need to be assessed for viability in plan making, assurance is not required that all sites are viable, and site typologies can be used. Estimates across site typologies are inherently broader, and a balance needs to be struck: the viability assessment should be sufficiently detailed to provide a fair assessment but not so detailed that it makes the plan-making process overly complicated or expensive.

Source: RICS, 2019.

- Key takeaways:
  - Are policies realistic & deliverable?
  - Proportionality – typology approach
  - Balanced assessment (strategic level, not overly complicated)

Graham Stallwood
Interim Chief Executive
The Planning Inspectorate

15 July 2026

Dear Graham,

Local Plan examinations: deliverability and viability

The plan-led approach is, and must remain, the cornerstone of our planning system. This government remains determined to drive local plans to adoption as quickly as possible in order to achieve our ambition of universal plan coverage and to ensure that plans contribute positively to increasing rates of housebuilding and infrastructure delivery.

In light of the December 2026 submission deadline for legacy system local plans, you will be acutely aware that we are approaching a period of higher demand for local plan examination services. That forthcoming rise in demand obviously takes place against a backdrop of volatile economic conditions, largely owing to current geopolitical tensions, which is likely to impact on local plan preparation.

My letters to your predecessor of 8 October and 27 November 2025 concerning examination flexibilities, green belt reviews and the duty to co-operate, focussed on ensuring that the Planning Inspectorate could better support the government's objective of achieving universal plan coverage. I am writing further to those letters to emphasise the importance of taking an appropriately pragmatic and proportionate approach in respect of deliverability and viability when examining local plans.

As you know, the benefits of an up-to-date local plan are significant. Local plans are the best way for communities to shape decisions about how to deliver the housing and wider development their areas need. They enable local areas to set their strategy for future growth and their approach to protecting and enhancing the environment, and they provide the certainty and confidence required to bring development forward across the country. In the absence of an up-to-date plan, there is a high likelihood that development will come forward on a piecemeal and speculative basis, with reduced public engagement and fewer guarantees that it will make the most of an area's potential.

While deliverability and viability must remain important considerations in plan making, substantial economic volatility can generate uncertainty which may not reflect the longer-term prospects for delivery over the life of plan. With the benefits of up-to-date local plans firmly in mind, it is important that local plan deliverability and viability challenges be considered in a broad context, especially

*".. emphasise the importance of taking an appropriately **pragmatic and proportionate approach** in respect of deliverability and viability…"*

*"…it is important that local plan deliverability and viability challenges be **considered in a broad context**…when economic conditions are volatile and are causing fluctuations.."*

*"…allocations should generally be assessed against their prospects of **delivery over the plan period as a whole**, rather than solely against current market conditions."*

*"Inspectors should **distinguish between uncertainty** arising from prevailing market conditions and evidence indicating a **fundamental obstacle** to delivery."*

5. Emerging assumptions

- Key components:
  1. Typologies
  2. Value assumptions
  3. Development cost assumptions
  4. Policy requirements & costs
  5. Non-residential assumptions
  6. Benchmark land value

5. Emerging assumptions - Typologies

Aspinall Verdi

- Site list provided by HBC (resi, mixed use, commercial)
- Grouped based on:
  - Site size (ac/ha)
  - Unit capacity
  - Density
  - Type – houses / flats / mixed / new-build / conversion
  - Value zone
  - New-build / conversion
- Includes ‘hypothetical’ typologies to ensure balanced & varied assessment
- Unit mix – HEDNA
- Unit Sizes – NDSS

5. Emerging assumptions - Typologies

Aspinall Verdi

- Generic development scenarios for different uses:
  - BTR – single family housing & multifamily
  - Older persons' housing:
    - Age restricted / retirement living
    - Extra care

- Outcome:
  - 32no. residential typologies
  - 4no. BTR
  - 4no. OP housing
  - 24no. non-resi (employment & commercial)

5. Emerging assumptions – Land Value

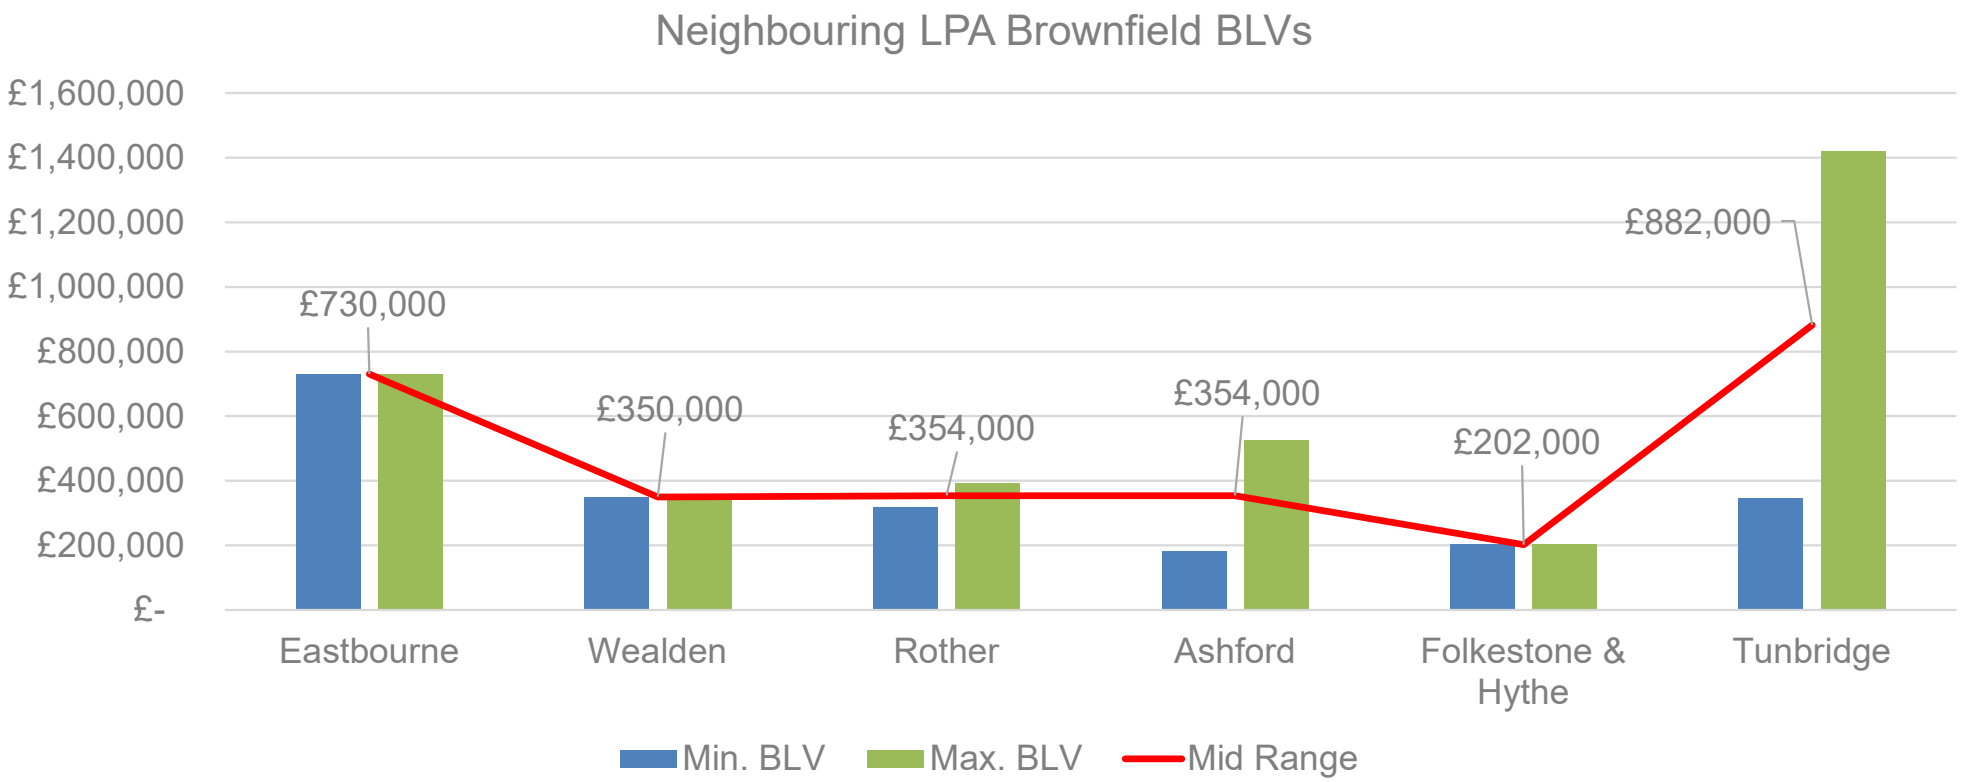
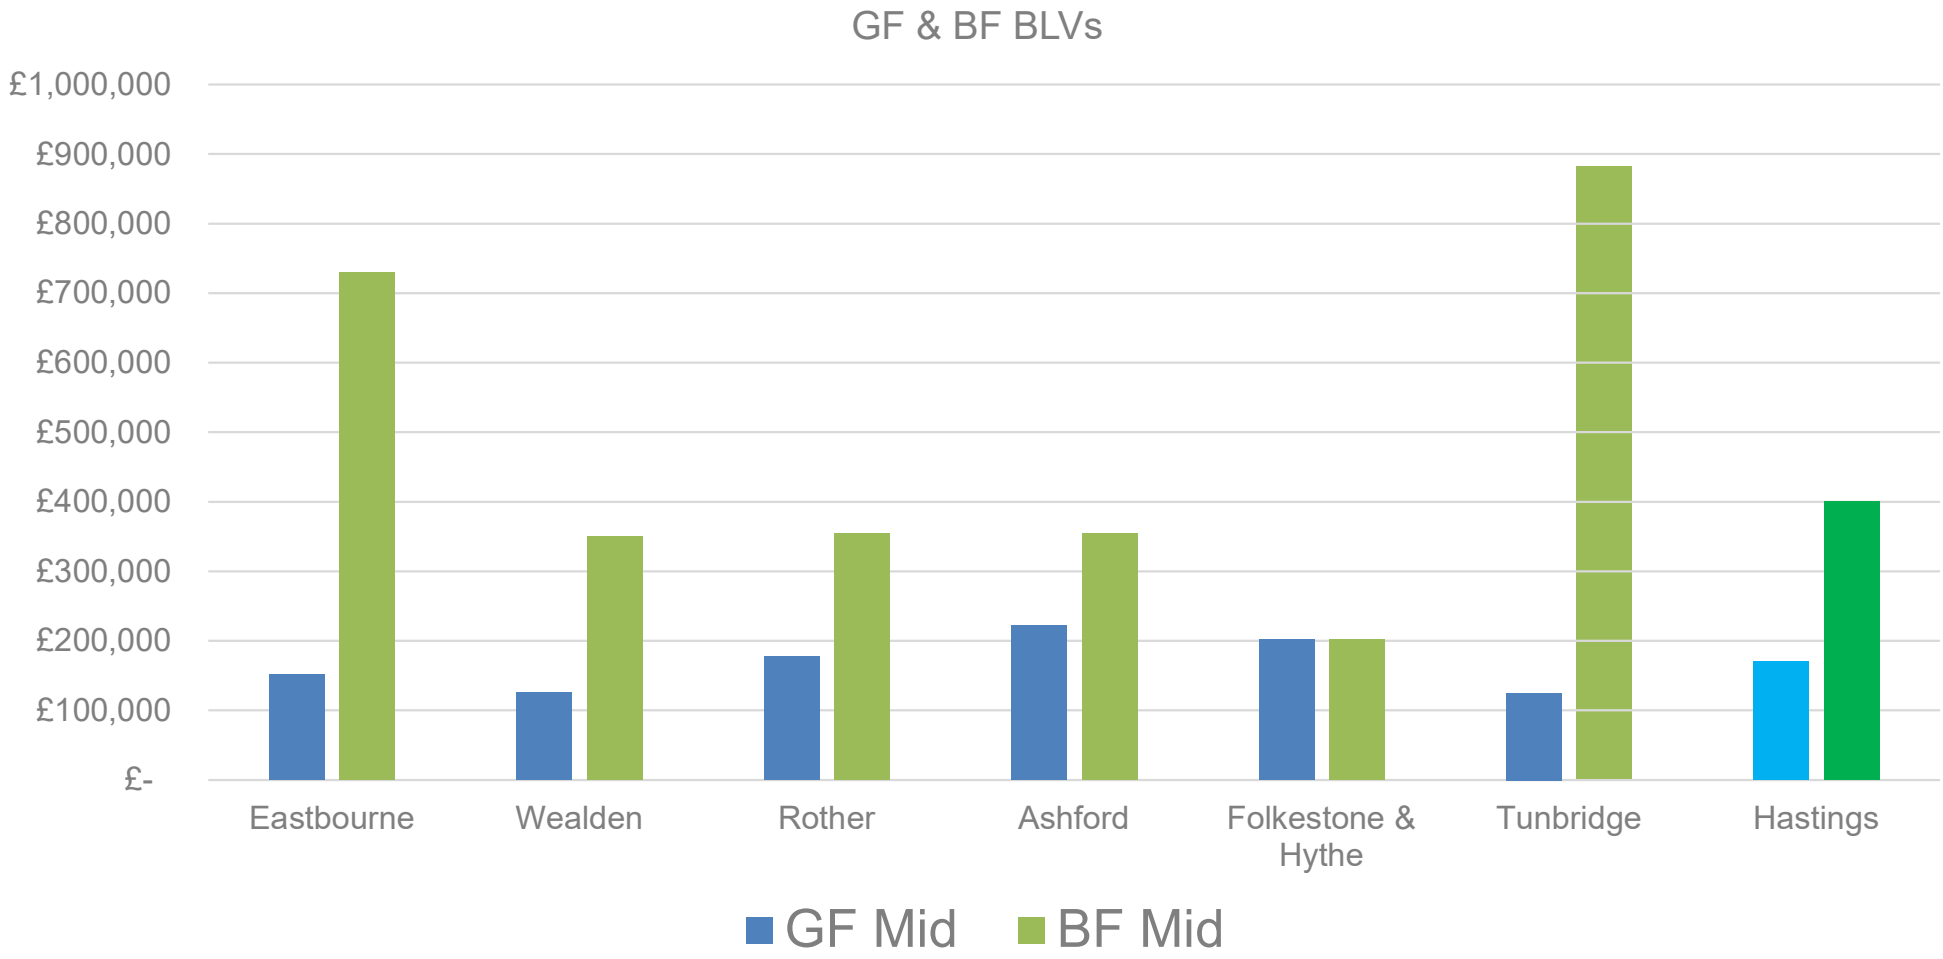
5.1.3 The BLV should not be expected to equate to the market value. As set out in Chapter 2, the PPG states that they could differ on account of both the assumptions made and the methods employed. The BLV is not a price to be paid in the marketplace; it is a mechanism by which the viability of the site to provide developers' contributions can be assessed. It should be set at a level that provides the minimum return at which a reasonable landowner would be willing to sell.

Source: RICS, 2019.



5. Emerging assumptions – Land Value



- Updated BLV assumptions:
  - Greenfield = **£170,000 per acre**
  - Brownfield resi = **£400,000 per acre**

Appendix 4 – Stakeholder Feedback Matrix

REF	Item	Consultee & Date	Comment / Feedback / Relevant Extract	Evidence / Supporting Information Submitted?	AV Comments
1.	Residential Sales Values	Generator Group 31/07/2026	Sales values have increased by only 1.04% to 1.69% compared with the 2024 assumptions; however, this should be considered in the context of a softening housing market. Assumptions should be validated against achieved sales prices rather than asking prices and testing sensitivities based on flat and -5% sales values to reflect current market uncertainty.	No - evidence was provided to show that output has been reported as decreasing but no evidence to demonstrate lower sales values.	We have reviewed the assumptions against the data collected in our market report and remain content that they are reasonable. The assumptions are informed by a mix of new-build completed sales data, asking price data and also second-hand transactions, with the greatest weight given to achieved sales. Asking data is reviewed for the purpose of looking at supply levels with regard given to the RICS hierarchy of comparable evidence when forming our value assumptions. Our initial assumptions and the evidence supporting them are set out in our Residential Market Paper, which will be appended to the Viability Main Report. These show the headline values and £ / psf rates adopted are within the range of transactional and asking price evidence identified. Sensitivity tables accompany all appraisals and show the impact of both increases and decreases to sales values, amongst other inputs.
2.	Finance Rate	Generator Group 31/07/2026	Finance costs appear understated. The assumed 7.5% debt rate is at the optimistic end of the current market and is unlikely to reflect the typical developer operating in	Some – links to Diamond Property Finance and Construction Capital articles, however there is no site-specific	We note the comments received; and consider that an adjusted rate of 7.5% is reasonable, based on our experience of undertaking other recent plan-wide viability assessments. The assessment needs to take a balanced view of rates across a plan period and not be

REF	Item	Consultee & Date	Comment / Feedback / Relevant Extract	Evidence / Supporting Information Submitted?	AV Comments
			Hastings. A rate of around 8.0% to 9.0% would be more representative. In addition, the model assumes 100% senior debt funding, whereas development is typically financed through a mix of senior debt, mezzanine finance and equity. Applying a single senior debt rate across a fully debt-funded structure is therefore likely to understate finance costs, inflate residual land values and overstate the level of CIL supportable by development.	evidence provided from developments in Hastings.	disproportionately influenced by recent changes in finance markets. The articles provided within the feedback quote similar ranges of 6.5 – 9.5% and 6.5 – 9.0% for senior debt in 2026. Arrangement fees are than quoted between 1-2%. The all-in assumption of 7.5% falls within this range, albeit towards the lower end. We would reiterate the need for this assessment to remain proportionate. It does not go into the granularity of finance arrangements for different-sized sites or the 'type' of developer expected to deliver them.
3.	Residential Build Cost	Generator Group 31/07/2026	Build cost assumptions are understated. The appraisals rely on current BCIS lower-quartile and median build costs and do not account for construction cost inflation over the plan period. Increases in build and tender costs should be explicitly modelled, with sensitivity testing based on BCIS forecasts. The use of lower-quartile BCIS rates are not appropriate for the Hastings market, and median rates would better reflect local delivery	Yes – cost plan from a contractor on a recent St Leonard's scheme and a copy of correspondence providing brief commentary.	The baseline appraisals include median BCIS build costs on most typologies, with lower quartile used on developments over 100no. units in line with data from BCIS, showing that rates decrease with size of development. Please see Appendix 7 of our main viability report for copies of the data. Our appraisals need to include a fixed cost across all typologies to allow for a fair assessment, and the approach is supported by the Viability PPG and RICS Standards. Each appraisal includes sensitivity testing to demonstrate the impact of adjustments to costs on viability. This can be used to understand how

REF	Item	Consultee & Date	Comment / Feedback / Relevant Extract	Evidence / Supporting Information Submitted?	AV Comments
			conditions and the costs faced by SME developers. Development costs (including base build, abnormals, contingencies, externals, garages and FHS allowances) are underestimated, particularly in the case of constrained brownfield sites in Hastings, resulting in overstated residual land values and CIL capacity.		viability may change in response to cost inflation over a plan period, allowing for informed decisions to be made. Please note that the inclusion of forecasts within plan viability can lessen the reliability of the appraisals, as it is not possible to accurately determine changes in future cost and value markets. We have reviewed the cost and source and remain content that this is the most recently published information on the Future Homes Standard. Applying the blended rate is deemed reasonable and proportionate for plan viability testing. FHS rate can vary subject to the unit type and specific development, it is outside the scope of this assessment to determine the built form and design of schemes to be delivered (i.e. high / low / mid-rise) and hence further adjustments cannot be applied reliably. The cost information submitted has been considered – a reasonable proportion of the example development provided is in groundworks (33%+) which may suggest that there may've been abnormal site conditions. A small allowance for fees has also been included, which is applied separately in our appraisals. Further interrogation and information would be required to ensure accuracy and applicability of

REF	Item	Consultee & Date	Comment / Feedback / Relevant Extract	Evidence / Supporting Information Submitted?	AV Comments
					costs information to apply more broadly in plan viability testing.
4.	Site Preparation (demolition and abnormal) Costs	Generator Group 31/07/2026	Site Preparation costs are underestimated. The £50,000/acre allowance for site clearance and demolition is insufficient and notes no explicit allowance for contamination, ground conditions, land stability or geotechnical works, despite Hastings' known constraints.	Yes – Cost plan for a recent St Leonards scheme has been submitted as evidence to support these assumptions.	As noted above, the groundworks allowance in the cost plan forms a substantial portion of the total costs, and further information is required to understand why / whether this would be applicable to all sites for plan viability testing. As per the PPG, abnormal costs should be reflected in the BLV, including those required for contamination, ground conditions, land stability or geotechnical works. It is a reasonable expectation that developers will negotiate lower values where significant site constraints are known.
5.	Contingency Cost	Generator Group 31/07/2026	The 3.0%-5.0% contingency range too low for constrained brownfield and sloping coastal sites, 5.0%-7.5% would be more appropriate.	No - no evidence to support a contingency closer to 5.0-7.0%	We are content this remains reasonable. The range is supported separately in the correspondence provided with Greymoor.
6.	Benchmark Land Value	Generator Group 31/07/2026	The £400,000/acre assumption is inconsistent with comparator authority evidence and suggests it may not reflect a realistic existing use value plus a reasonable landowner premium.	No – no evidence to support why a higher figure should be adopted.	We note the comments received and have undertaken a more detailed review of the sites being considered for allocation within the plan, including the existing uses, condition and obsolescence. This has shown that a reasonable proportion of the sites lack an existing use from which a BLV can be informed, including a number of derelict or vacant buildings, cleared

REF	Item	Consultee & Date	Comment / Feedback / Relevant Extract	Evidence / Supporting Information Submitted?	AV Comments
					sites and those with temporary operations. In turn, the baseline assumption of £400,000 per acre, which is higher than that stated by MHCLG for land in industrial use in Hastings (i.e., EUV), may overstate the existing use value of some of these sites. In general, the approach taken to setting Benchmark Land Values accords with RICS and national planning policy in regard to testing viability for plan making purposes. Our assumptions are informed by market evidence and has been cross-checked against industry benchmarks and published studies. This is detailed within our Land Market Paper, which will be appended to our Main Viability Report. In our previous work, we have seen premiums correlate with housing value zones. In higher value areas, landowners might require a higher incentive to sell their land, given that a developer could achieve higher returns, when compared to developing a similar site in a lower value zone. We also account for the size of the site, as it is likely that purchasers of larger sites can benefit from economies of scale, thus slightly reducing the premium above the EUV. We have then applied a floating percentage premium uplift on EUV to establish a BLV for our viability testing. This 'floating' premium is

REF	Item	Consultee & Date	Comment / Feedback / Relevant Extract	Evidence / Supporting Information Submitted?	AV Comments
					adjusted by typology depending on the location of the typology by value zone to represent the increased incentive a landowner may need to sell in the higher value zone (for example) compared to the lower value zone. We note that we have not been provided any specific transactional evidence to consider. We would welcome the opportunity to review any comparable land sales or supporting evidence.
7.	Sales Rate	Generator Group 31/07/2026	Sales rate assumptions should reflect local market conditions. Sales rates in the South East are among the weakest nationally and have declined from their 2021 peak. Given Hastings' position as a lower-value coastal market within this region, the assumed absorption rates must be are realistic. The sales rate should be confirmed and run a sensitivity on a slower absorption rate.	Yes – reference to Hometrack Data Services, New Build Sales Rates Report, April 2026	The decline in sales rates is acknowledged and has been observed in our experience of undertaking site-specific viability assessments across the south-east for decision making purposes in recent months / years. We have reviewed and adjusted the rates adopted in our appraisals, which now range from 0.35 – 1.15 per week, regardless of the number of outlets. For some of the larger sites, it is expected there could be more than outlet and hence this will be further decreased / halved. The UK average reported in the Hometrack report is 0.67 per outlet per week, with the south east average marginally lower at 0.61 per week, and hence our range is considered within a reasonable tolerance of the average. As with the finance costs, it is important to consider how sales rates may perform over the

REF	Item	Consultee & Date	Comment / Feedback / Relevant Extract	Evidence / Supporting Information Submitted?	AV Comments
					plan period as a whole, ensuring that the assessment of policy requirements is not disproportionately influenced by current market conditions.
8.	Retrofit	Serenity Projects 31/07/2026	We would encourage Passivhaus, EnerPHit and fabric-first options to be tested and costed on their own terms, rather than folded into a broad “net zero” allowance.	No	Our appraisals have tested the emerging policy requirements in respect of design and sustainability standards, including Net Zero Carbon. The precise standard and efficiency is a matter for policymakers.
9.	Net Zero Build Cost Uplift	Sea Change Sussex 31/07/2026	The cost implications of the Sustainable Design and Construction policy for commercial uses do not appear to be reflected in the current assumptions. The draft policies are considered to require significantly higher design and construction standards, with associated costs that are not captured within standard build cost allowances. An uplift of approximately 35% is suggested to account for these additional sustainable design requirements.	Yes – reference to the UK Green Building Council research paper - Building the Case for Net Zero Buildings: A feasibility study into the design, delivery and cost of new net zero carbon buildings.	Our workshop slides erroneously excluded the costs advised in the Net Zero Policy – Technical Evidence Base (July 2026) by Introba and Currie & Brown. This includes additional cost uplifts of £31 psm for industrial uses and £40 psm for offices, both of which have been adopted in our modelling. We have also applied the office rate to retail uses tested in our assessment. When compared with the base build costs, these uplifts equate to increases of 14 – 30%. We understand that some of the standards referred to in the feedback are no longer being pursued (e.g. BREEAM Excellent).
10.	Contingency Cost	Sea Change Sussex	Hastings has very challenging viability for commercial development due to the vast majority of sites in the district being the ‘left over sites’	No	While local constraints exist across Hastings, applying a lower contingency allowance on greenfield sites is aligned with viability practice. Challenges such as topography or ground

REF	Item	Consultee & Date	Comment / Feedback / Relevant Extract	Evidence / Supporting Information Submitted?	AV Comments
		31/07/2026	that carry higher development risk, wider constraints and greater uncertainty than the average development would. For this reason, we would typically assess based on minimum 5% contingency, we see no evidence suggesting risks would be lower on any of the proposed greenfield sites.		conditions represent known physical factors that are properly costed as abnormal development costs, which directly reduce the Benchmark Land Value. Contingency is intended to absorb unforeseen risks, and greenfield sites eliminate major latent hazards like legacy contamination or unmapped utilities. In turn, the unquantifiable risk is lower.
11.	Location Factor	Sea Change Sussex 31/07/2026	Currently building cost assumptions omit to include an uplift for costal location which would be appropriate across most of Hastings. It is widely acknowledged that buildings exposed to costal conditions require higher specification in materials to enhance corrosion resistance, and that these increase build costs. We would suggest an appropriate uplift is needed in building costs within viability models to accurately reflect the location.	No	The BCIS build costs assumed in the baseline appraisals are rebased to Hastings using the most recent sample. As such, it is expected that any particular specifications required to mitigate coastal conditions in Hastings are implicit within the build cost data.
12.	Developer's Profit	Sea Change Sussex 31/07/2026	Finance rates and developers' returns need to be adjusted upwards. Market conditions have moved to a point where finance rates and the returns sought need to	No	We note the comments received. Please refer to our earlier response regarding finance rates (REF 2). We have conducted sensitivity testing for all appraisal outcomes, assessing the impact of

REF	Item	Consultee & Date	Comment / Feedback / Relevant Extract	Evidence / Supporting Information Submitted?	AV Comments
			be higher to compete with alternative investments outside of the property market. Hastings remains a high-risk development market with limited activity in recent years, and values that have not recovered since the pandemic. Developers and their funders are likely to require higher returns to invest in development within the area. We would therefore suggest that a 20% profit on cost would be more reflective of the market over the plan period.		varying the profit-on-cost assumption from 15% to 20%.
13.	Typologies and net-to-gross adjustments	Sea Change Sussex 31/07/2026	We noted that rents have been split into small and large units. We would suggest that consideration should be given to the increased cost of creating units on these scales as individual subdivision on this scale is not reflected within the standard BCIS figures.	No	We have reviewed the comments and can confirm that variances in costs have been adopted subject to size thresholds published on BCIS. Further, net-to-gross adjustments have been made to relevant uses in line with typical expectations. Further details are set out in the report and appraisals.
14.	Floor Areas	Sea Change Sussex 31/07/2026	The information provided does not disclose a net to gross floor area ratio, however we would expect that normal ratios will be applied based	No	Yes- normal ratios are applied in our appraisals.

REF	Item	Consultee & Date	Comment / Feedback / Relevant Extract	Evidence / Supporting Information Submitted?	AV Comments
			upon the market when typologies are further developed.		
15.	Commercial Yields	Sea Change Sussex 31/07/2026	As we expressed during the workshop, the yields suggested for offices are far sharper than we have seen in reflected in recent property transactions for office space within the town centre including for modern premises in good locations. We would suggest on this basis that an appropriate yield for offices would be in the region of 12% allowing for some market recovery over the plan period to reach this level.	Yes – evidence of 2 achieved sales transactions that have NIY yields (9.51% and 12.18%).	We have reviewed the submission against the data collected in our market report and remain content that they are reasonable. The assumptions are informed by a mix of new-build completed sales data, asking price data and also second-hand transactions, with the greatest weight given to achieved sales. Asking data is reviewed for the purpose of looking at supply levels with regard given to the RICS hierarchy of comparable evidence when forming our value assumptions.
16.	Commercial Rent	Sea Change Sussex 31/07/2026	We consider the rents set out for small offices unrealistic, as there are a number of recently refurbished and recent build small offices that achieve below well below £20 Per Sqft. As such we would suggest that assuming flexible letting terms a rent of £16 would be achievable on a new build for small offices but no higher.	Yes – asking prices for 4no. units.	We have reviewed the assumption against the data collected in our market report and have adjusted the rents to £18 psf on smaller offices and £16 psf on medium offices. The assumptions are informed by a mix of new-build completed sales data, asking price data and also second-hand transactions, with the greatest weight given to achieved sales. Asking data is reviewed for the purpose of looking at supply levels with regard given to the RICS hierarchy of comparable evidence when forming our value assumptions.

1 Introduction

1.1 AspinallVerdi have been reappointed by Hastings Borough Council to update the Local Plan Viability Study (LPVS) in support of the emerging Local Plan. The study was originally commissioned in 2020 and has been through various iterations as emerging policy requirements have been refined and consultations have been completed, resulting in a draft version of the assessment being submitted to the Council in Summer 2024. Given the time which has since passed, we have sought to update the market research used to inform the value assumptions adopted in the viability testing. This report therefore seeks to review the latest available data, focussing on evidence which has become available since the 2024 draft study.

1.2 This market report draws upon the latest published data to ensure the value assumptions are reflective of current market conditions. We have obtained data from recognised sources, including the Land Registry, Rightmove, Zoopla, Energy Performance Certificates (EPC) and market commentaries/forecasts. In line with the previous market report, we have considered the following residential sectors:

- **Private Residential Sales Market** - an assessment of new build achieved and asking price data across the Borough in the period which followed the previous assessment.
- **Private Residential Rental Market** – an assessment of the private rental market using available price data, market commentaries and forecasts. This will include an analysis of the build-to-rent (BTR) sector.
- **Specialist Residential Accommodation (Older Persons)** – an assessment of retirement living and extra care sectors through analysis of market evidence.

1.3 For each sector, we begin by providing a brief overview of the national and regional trends before reviewing the transactional and listing data across the Borough. We then provide a summary of the value assumptions proposed for testing within the updated assessment.

2 Private Residential Sales Market

2.1 This section considers the private residential sales market in Hastings.

Market Overview

2.2 The RICS publishes a regular UK Residential Property Market Survey, which provides an opinion of the direction that the residential market is taking, along with commentary from surveyors from individual regions throughout the UK. The latest survey was published in June 2026, providing the following headlines:

- Measures of buyer demand and newly agreed sales are still negative, albeit marginally less so than before;
- Headline house price indicator largely stable in recent months, although this remains consistent with a modest degree of downward pressure; and,
- Near-term sales expectations turn somewhat less negative, but are yet to signal a genuine turnaround.[1]

2.3 The survey points to tentative signs of improvement, despite the recent easing in global geopolitical tensions and the associated unwinding in oil prices. Overall, activity indicators remain subdued, although the pace of deterioration appears to be moderating.[2]

2.4 At the headline level, the net balance of new buyer enquiries dropped to -29%, which was down from -34% recorded in the previous two versions of the survey. Indeed, this month's figure represents the least downbeat result since February, though it still indicates relatively weak buyer demand.[3]

2.5 With respect to agreed sales, this measure also turned marginally less negative, posting a net balance of -32% compared with -35% in the previous survey iteration. Nevertheless, the latest reading remains indicative of subdued market momentum.[4]

2.6 Looking ahead, near-term sales expectations registered a net balance of -16%, improving from a recent low of -34% in March. As such, respondents appear to anticipate a moderation of recent weakness rather than an outright turnaround in market conditions over the next three months.[5]

2.7 For house prices, the latest aggregate net balance came in at -33%, broadly in line with the readings of -35% and -34% recorded in April and May, respectively. As such, while the indicator continues to point to modest downward pressure on prices at the national level, the trend appears to be stabilising rather than deteriorating further.[6]

2.8 At the regional level, the South East and South West of England continue to exhibit noticeably more negative net balances than the UK average.[7]

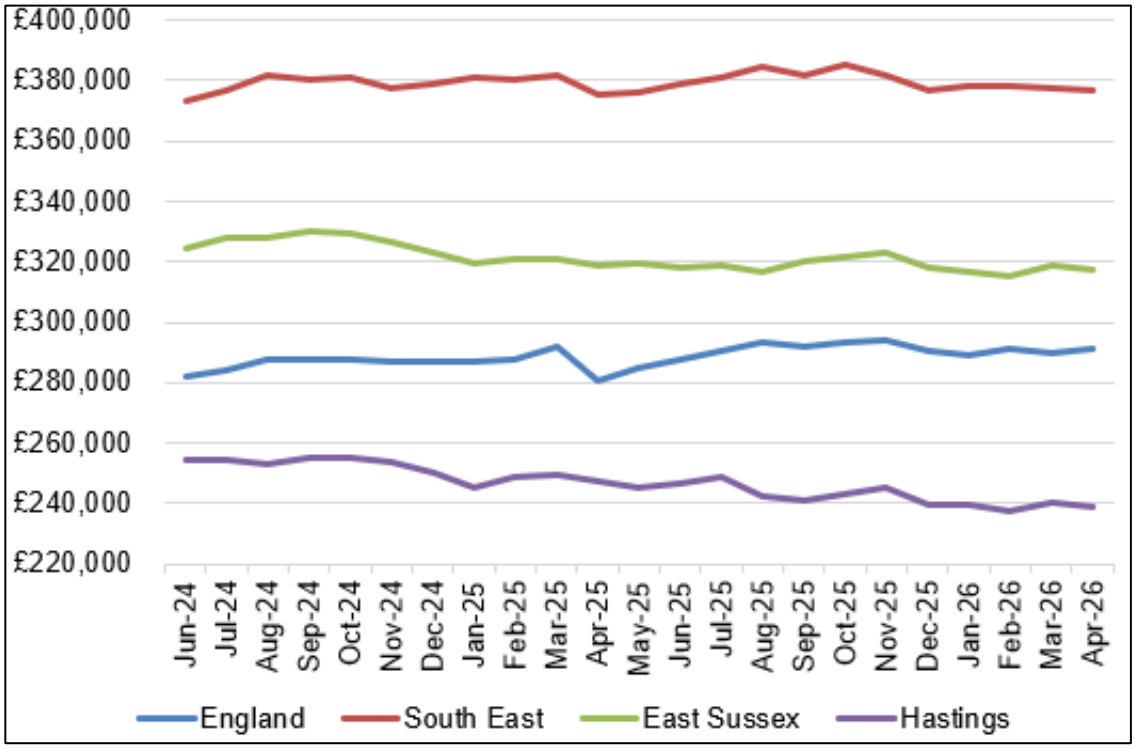
2.9 Figure 2.1 shows the average prices for all property types in England, the South East, East Sussex and Hastings between June 2024 and April 2026 (the latter being the latest available date as per HM Land Registry).

Figure 2.1 - Average All Property Prices



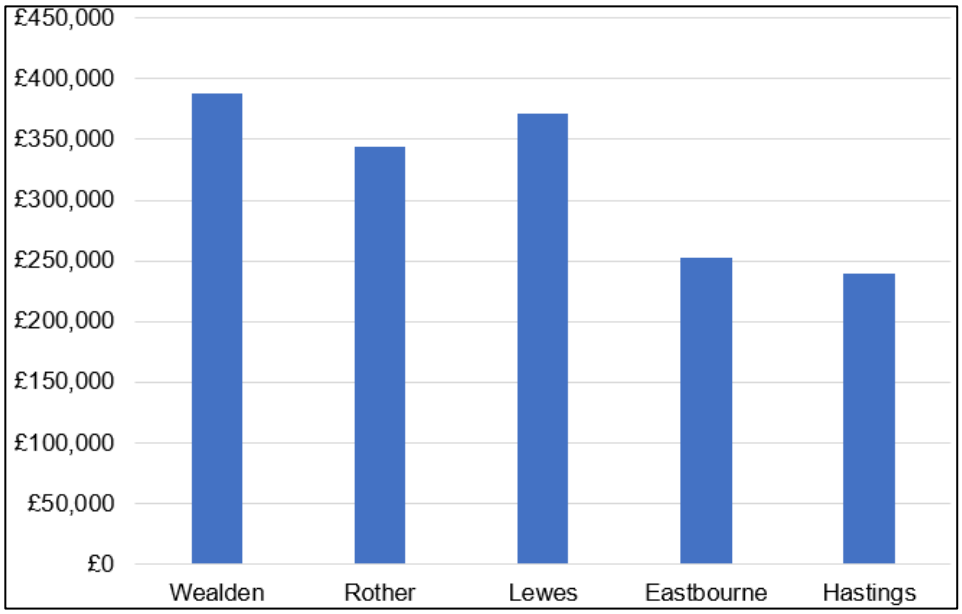
Source: Land Registry, 2026.

2.10 Average property prices in Hastings have decreased by 6.0% between June 2024 and April 2026. Over the same period, the national and regional averages increased by 3.0% and 1.0% respectively. At county level, average prices in East Sussex decreased by 2.0%.

2.11 As of April 2026, the average property price in Hastings was £238,912, which is 33% lower than the average price in East Sussex (£317,415) and 58% lower than the average price recorded across the South East (£379,819). At a national level, the average property price in England (£291,445) was 22% higher than the average price recorded in Hastings.

2.12 Figure 2.2 summarises the average property price (all property types) by district and borough across East Sussex, as of April 2026.

Figure 2.2 - Average Property Price by Local Authority

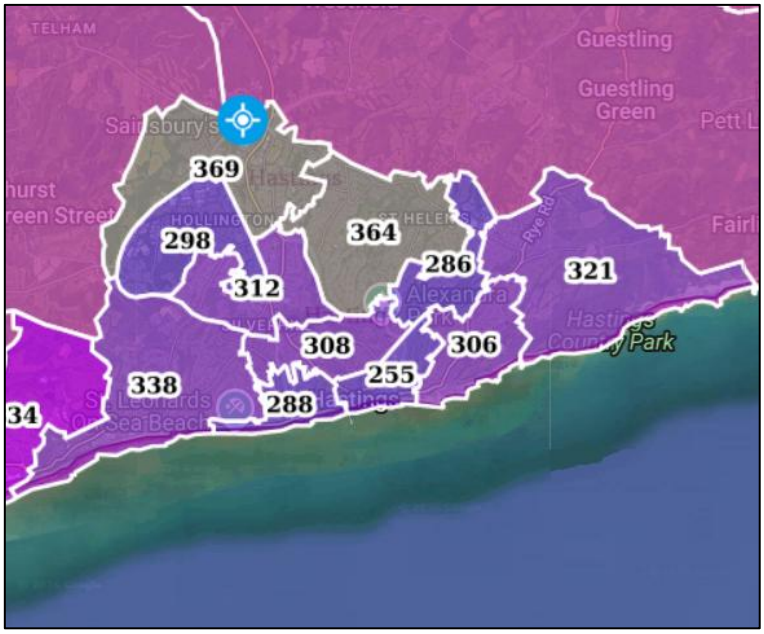


Source: Land Registry, April 2026.

2.13 As per the latest available HM Land Registry price data, Hastings is understood to have the lowest average property value in East Sussex. Coupled with the data demonstrated in Figure 2.1, this suggests that property values across Hastings Borough have been lower when considered at county, regional and national level.

2.14 In addition to the above, we have used OS mapping software to inform our analysis of residential values in Hastings. Figure 2.3 shows a property value heatmap which covers Hastings Borough. The map displays average residential values on a £ / psf basis.

Figure 2.3 – Hastings Borough Value Heatmap



Source: Nimbus, 2026.

2.15 Average property values across Hastings were found to range from £255 to £369 psf (£2,745 psm to £3,972 psm). Higher values are generally observed towards the north and north east of the Borough, with values in the late £200s / early £300s psf observed elsewhere. This is with the exception of Hastings town centre, which is shown to have the lowest values on a £ / psf basis.

New Build Achieved Values

2.16 Following on from the residential market research undertaken in support of the 2024 draft viability assessment, we have carried out an updated review of new-build achieved sales values within Hastings to identify any additional transactions that have been reported.

2.17 Our analysis is based on a detailed review of HM Land Registry data for new build achieved values, cross-referenced on an address-by-address basis to the floor areas published on the EPC database, to derive the achieved values (£ psm / psf). It should also be noted that the Land Registry data for new build achieved values contains a 'PPD Category Type' which sorts the data into one of two categories – A & B, as is defined on the gov.uk website:

> "*A = Standard Price Paid entry, includes single residential property sold for full market value.*
>
> *B = Additional Price Paid entry including transfers under a power of sale/repossessions, buy-to-lets (where they can be identified by a Mortgage) and transfers to non-private individuals.*"[8]

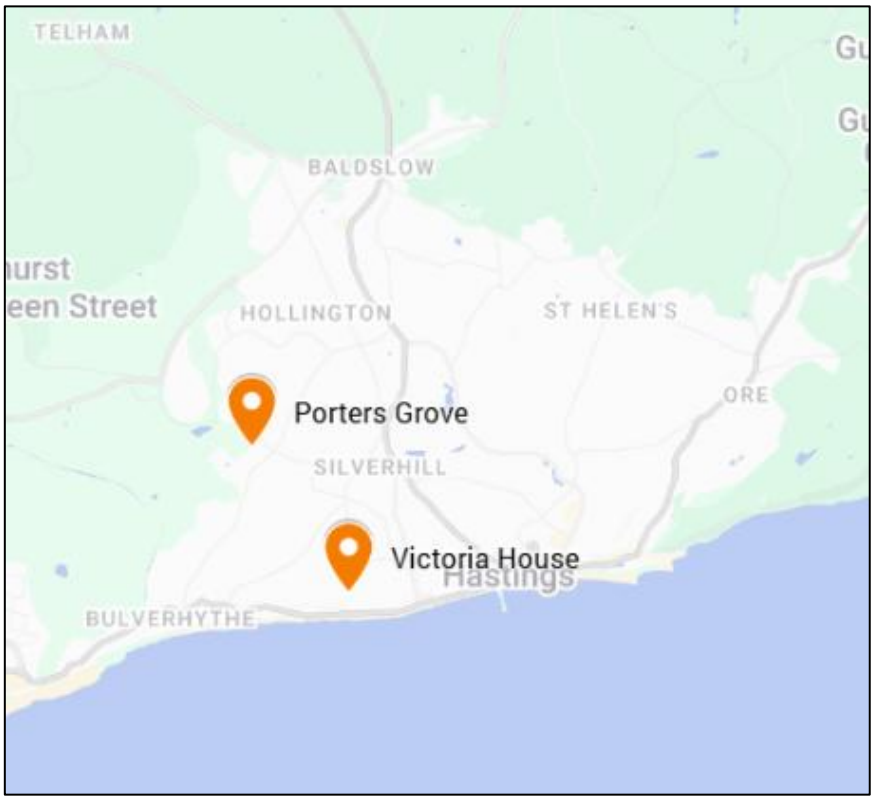
2.18 For the purposes of this research, we have excluded new build achieved data that falls under Category B as the transactions consistently presented discounted transfer values to those provided under Category A, therefore not providing a reflection of the true market value.

2.19 We note that Land Registry price paid data includes the value of garages where these are sold as part of the house. However, the database does not specify whether a house type includes a garage. The value of garages is therefore implicit in the achieved values below, and we have been mindful of this in our assessment of market data.

2.20 We have reviewed the available data (all house types, including flats) between the aforementioned time period on a price per square metre (£ psm) basis. This allows us to identify high- and low-value areas across the Borough. Our search has identified 47no. new build transactions that have completed since summer 2024 across two separate schemes. We summarise the locations of the new build transactions identified in Figure 2.4. Please note that the coloured pins relate to development schemes, rather than individual units or transactions.

[8] Price Paid Data Guidance, 14th August 2014 (https://www.gov.uk/guidance/about-the-price-paid-data)

Figure 2.4 – New Build Scheme Locations



Source: Google MyMaps, 2026.

2.21 Table 2.1 summarises the average achieved values by each property type and ward. The cells marked '-' represent locations where no new build property transactions were identified (within the chosen timeframe).

Table 2.1 – Average New Build Achieved Values (£)

	Property Type			
Electoral Ward	**Flat**	**Terraced**	**Semi**	**Detached**
West St. Leonards	-	£309,773	£356,679	£450,551
Maze Hill	£326,833	-	-	-

Source: Land Registry, 2026.

2.22 The new-build transactions are notably higher than the average recorded in Hastings by HM Land Registry. This is in line with typical expectations, in that new-build stock tends to achieve a premium on resale / second hand values. We are unable to determine if there is significant variation in values across different wards, given the relatively confined sample and differences in property types. Table 2.2 summarises the average values on £ / psm basis by property type and electoral ward.

Table 2.2 - Average New Build Achieved Values (£ psm)

	Property Type			
Electoral Ward	**Flat**	**Terraced**	**Semi**	**Detached**
West St. Leonards	-	£4,425	£4,117	£3,896
Maze Hill	£4,714	-	-	-

Source: Land Registry, 2026.

2.23 In line with expectations, the smaller typologies have achieved a higher rate on a £ / psm basis. This demonstrates the common inverse relationship between size and £ / psm values, with smaller units typically achieving a premium on larger dwellings. Overall, the data has shown that sales of new-build housing in Hastings has achieved between c. £3,900 - £4,800 psm, on average.

2.24 As above, we identified a limited number of new-build transactions within our search. These sales were concentrated across only two wards. The achieved data identified at each scheme is summarised in more detail below:

Porters Grove - Bellway

2.25 Our search revealed 44no. new build transactions from Porters Grove, which were completed from June 2024 to July 2025. Porters Grove is located in the ward of West St. Leonards.

Table 2.3 – Porters Grove Achieved Values

Property Type		**No. of Units**	**Price Range**	**Size Range (sqm)**	**Avg. Price (£ psm)**
Terraced	2-Bed	9	£299,995 - £319,995	70	£4,425
Semi	3-Bed	15	£346,995 - £360,995	84 - 87	£4,137
	4-Bed	3	£374,995 - £392,995	97	£3,962
Detached	4-Bed	17	£410,000 - £509,995	97 - 138	£3,883
Total	**-**	**44**	**£299,995 – £509,995**	**70 - 138**	**£4,086**

Source: Land Registry, 2026.

2.26 As per Table 2.3, achieved values at Porters Grove were found to range from £299,995 to £509,995, with an average of £4,086 psm across the sample. We understand that all of the properties benefit from a garage or allocated parking.

Victoria House – Gemselect

2.27 Our search revealed 3no. new build transactions from Victoria House, which were completed from June 2024 to May 2025, as displayed in Table 2.4.

Table 2.4 – Victoria House Achieved Values

Property Type		No. of Units	Price Range	Size Range (sqm)	Avg. Price (£ psm)
Flat	1-Bed	1	£288,000	61	£4,721
	2-Bed	2	£335,000 - £357,500	72 - 75	£4,714
Total	**-**	**3**	**£288,000 - £357,500**	**61 - 75**	**£4,714**

Source: Land Registry, 2026.

2.28 As per Table 2.4, achieved flatted property values at Victoria House were found to range from £288,000 to £357,500, with an average of £4,714 psm across the sample.

New Build Achieved Values Summary

2.29 In summary, our analysis of new build housing in Hastings demonstrates a market landscape and demand which is weighted towards housing, rather than flats / maisonettes. Similar observations were made in our previous market research, which showed that data for new-build flatted development was scarce.

2.30 Further, new-build values do not appear to have progressed significantly since the time of our last market review. The average values achieved at the Porters Grove scheme are seen to fall within or towards the upper end of the value assumptions (on a £ / psf basis) adopted in our previous report, which is consistent with the House Price Index across the Borough.

New Build Asking Prices

2.31 We have reviewed new build developments which are currently being marketed for sale within Hastings. It should be noted that asking prices can be aspirational and may not reflect the incentives offered by the developer or the actual value a willing purchaser will pay. We have been mindful of this as part of our analysis.

2.32 The RICS Professional Standard on Comparable Evidence in Real Estate Valuation (2019) states that asking prices 'cannot by themselves provide reliable evidence of value and should be treated with caution. They will usually vary from the price achieved on exchange in the open market, but when interpreted with care by an experienced valuer they can provide guidance as to current market sentiment and trends in value.'[9]

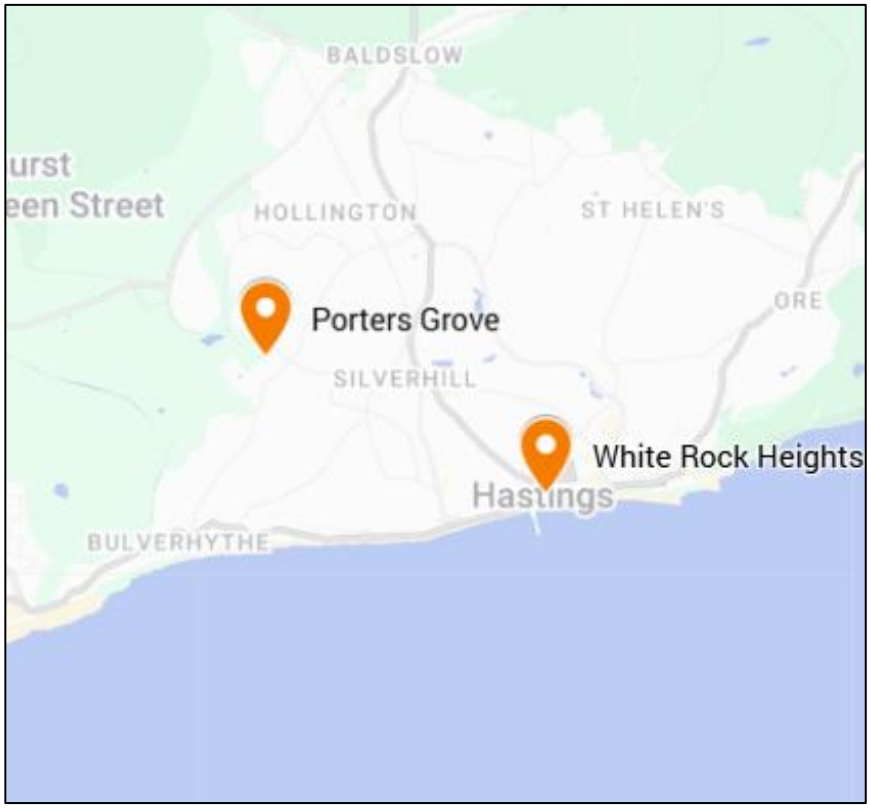
2.33 Thus, whilst the achieved value data in the previous section provides robust evidence, this is retrospective. The asking price analysis in this section provides a review of current prices for new builds. It is important to note that in arriving at our value assumptions for the appraisals, we will have had regard to the new build asking prices, but will place more weight on the transactional data. We have also considered the assumptions for the appraisal 'in the round' (i.e. having regard to the marketing cost assumptions for incentives and discounts).

[9] RICS, 2019. Comparable Evidence in Real Estate Valuation, RICS information paper, 1st edition.

2.34 Finally, it is important to note that the supply ('flow') of new build properties has to be sold within a marketplace that includes an established stock of competing properties. The asking price is therefore tempered by the wider price mechanism.

2.35 We have identified 2no. new build residential schemes currently listed for sale across the Borough, as displayed in Figure 2.5. As with the transactional data, there was limited information available at the time of our research.

Figure 2.5 – New Build Scheme Locations



Source: Google MyMaps, 2026.

2.36 Table 2.5 and Table 2.6 summarise the average new build asking values obtained by ward.

Table 2.5 – Average New Build Asking Values Summary (£)

Ward	Flats	Terraced	Semi	Detached
West St. Leonards	-	£321,663	£349,995	£438,328
Castle	£345,000	-	-	-

Source: Land Registry, 2026.

2.37 The listing prices observed across West St. Leonards are from the Porters Grove development identified in the transactional data review. This shows that the current asking prices are within a reasonable tolerance of the achieved values. The flatted units identified in the Castle ward are shown to be listed for higher prices than those in Maze Hill.

Table 2.6 – Average New Build Asking Values Summary (£ psm)

Ward	Flats	Terraced	Semi	Detached
West St. Leonards	-	£4,270	£4,023	£3,834
Castle	£5,281	-	-	-

Source: Land Registry, 2026.

2.38 On a £ / psm basis, listing prices at the Porters Grove development are shown to have softened, although this may be as a result of larger units coming to market (i.e. in turn, lowering the £ / psm). The flats in the Castle ward are advertised for over £5,200 psm, which is significantly higher than the flatted units which sold in the Maze Hill ward.

Porters Grove - Bellway

2.39 Our search revealed 10no. new build listings from Porters Grove, as displayed in Table 2.7.

Table 2.7 – Porters Grove Asking Values

Property Type		No. of Units	Price Range	Size Range (sqm)	Avg. Price (£ psm)
Terraced	2-Bed	4	£299,995 - £325,000	70	£4,393
	3-Bed	2	£339,995 - £360,000	87	£4,023
Semi	3-Bed	1	£349,995	87	£4,023
Detached	3-Bed	1	£399,995	97	£4,124
	4-Bed	2	£449,995 - £464,995	124	£3,689
Total	**-**	**10**	**£299,995 - £464,995**	**70 - 124**	**£4,114**

Source: Land Registry, 2026.

2.40 As per Table 2.7, asking values at Potters Grove were found to range from £299,995 to £464,995, with an average of £4,114 psm across the sample. This is relatively consistent with the average identified from the achieved transaction sample (£4,086 psm).

White Rock Heights

2.41 Our search revealed 2no. new build listings from White Rock Heights, as displayed in Table 2.8.

Table 2.8 – White Rock Heights Asking Values

Property Type		No. of Units	Price Range	Size Range (sqm)	Avg. Price (£ psm)
Flat	1-Bed	1	£295,000	-	-
	2-Bed	1	£395,000	75	£5,281
Total	**-**	**2**	**£295,000 - £395,000**	**75**	**£5,281**

Source: Land Registry, 2026.

2.42 As per Table 2.8, asking values at White Rock Heights were found to range from £295,000 to £395,000. We note that some of the listings identified within our search did not reveal floorspace details.

New Build Asking Values Summary

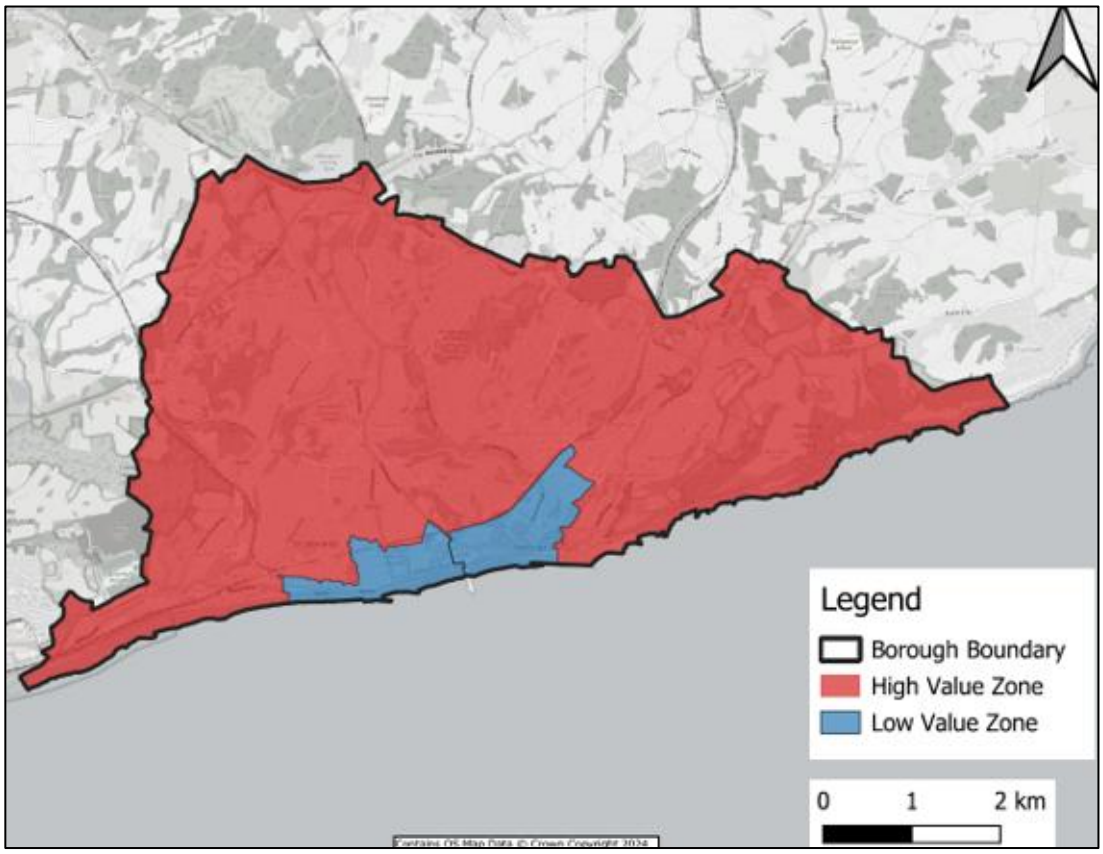
2.43 Current listing data further reinforces the same trend identified within the transactional evidence, with asking values not showing a significant variation when compared to the value assumptions adopted previously.

3 Housing Value Zones & Assumptions

3.1 In this section, we use the market research to determine value zones across the Borough. The purpose is to create a visual representation of the differences in values across the Borough and simplify the Value Zones to adopt for testing. All planning obligations (Affordable Housing, CIL, etc.) should 'align' in terms of Housing Value Zones and viability. We note that this section on Housing Value Zones is about the *relativity* of values across zones in Hastings Borough – not the *absolute* value assumptions that follow.

3.2 For illustrative purposes, Figure 3.1 and Table 3.1 show the value zones that were established in the previous study undertaken in July 2024.

Figure 3.1 – Hastings Borough Value Zones Map (June / July 2024)



Source: AspinallVerdi, 2024.

Table 3.1 – Hastings Borough Wards By Value Zone (July 2024)

Value Zone	Wards
Lower Value Zone	Central St. Leonards and Castle Ward
High Value Zone	West St. Leonards, Maze Hill, Wishing Tree, Hollington, Ashdown, Gensing, Silverhill, Conquest, St. Helens, Braybrooke, Baird, Tressell, Old Hastings and Ore.

Source: AspinallVerdi, 2024.

3.3 In order to derive our updated Housing Market Zones, we have had regard to:

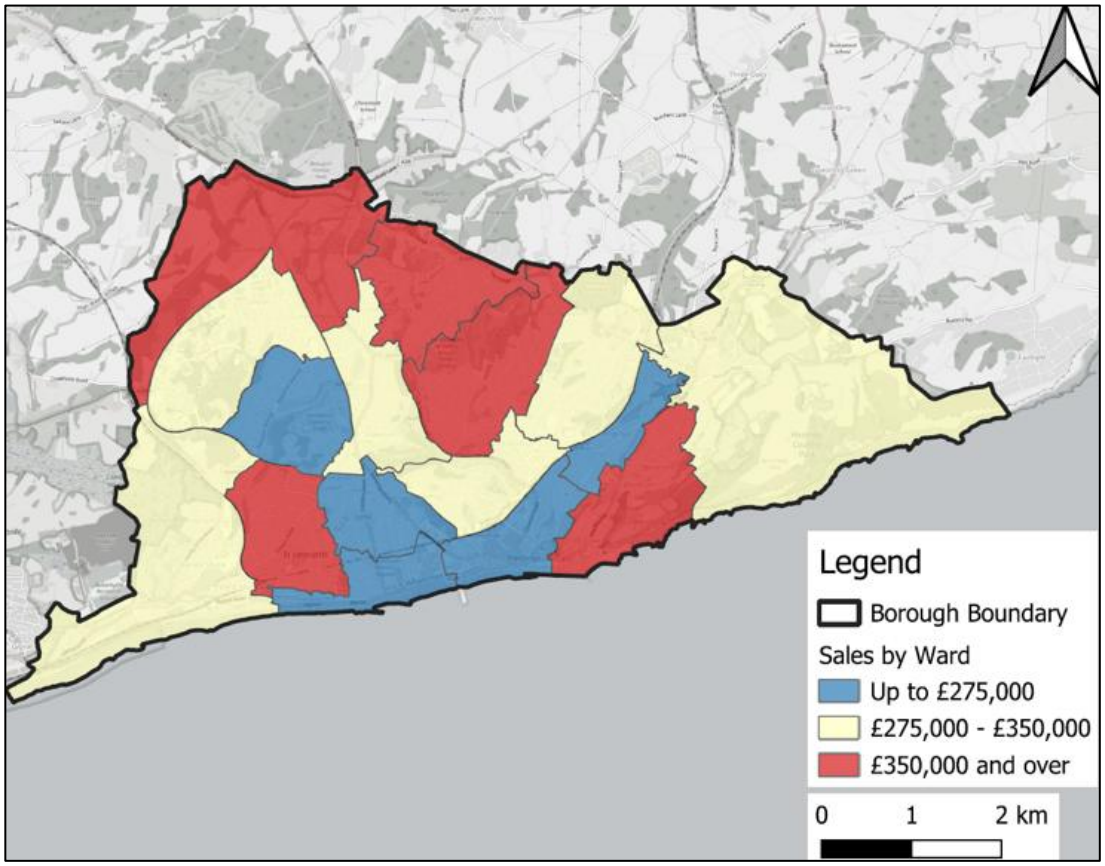
- New build achieved values;
- New build asking prices; and
- Second-hand achieved values (given the geographical concentration of new-build data)

New Build and Second-Hand Achieved Values

3.4 To sense-check the distribution of residential property values across Hastings Borough, we have reviewed the new-build and second-hand housing market between June 2024 and June 2026. Given the lack of new-build data during the sample period, we have included second-hand transactions to substantiate the value trends and ensure there is a sufficient sample size.

3.5 Figure 3.2 shows the average property prices achieved in each ward for all property types across the Borough, as identified in the previous study.

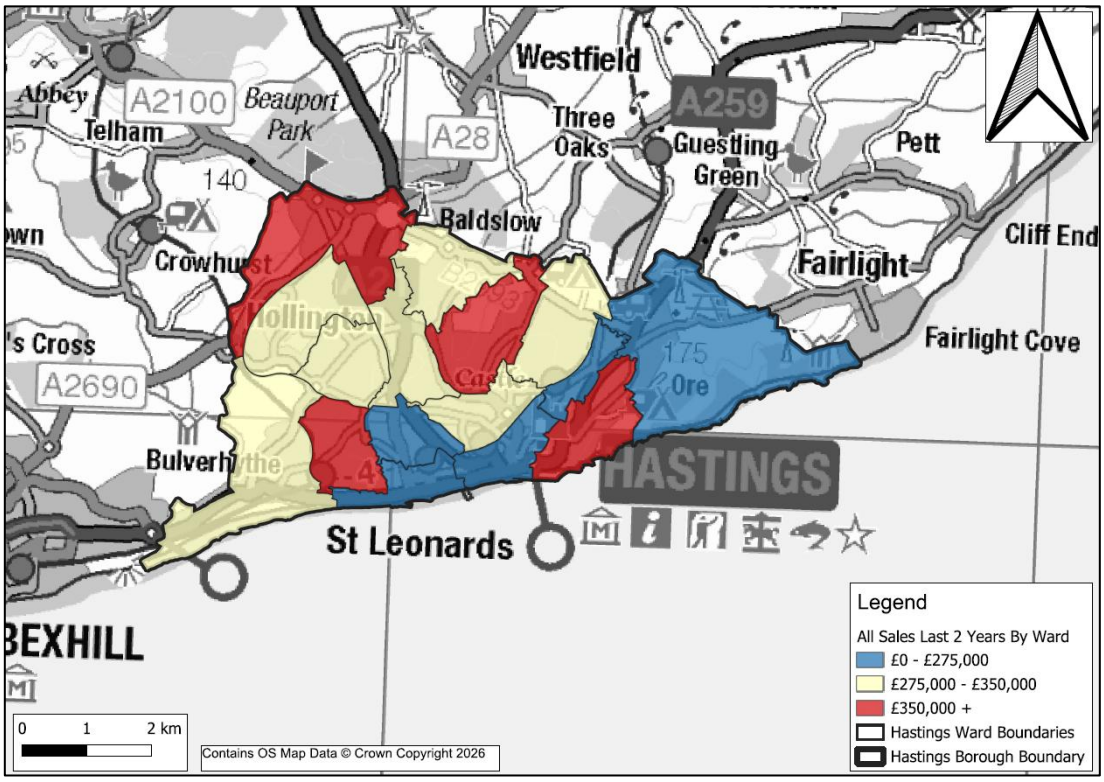
Figure 3.2 - Average Property Prices (June / July 2024)



Source: AspinallVerdi, 2024.

3.6 Figure 3.3 shows the equivalent map (including the same value bandings) but with the updated sales data (i.e. June 2024 – June 2026).

Figure 3.3 - Average All Property Types Prices (July 2026)



Source: AspinallVerdi, 2026.

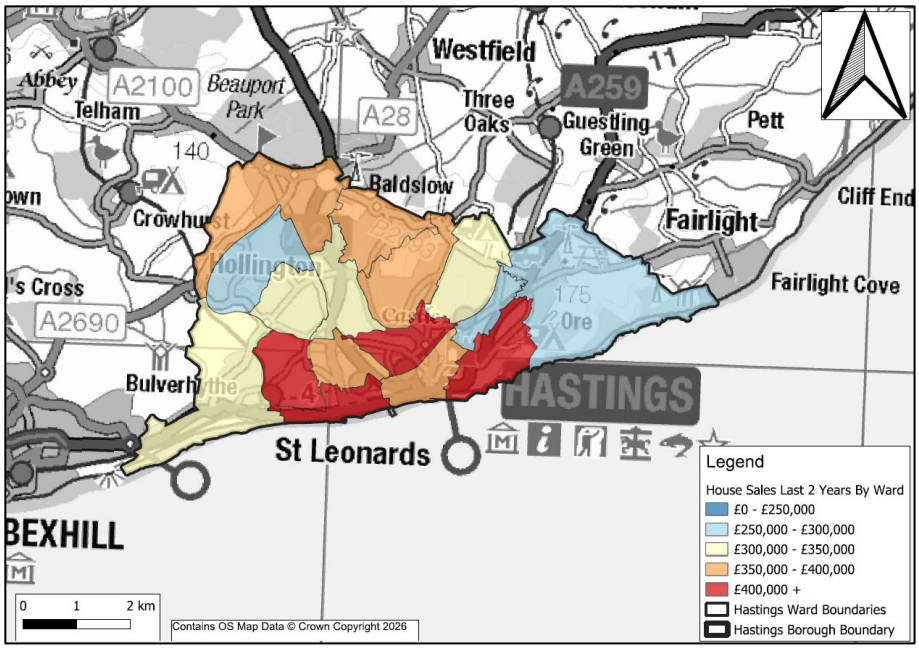
3.7 Figure 3.3 shows that average property values in wards which are located either in or immediately adjacent to Hastings Town Centre are some of the lowest in the Borough. We note that this finding is similar to that which was identified in the previous study. Notwithstanding this, property values towards the south-east corner of the Borough in the ward of Ore have decreased since the previous study, as indicated by the colour change on the heat map.

3.8 High value areas are seen towards the north of the Borough in the ward of Ashdown, as well as to the south in the wards of St. Helens, Maze Hill and Old Hastings. These findings are again similar to those identified in the previous study.

3.9 Whilst we note that this updated assessment does show that average property values across the Borough have shifted in some places since the previous study, we consider that the key conclusions and distribution of values remain largely consistent.

3.10 To provide a more detailed analysis of property prices, we have mapped average new build and second-hand prices for housing only (i.e. detached, semi-detached and terraced, excluding flats) by ward in Figure 3.4.

Figure 3.4 - Average House Price by Ward (June 2024 – June 2026)

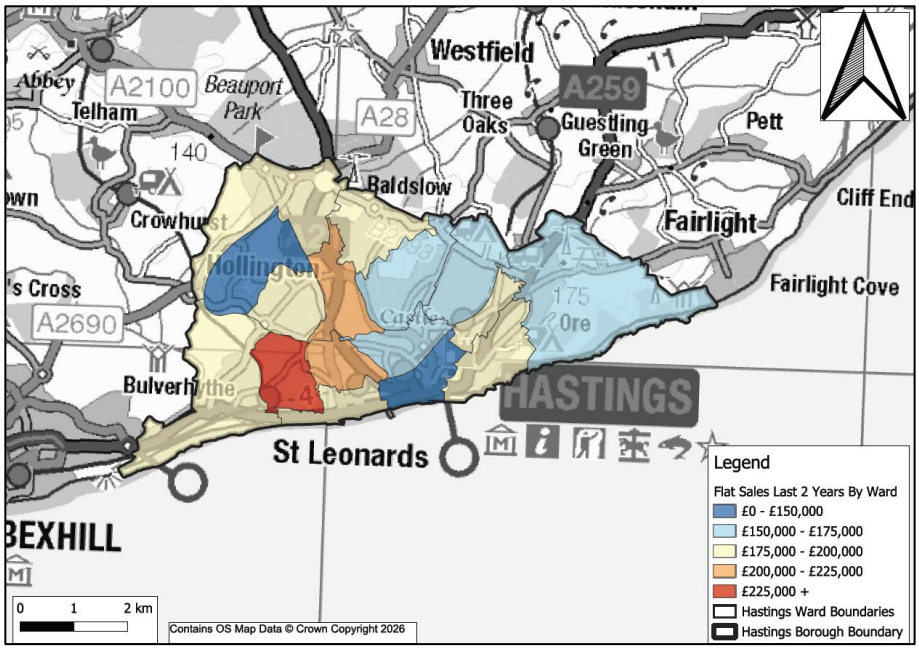


Source: AspinallVerdi, 2026.

3.11 Figure 3.4 shows a broadly similar pattern and distribution to that in Figure 3.3, particularly in relation to house values in the wards of Ore, Maze Hill and Castle. This analysis shows that higher average house prices are seen in wards that are located adjacent to the coast.

3.12 We have also mapped the average price for new-build and second-hand flats by ward, as shown in Figure 3.5.

Figure 3.5 - Average Flat Prices by Ward (June 2024 – June 2026)



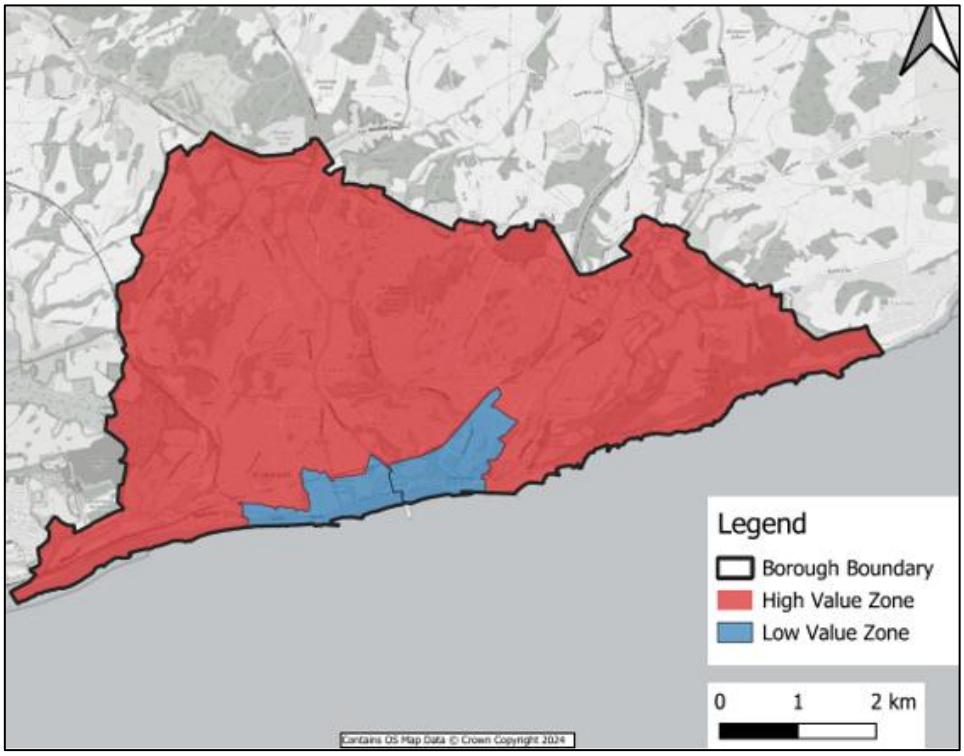
Source: AspinallVerdi, GIS, 2026.

3.13 This analysis shows that average flat values vary across the Borough, with some of the highest values seen in the ward of Maze Hill.

Updated Value Zones

3.14 Figure 3.6 shows the value zones adopted in the previous study. This proposed a two value zone approach, with lower values observed in and around Hastings town centre. All other wards were tested using the same value assumptions.

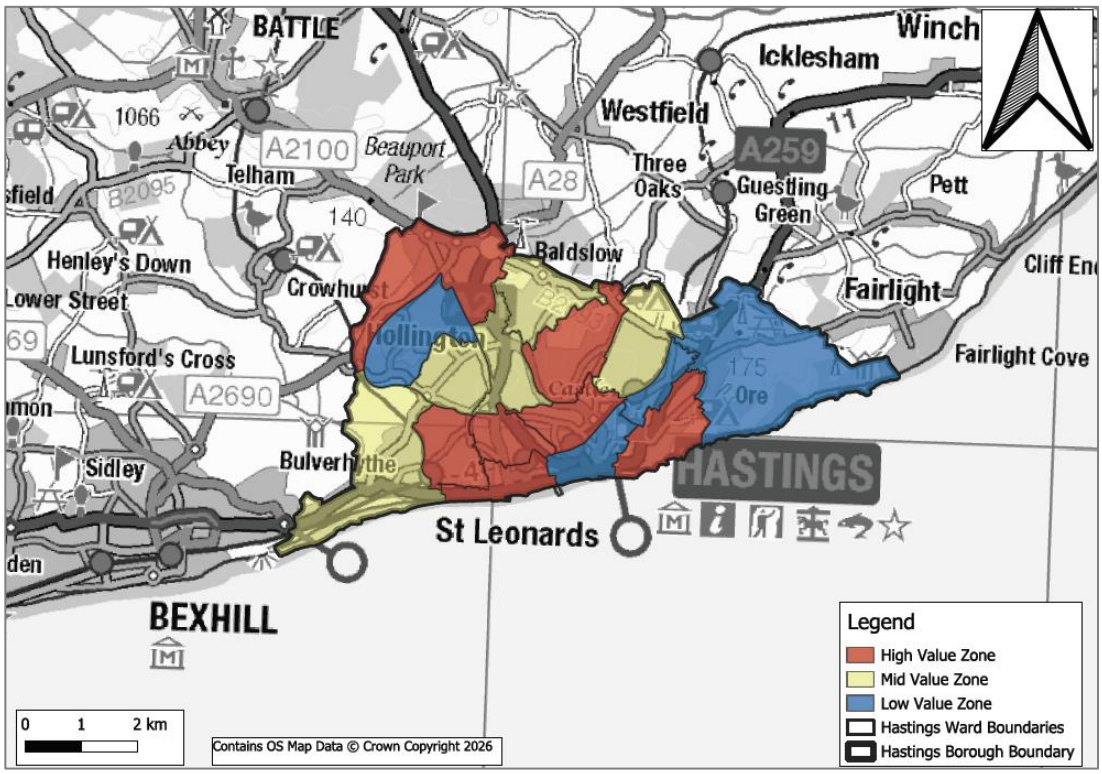
Figure 3.6 - Hastings Borough Value Zone Map (June / July 2024)



Source: AspinallVerdi, 2026.

3.15 Figure 3.7 shows the result of our updated analysis based on the data sourced within this assessment. Our analysis of the data by ward has shown a greater variation in prices which has supported three separate value zones.

Figure 3.7 – Hastings Borough Value Zone Map (July 2026)



Source: AspinallVerdi, GIS, 2026.

Table 3.2 - Wards by Value Zone

Zone	Wards
Lower Value	Hollington, Castle, Tressell and Ore
Mid Value	West St. Leonards, Wishing Tree, Silverhill, Conquest and Baird.
High Value	Old Hastings, St. Helen's, Braybrooke, Gensing, Central St. Leonards, Maze Hill and Ashdown.

Source: AspinallVerdi, 2026.

Residential Value Assumptions

3.16 The table below summarises the residential value assumptions made in the previous study.

Table 10.4 – High Value Zone Assumptions (June / July 2024)

Unit Type	Size (sqm)	Value	Value (£ / psm
1-Bed Flat	50	£210,000	£4,200
2-Bed Flat	68	£260,000	£3,824

Unit Type	Size (sqm)	Value	Value (£ / psm
2-Bed House	75	£320,000	£4,267
3-Bed House	90	£375,000	£4,167
4-Bed House	115	£475,000	£4,130

Source: AspinallVerdi, 2024.

Table 3.3 – Low Value Zone Assumptions (June / July 2024)

Unit Type	Size (sqm)	Value	Value (£ / psm
1-Bed Flat	50	£195,000	£3,900
2-Bed Flat	68	£245,000	£3,603
2-Bed House	75	£300,000	£4,000
3-Bed House	90	£350,000	£3,889
4-Bed House	115	£425,000	£3,696

Source: AspinallVerdi, 2024.

3.17 Having regard to the evidence identified in our updated assessment, including the unit types and sizes delivered across Hastings, we have determined the following assumptions.

Table 3.4 - High Value Zone Assumptions (July 2026)

Unit Type	Size (sqm)	Value	Value (£ / psm
1-Bed Flat	50	£210,000	£4,200
2-Bed Flat	65	£265,000	£4,077
2-Bed House	75	£337,500	£4,500
3-Bed House	90	£372,500	£4,139
4-Bed House	115	£450,000	£3,913

Source: AspinallVerdi, 2026.

Table 3.5 – Mid Value Zone Assumptions (July 2026)

Unit Type	Size (sqm)	Value	Value (£ / psm
1-Bed Flat	50	£200,000	£4,000
2-Bed Flat	65	£255,000	£3,923
2-Bed House	75	£325,000	£4,333
3-Bed House	90	£365,000	£4,056
4-Bed House	115	£440,000	£3,826

Source: AspinallVerdi, 2026.

Table 3.6 - Low Value Zone Assumptions (July 2026)

Unit Type	Size (sqm)	Value	Value (£ / psm
1-Bed Flat	50	£192,500	£3,850
2-Bed Flat	65	£245,000	£3,769
2-Bed House	75	£315,000	£4,200
3-Bed House	90	£350,000	£3,889
4-Bed House	115	£425,000	£3,696

Source: AspinallVerdi, 2026.

3.18 In line with the findings of our market analysis, the values adopted in our updated assessment are not seen to have changed to any significant extent, since the previous assessment was undertaken.

Garage Assumptions

3.19 We have made the following assumptions in respect of garages:

- 3-bed houses - 50% of units
- 4-bed houses - 100% of units

4 Private Residential Rental Market

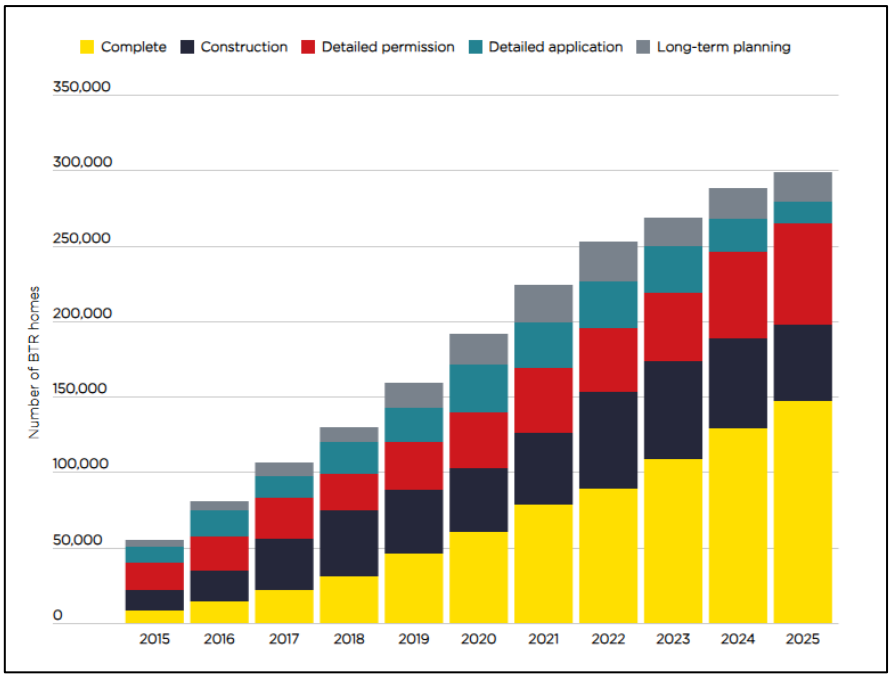
4.1 This section of the paper sets out specific research in respect of the private rental market, which includes build-to-rent (BTR) development.

Market Overview

4.2 The BTR sector in England has seen significant growth in recent years, driven by increasing demand for high-quality rental accommodation and institutional investment. The sector offers purpose-built rental homes with amenities and services often not found in traditional rental properties.

4.3 Figure 4.1 illustrates previous and current BTR stock that is within the planning system, under construction and delivered as of Q4 2025.

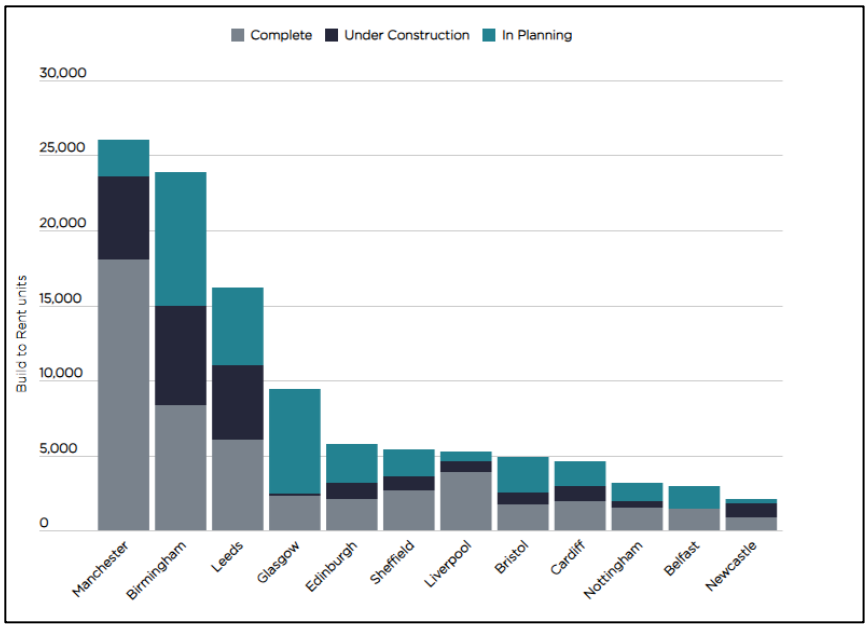
Figure 4.1 - BTR Development Pipeline



Source: Savills UK Build-to-Rent Market Update – Q4 2025, January 2026.

4.4 Figure 4.2 illustrates BTR delivery nationally across all of the core cities, as of Q1 2026.

Figure 4.2 - BTR Delivery Across Core Cities



Source: Savills UK Build to Rent Market Update – Q1 2026, April 2026.

4.5 Several factors are driving growth within the BTR sector, including the increasing number of young professionals and families seeking more flexible and reliable rental options. While the national market is still relatively young compared to other countries, it is experiencing rapid growth and is poised to become a major player in the UK's housing market. As the sector continues to mature, it is expected to offer more choice and flexibility for renters, as well as contribute to the overall housing supply and economic growth in the region.

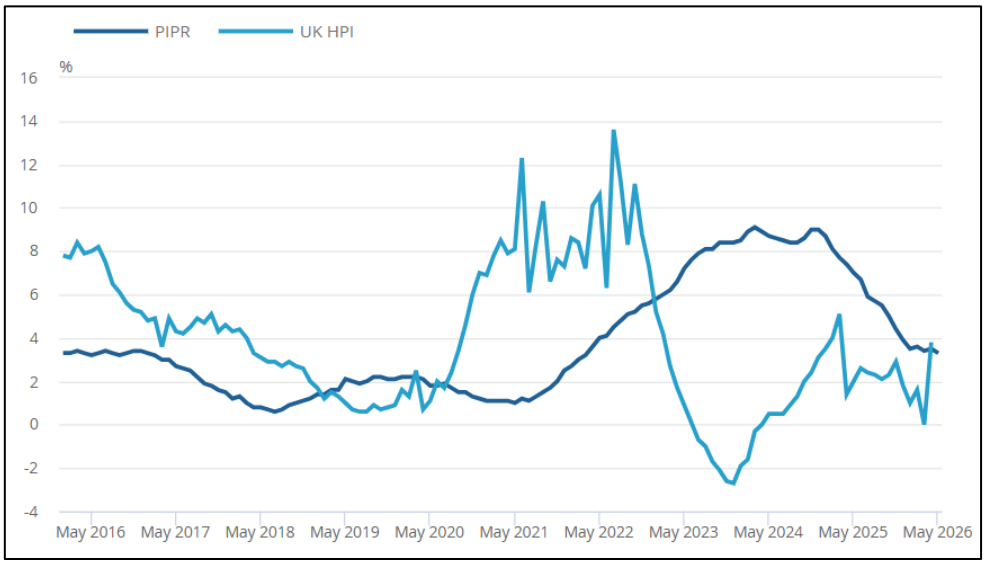
4.6 BTR developments are often forward-funded / forward sold, meaning investors provide capital upfront to fund the development. The landowner / developer will develop proposals for the scheme, often working closely with an investor partner and then will deliver the scheme on a development management basis. Upon completion, the investor purchases the completed development, assuming ownership and long-term rental income. This offers several advantages, including reduced financial risk for the developer, accelerated project timelines, and a more predictable return on investment for the investor, and has become increasingly popular in the UK's BTR sector.

4.7 We note that the Savills Q1 2026 report highlights that the total number of BTR units currently in the pipeline rose to c.108,000 at the end of Q1 2026. This is an increase of 3.0% when compared to the previous year. Despite this, the number of units under construction across the core cities fell by 11% between Q1 2025 and Q1 2026, due to completions outstripping new starts.[10]

4.8 We have also had regard to more general private rental growth trends across the UK, as outlined in Figure 4.3.

[10] Savills, 2026. Savills UK Build to Rent Market Update – Q1 2026.

Figure 4.3 - UK Private Rental Values and House Prices



Source: ONS, 2026.

4.9 Private rents have increased by 3.3% in the 12-months to May 2026. This was down from 3.5% in the 12 months to April 2026, and continues the general trend of slowing UK rent annual inflation since December 2024.

4.10 Table 4.1 shows the latest ONS data available in relation to the average monthly rental prices across Hastings by bedroom number, as of May 2026 (the latest available date as per the ONS).

Table 4.1 – Hastings Average Monthly Rents by Bedroom

Type	Avg. Rent (pcm)
1-Bed	£696
2-Bed	£896
3-Bed	£1,099

Source: ONS, 2026.

New Build Asking Prices

4.11 As the value assumptions will be used to test the viability of new build-to-rent development in Hastings, we have focused our analysis on modern, purpose-built apartment blocks of high specification. We have deliberately excluded any listings considered to provide poor-quality accommodation or those in more rural locations where BTR development is unlikely to be delivered.

4.12 Our search revealed 3no. listings from 1no. scheme, the location of which is displayed in Figure 4.4.

Figure 4.4 – Hastings New-Build PRS / BTR Scheme Location

Source: Google MyMaps, 2026.

Station Plaza – Stace

4.13 Our search revealed 3no. new build apartment listings from Station Plaza, a new-build BTR scheme comprising 103no. studio, one, two and three bedroom apartments which completed in Spring 2025. The development is separated into 3no. apartment blocks ranging from four to seven storeys. The listings identified provide a quality of accommodation that we'd expect to be commensurate with a BTR scheme, with modern kitchens and bathrooms, open-plan living and some featuring private outside space (i.e. balconies and terraces). Residents also benefit from secure underground parking. The current asking prices are shown in Table 4.2.

Table 4.2 - PRS / BTR Asking Values Listings

Property Type		No. of Units	Price Range (pcm)	Size Range (sqm)
Flat	Studio	1	£1,025	41
	1-Bed	1	£1,075	-
	2-Bed	1	£1,095	61
Total/Avg.	**-**	**3**	**£1,025 - £1,095**	**41 - 61**

Source: Land Registry, 2026.

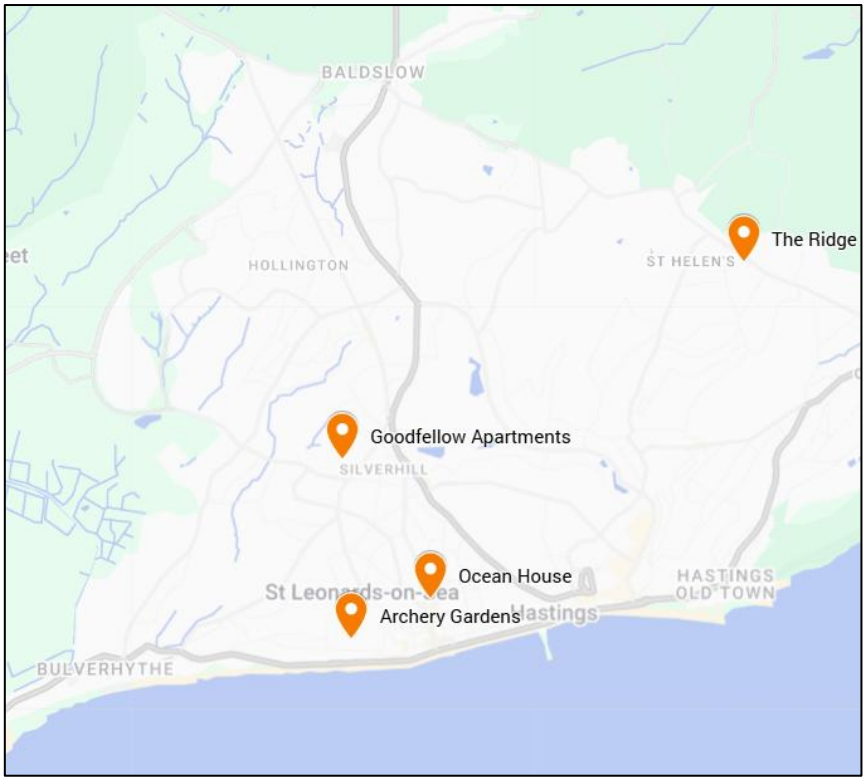
4.14 As per Table 4.2, asking rents at Station Plaza were found to range from £1,025 to £1,095 pcm. This demonstrates a significant premium on the average rental data obtained from the ONS, although it is expected this is as a result of the greater standard and amenities offered at Station Plaza when compared with private rental stock elsewhere across Hastings.

Second-Hand Asking Prices

4.15 Due to the apparent dearth of new-build PRS / BTR evidence, we reviewed asking price data relating to second-hand, purpose-built accommodation located in Hastings.

4.16 Our search revealed 7no. listings from 4no. schemes, the locations of which are displayed in Figure 4.5.

Figure 4.5 - Hastings Second-Hand Purpose-Built Schemes Locations



Source: Google MyMaps, 2026.

Table 4.3 - Second-Hand Purpose-Built Asking Values Listings

Scheme	No. of Units	Type	Price Range (pcm)	Size Range (sqm)
The Ridge, TN34	2	2-Bed	£1,025 - £1,100	57 - 59
Goodfellow Apartments, TN38	2	2-Bed	£1,050 - £1,100	51 - 53

Scheme	No. of Units	Type	Price Range (pcm)	Size Range (sqm)
Archery Gardens, TN38	1	2-Bed	£1,395	-
	1	3-Bed	£1,595	-
Ocean House, TN37	1	2-Bed	£1,195	59
Total	**7**	**-**	**£1,025 - £1,595**	**51 - 59**

Source: Rightmove, 2026.

4.17 As per Table 4.3, asking prices were found to range from £1,025 to £1,595 pcm. We reiterate that the sample identified comprises second-hand apartments and as such the units may not comply with the Nationally Described Space Standards (NDSS).

Investment Yield

4.18 We have assessed investment market data to derive a yield assumption for our BTR typology testing. This represents the expected annual percentage return on the total investment in the asset, derived from the income generated by the proposed development.

4.19 In selecting an appropriate yield, an investor will evaluate a wide range of factors that reflect both the risks and opportunities associated with the development. These factors include achievable rental levels, potential for rental growth, and broader economic conditions such as local employment, income levels and inflation. Additionally, the depth of the market (i.e. the number of potential investors) and the size of the investment play a key role. The maturity of the BTR sector in the location is also critical to the investor's analysis. Therefore, when assessing comparable data, it is important to consider the specific characteristics of an area as a prospect for BTR development and investment.

4.20 Another key factor will be the delivery of the scheme, with yields for forward-funded assets typically being softer than stabilised investments (usually between +25 – 50 base points). Given that there are no sites specifically allocated for BTR development within the emerging Local Plan, we have assumed that the typologies tested will be delivered speculatively and disposed of as a stabilised asset on completion.

4.21 To derive a yield assumption, we sought evidence from transactions of completed BTR schemes in Hastings; however, we did not identify any sales occurring within the last 2-years. Due to this, we consulted residential market reports instead, as summarised in Table 4.4.

Table 4.4 - BTR Yield Evidence

Source	Category	Yield
Knight Frank Prime Yield Guide – April 2026	Tier 1 Regional Cities	4.50%
	Tier 2 Regional Cities	4.75% - 5.00%
	Regional – Single Family Housing	4.50% - 4.75%
	South East Prime	4.25% - 4.50%
	South East – Single Family Housing	4.00% - 4.25%

Source	Category	Yield
	Regional – Single Family Housing	4.50% - 4.75%
Cushman & Wakefield Marketbeat Build to Rent – Q1 2026	Prime Regional (March 2026)	4.75%

Source: As referenced.

4.22 We would expect that yields for BTR are likely to sit at the upper end of the range set out in Table 4.4, aligned with regional rates and Tier 2 cities.

Build-to-Rent Value Assumptions

4.23 For illustrative purposes, the table below summarises the BTR assumptions made in the previous study.

Table 4.5 - BTR Value Assumptions (June / July 2024)

Unit Type	Size (sqm)	Rent (pcm)	Yield
1-Bed Flat	50	£1,100	4.75%
2-Bed Flat	70	£1,350	4.75%

Source: AspinallVerdi, 2024.

4.24 Having regard to the asking price evidence identified in our updated assessment, we have calculated potential BTR values, as set out in Table 4.6.

Table 4.6 – BTR Value Assumptions (July 2026)

Unit Type	Size (sqm)	Rent (pcm)	Yield
1-Bed Flat	50	£1,100	5.0%
2-Bed Flat	70	£1,300	5.0%

Source: AspinallVerdi, 2026.

5 Older Persons' Accommodation

5.1 This section of the paper sets out specific research in respect of older persons' (OP) accommodation.

5.2 The Older and Disabled People PPG[11] sets out definitions for the different types of accommodation, as set out below:

> *"**Age-restricted general market housing:** This type of housing is generally for people aged 55 and over and the active elderly. It may include some shared amenities such as communal gardens, but does not include support or care services.*
>
> ***Retirement living or sheltered housing:** This usually consists of purpose-built flats or bungalows with limited communal facilities such as a lounge, laundry room and guest room. It does not generally provide care services, but provides some support to enable residents to live independently. This can include 24-hour on-site assistance (alarm) and a warden or house manager.*
>
> ***Extra care housing or housing-with-care:** This usually consists of purpose-built or adapted flats or bungalows with a medium to high level of care available if required, through an on-site care agency registered with the Care Quality Commission (CQC). Residents can live independently with 24-hour access to support services and staff, and meals are also available. There are often extensive communal areas, such as space to socialise or a wellbeing centre. In some cases, these developments are known as retirement communities or villages - the intention is for residents to benefit from varying levels of care as time progresses.*
>
> ***Residential care homes and nursing homes**: These have individual rooms within a residential building and provide a high level of care, meeting all activities of daily living. They do not usually include support services for independent living. This type of housing can also include dementia care homes."*

5.3 The key factors distinguishing these development types relate to the level and intensity of care, residential independence and provision of communal space / amenities. At the lower end of the intervention scale, the distinction between 'age-restricted' and 'retirement living' hinges on the introduction of support, such as warden or alarm systems. Extra Care then retains self-contained living but with the addition of mandatory care services (typically registered with the Care Quality Commission (CQC)) and communal infrastructure, such as on-site catering and wellness suites. Finally, at the upper end of the intervention scale, residential care shifts from self-contained units to individual rooms within an institutional framework, where the primary purpose is the delivery of high-level personal care rather than private habitation. This can also include specialist nursing or dementia care.

5.4 The Housing Learning and Improvement Network (Housing LIN) have recognised that, with the emergence of modern OP housing developments, various new terms have also come into use to describe housing for older people, including independent living, retirement villages and assisted / supported living. This has, in turn, created difficulty in establishing whether such housing should fall within Use Class C2 or C3, as defined in the Town and Country Planning (Use Classes) Order 1987 (as amended):

[11] MHCLG, 26 June 2019, PPG, Paragraph: 010 Reference ID: 63-010-20190626

- **C2** - *Use for the provision of residential accommodation and care to people in need of care (other than a use within [F2class C3 (dwelling houses)] [F2Class C3. Dwellinghouses, used as sole or main residences]).*

  Use as a hospital or nursing home.

  Use as a residential school, college or training centre.

- **C3** - Use as a dwellinghouse (whether or not as a sole or main residence) by—

  (a) a single person or by people to be regarded as forming a single household;

  (b) not more than six residents living together as a single household where care is provided for residents; or

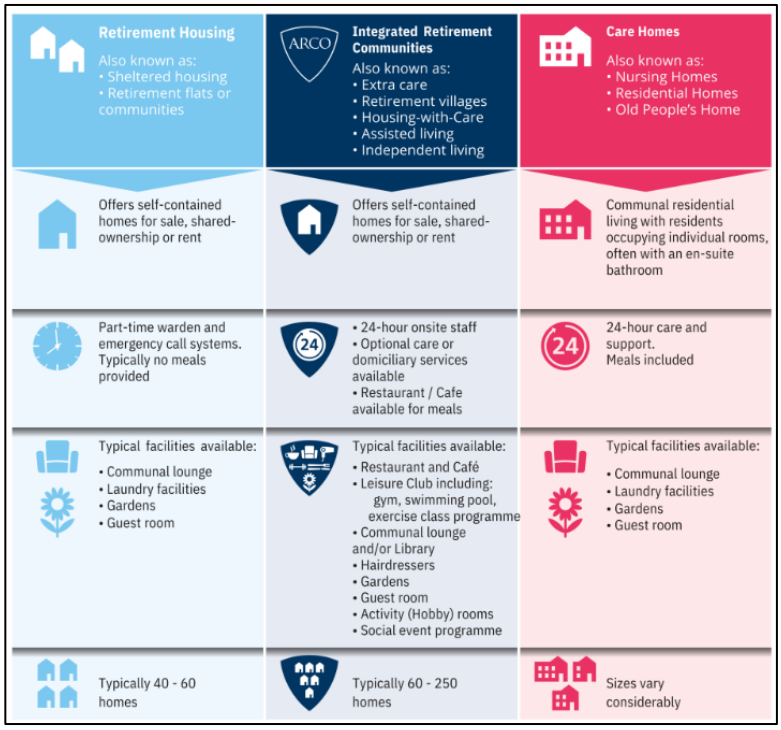
  (c) not more than six residents living together as a single household where no care is provided to residents (other than a use within Class C4).

5.5 The Housing LIN research indicates that the classification of development into a specific use class depends on several factors, including:

- The extent of care services provided;
- The level of dependency of residents;
- How the development is delivered (types and tenures); and,
- The degree of shared facilities and services on-site.

5.6 This distinction between facilities is demonstrated in Figure 5.1, produced by the Associated Retirement Community Operators (ARCO). ARCO is the main body representing the UK's Integrated Retirement Community sector, setting high standards for quality and transparency through its Consumer Code.

Figure 5.1 – ARCO OP Housing Types



Source: ARCO.

5.7 The emergence of schemes that provide self-contained homes with institutional-level care has created further ambiguity in planning terms. This is particularly evident on mixed-use sites that combine C3 and C2 uses, where the lines between residential and institutional functions are less defined. This is compounded by the lack of specific national policy or guidance to assist decision makers on how to interpret and designate the use classes of OP housing.

5.8 The distinction is important in the context of the viability assessment, as previously, C2 residential institutions have often been considered exempt from providing affordable housing contributions. However, as part of the plan-making process, some authorities have sought to apply affordable housing requirements to all housing functions, regardless of whether it is designated as C2 or C3. This creates viability constraints, as the different types of accommodation carry different economic characteristics (i.e. variable cost and value inputs).

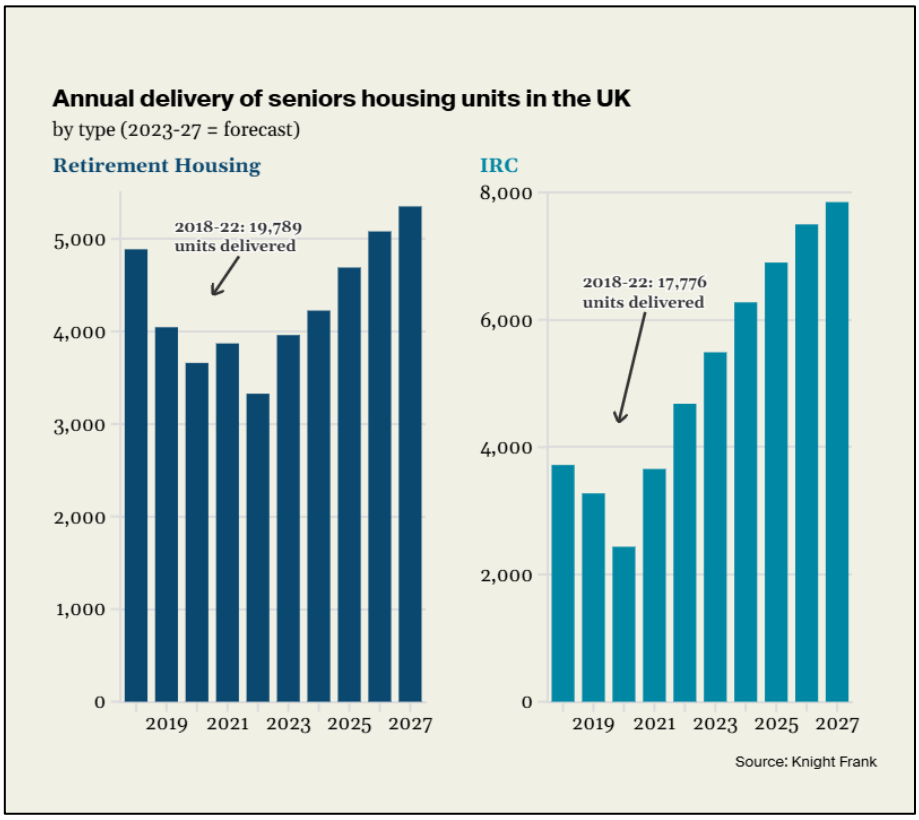
5.9 The NPPF states that plans should set out contributions expected from development, including affordable housing, and that these policies should not undermine the deliverability of the plan. Where affordable housing need is identified, policies should specify the type required and expectations as to whether this is met on-site or via off-site financial contributions. In this respect, we have sought to test two different OP housing typologies designed to cover the range of product types.

Market Overview

5.10 With an ageing population, the demand for forms of specialist accommodation for the elderly is growing nationally. This type of specialist accommodation usually takes the form of retirement living (typically over-55 accommodation), housing with support, and housing with care.

5.11 Figure 5.2 shows the actual and forecasted annual delivery of older persons' housing in the UK from 2018 to 2027. Supply is forecasted to increase over the coming years, owing to the country’s ageing population and longer life expectancy. There is also increasing wealth and income amongst senior age cohorts, leading to more informed housing and lifestyle choices within the sector. For this reason, age-restricted accommodation is expected to grow over the next decade.

Figure 5.2 - Retirement Living Supply



Source: Knight Frank, 2023.

5.12 CBRE's 2025 UK Senior Living Survey, published in January 2026, reports the following key trends in relation to Older Persons Living:

- A shift towards needs-driven choices; and,
- The importance of affordability and cost certainty.

5.13 CBRE report that consumer sentiment is increasingly moving toward practical considerations. Health, ease of management, security and overall wellbeing now dominate the decision-making process. While premium offerings will continue to appeal to some consumers, most are signalling a willingness to trade bespoke, high-end amenities for affordability and functionality. The sector could benefit from building more affordable mid-market developments targeting a larger group at scale.[12]

5.14 CBRE also report that the demand for senior living options remains strong; however, concerns about ongoing costs continue to affect consumer confidence. Financial security and predictable expenses are key priorities, particularly among individuals under 75.[13]

5.15 Moving into 2026, the supply of older persons' accommodation in the UK lags behind its international counterparts. Data from the ONS confirms that approximately 0.6% of all over-65s currently live in dedicated retirement communities in the UK. It is estimated that the UK requires the delivery of 30,000 to 50,000 Later Living homes per

[12] CBRE, 2026. 2025 UK Senior Living Survey, 2026.
[13] Ibid

annum to meet demand, yet the industry is currently managing to add only around 7,000 each year.[14]

5.16 In the investment market, for investors wanting to focus on premium products, the Later Living market is undersupplied, capital-rich, willing to pay a premium for amenity and service, and forecasted to grow over the next decade. Hence, Older Persons living could provide the next destination for institutional investment in our sector.[15]

New Build Achieved Prices

5.17 We have sought data on the sales of units from older persons schemes across Hastings and the surrounding areas since our previous market research. Unfortunately, we did not identify any new build transactions occurring since June 2024.

New Build Asking Prices

5.18 Due to the lack of new-build achieved data, we have undertaken an analysis of asking prices for new-build retirement living units in Hastings. Similarly, there was no information available for new-build facilities across Hastings. Hence, we have widened our search radius to include neighbouring areas. Our search identified nine new build listings from two schemes, as shown in Figure 5.3.

Figure 5.3 - New Build Older Persons Schemes Locations

[15] Ibid

Saxon Lodge – Churchill Living

5.19 Saxon Lodge is a retirement living development in Bexhill-on-Hill delivered by Churchill Living, comprising 35no. one and two-bed apartments. All apartments are self-contained with their own front door and benefit from access to a 24-hour telephone support system, as well as landscaped gardens and a communal lounge.

5.20 The asking price data identified in the scheme is summarised in Table 5.1.

Table 5.1 – Saxon Lodge Asking Values

Unit Type	No. of Units	Price Range	Size Range (sqm)	Avg. Price (£ psm)
1-Bed Flat	1	£342,950	-	-
2-Bed Flat	1	£485,950	-	-
Total	**2**	**£342,950 - £485,950**	**-**	**-**

Source: Rightmove, 2026.

5.21 As per Table 5.1, asking values at Saxon Lodge were found to range from £342,950 to £485,950. We note that none of the listings identified within our search at Saxon Lodge revealed floorspace details.

Harbourside House – McCarthy Stone

5.22 Harbourside House is a new-build retirement living development in Eastbourne delivered by McCarthy Stone, comprising 58no. one and two-bed apartments. Residents benefit from access to a 24-hour telephone support system, as well as landscaped gardens, a communal lounge and a guest suite.

5.23 The asking price data identified at the scheme is summarised in Table 5.2.

Table 5.2 – Harbourside House Asking Values

Unit Type	No. of Units	Price Range	Size Range (sqm)	Avg. Price (£ psm)
1-Bed Flat	2	£257,000 - £285,000	-	-
2-Bed Flat	3	£330,000 - £375,000	-	
Total	**5**	**£257,000 - £375,000**	**-**	**-**

Source: Rightmove, 2026.

5.24 As per Table 5.2, asking values at Harbourside House were found to range from £257,000 to £375,000. We note that none of the listings identified within our search at Harbourside House revealed floorspace details.

Second Hand Older Persons Housing

5.25 Due to the lack of available new build evidence, we have examined second-hand listings for older persons' housing located in Hastings. We have focused our analysis on schemes which appear to have been constructed recently, as these will provide a better indication as to the achievable values of new build older persons development in the study area. Nonetheless, we are conscious that second-hand data is likely to transact or be listed at a discount when compared with new-build OP housing.

Retirement Living / Age-restricted Accommodation

5.26 We provide a summary of the retirement living / age-restricted listings in Table 5.3.

Table 5.3 - Second Hand Retirement Living Listings

Scheme	No. of Units	Type	Price Range	Size Range (sqm)	Avg. Price (£ psm)
Kenrith Court, TN34	3	1-Bed	£100,000 - £115,000	-	-
	2	2-Bed	£125,000 - £200,000	-	-
Waverley Court, TN37	2	1-Bed	£100,000 - £110,000	-	-
	1	2-Bed	£190,000	-	-
Total	**5**	**-**	**£100,000 - £200,000**	**-**	**-**

Source: Land Registry, 2026.

5.27 As per Table 5.3, asking values were found to range from £100,000 to £200,000. We note that none of the listings identified within our search revealed floorspace details.

5.28 We note that the schemes within the sample are older, with all originally constructed over 10+ years ago. In conjunction with a new-build premium, we would expect that the design, specification, range of amenities and associated resident provisions have since progressed and would therefore justify prices towards the upper end or in excess of those demonstrated in the table above.

Older Persons Housing Resales

5.29 To supplement the new-build and second-hand asking value evidence, we have also undertaken a search for the resale asking values of older persons housing.

5.30 We provide a summary of the listings identified in Table 5.4.

Table 5.4 – Retirement Living Resales Listings

Scheme	No. of Units	Type	Price Range	Size Range (sqm)	Avg. Price (£ psm)
Wolsey Place, BN27	1	2-Bed	£309,950	-	-
Weavers House, TN18	1	2-Bed	£488,000	-	-

Scheme	No. of Units	Type	Price Range	Size Range (sqm)	Avg. Price (£ psm)
Horsley Place, TN17	1	2-Bed	£345,000	-	
Oak Tree Court, TN30	1	2-Bed	£399,950	-	-
Total	**4**	**-**	**£309,950 - £488,000**	**-**	**-**

Source: McCarthy Stone, 2026.

5.31 As per Table 5.4, two-bedroom apartment asking values were found to range from £309,950 to £488,000. We note that none of the listings identified within our search revealed floorspace details.

5.32 We consider that the scheme known as Weavers House, Hawkhurst, TN17 was built in 2023 and as such may provide the most reliable indication of two-bedroom new-build retirement living apartment values within the sample.

Older Persons Housing Premiums

5.33 We have considered previous academic evidence to guide our value assumptions for specialist living, to supplement the lack of new-build data. We have referred to representations from the Retirement Housing Group (RHG) to inform the Sheltered and Extra Care unit values adopted in our appraisals.

5.34 Table 5.5 displays the value premium guidance provided by the RHG.

Table 5.5 – Sheltered Housing and ECH Sales Value Premiums

Typology	Assumption
Sheltered Housing Unit Prices	In high-value areas (with a high proportion of flats) - • 10-15% premium to private market 1-and 2-bed flats. • 75% value of a 3-bed semi-detached house for a 1-bed sheltered housing unit; and • 100% value of a 3-bed semi-detached house for a 2-bed sheltered housing unit.
Extra Care Housing Unit Prices	• 25% premium to private market 1-bed flat.

Source: Retirement Housing Group, 2016.

5.35 Table 5.5 shows Extra Care Housing values to carry a premium over Sheltered Housing types. The RHG report states that extra care housing is typically 25% more expensive than sheltered housing.[16]

[16] RHG, 2016. COMMUNITY INFRASTRUCTURE LEVY AND SHELTERED HOUSING/EXTRA CARE DEVELOPMENTS, 2016.

Older Persons Housing Value Assumptions

5.36 We have cross-referenced the potential values against asking price data for similar schemes. We have also had regard to the RHG report in order to sense-check our adopted values.

5.37 Table 5.6 summarises the older persons' housing value assumptions adopted within the previous assessment.

Table 5.6 - Older Persons Housing Value Assumptions (June / July 2024)

Type	Size (sqm)	Value (£)	Value £ / psm
1-Bed	55	£275,000	£5,000
2-Bed	80	£340,000	£4,250

Source: AspinallVerdi, 2024.

5.38 The table below summarises the older persons' housing value assumptions adopted within our updated assessment.

Table 5.7 - Older Persons Housing Value Assumptions (July 2026)

Scenario	Value Zone	Type	Size (sqm)	Value	£ / psm
Sheltered Housing	All Zones	1-Bed Flat	55	£275,000	£5,000
	All Zones	2-Bed Flat	80	£340,000	£4,250
Extra-Care Housing	All Zones	1-Bed Flat	55	£295,000	£5,364
	All Zones	2-Bed Flat	80	£360,000	£4,500

1 Introduction

1.1 AspinallVerdi have been reappointed by Hastings Borough Council to update the Local Plan Viability Study (LPVS) in support of the emerging Local Plan. The study was originally commissioned in 2020 and has been through various iterations as emerging policy requirements have been refined and consultations have been completed, resulting in a draft version of the assessment being submitted in Summer 2024. Owing to the time which has passed, and in support of the latest version of the emerging Local Plan, this report ensures the value assumptions adopted in the viability testing are informed by the latest commercial market data and evidence available. We have specifically focused on evidence which has become available since our draft report

1.2 In support of the latest version of the emerging Local Plan, we have prepared an updated residential commercial market report, which will inform the assumptions adopted within our updated viability testing. We have obtained data from recognised sources including CoStar, property marketing portals (Rightmove, Zoopla) and market commentaries / forecasts.

1.3 For each sector, we begin by providing a brief overview of the national and regional trends before reviewing the transactional and listing data across the Borough. We then provide a summary of the value assumptions proposed for testing within the updated assessment.

2 Retail Market

2.1 This section considers evidence arising from the retail market across Hastings.

Market Overview

2.2 Retail performance in mid-2024 showed early signs of recovery following the economic downturn and period of record-high inflation. Consumer confidence appeared to improve; however, this did not translate into a significant increase in market activity. Consumers continued to cut back on discretionary spending, while retailers faced weakened demand alongside rising operating costs. As a result, several established brands were unable to withstand these pressures, including Homebase, Carpetright, The Body Shop and Lloyds Pharmacy.

2.3 In mid-2024, there was a 4% increase in high street rental growth and a 3.7% rise in shopping centre rental growth when compared against the previous year. Despite these improvements, the second half of the year saw a drop in consumer confidence, driven by the worsening economic outlook.

2.4 Moving into 2025, national retail take-up declined by 42% against the previous 12-months. Specifically, lettings take-up decreased by 36% and occupational sales take-up decreased by 58%. Market analytics provided by EGI showed a significant decline in the number of transactions in 2025 against the previous 12-months; with the number of lettings down by 50% and occupational sales having decreased by 60%.

2.5 The final quarter of 2025 saw the beginning of a cautious recovery in sentiment - the Bank of England implemented a pivot in monetary policy, reducing the base rate to 3.75% at the end of the year. This easing, coupled with inflation cooling toward the 2% target, catalysed a modest rebound in consumer activity. By January 2026, retail sales volumes rose by 1.8% - the largest monthly increase since mid-2024 - driven primarily by non-food sectors and a 14.7% increase in online spending (YoY). Despite the low take-up recorded earlier in 2025, the market entered 2026 with a stabilisation in vacancy rates, which fell to 13.5%.[1]

2.6 As of early 2026, the retail sector continues to show a mixed performance within the market. While prime high street locations and retail parks are experiencing yield compression and high demand for experiential space, secondary locations remain challenged by higher vacancy.[2] Operational costs have faced renewed upward pressure following the increase to the National Living Wage in April, which rose to £12.71 per hour (+4.1%). However, this has been partially offset by a resurgence in physical engagement, with footfall for March and early April 2026 increasing by 2.4% year-on-year, signalling a return to in-person retailing as consumers prioritise physical brand experiences over e-commerce transactions.[3]

2.7 Current market projections for 2026 indicate that retail is expected to outperform other traditional commercial sectors (e.g., office / industrial) with total returns forecasted at approximately 9.5%. This is underpinned by robust rental growth in prime pitches and a return of national vacancy rates to pre-pandemic levels (12.4%) by the end of the current year.[4]

Retail Take-up

2.8 Figure 2-1 shows the location of retail units which have let across the Borough since June 2024. In total, our search identified 16no. units amounting to c. 9,000 sqft of space.

Figure 2-1 – Retail Lease Locations

Source: CoStar, 2026.

2.9 The majority of retail lease transactions have been in and around Hastings town centre (70%), with a small cluster further north around Hollington. Table 2.1 summarises the transactions by unit size and average rent. Achieved rents were not available for all leased properties, therefore those properties have been excluded from the table below.

Table 2.1 – Retail Lease Take Up by Size

Size Range (sqft)	No. Units	Avg. Rent (psf)
0 – 499	2	£25.81
500 – 999	3	£16.76
1,000 – 1,999	1	£5.22
Total	**6**	**£17.85**

Source: CoStar, 2026.

2.10 Of the 16no. units that were leased, smaller units experienced the greatest level of take-up, with those of up to 1,000 sqft accounting for 88% of the sample. No units

larger than 2,000 sqft were let during the analysis period, with the largest transaction comprising a 1,724 sqft unit at Eversfield Place. It is also noted that only one of the premises was constructed after 2010, with all remaining units occupying buildings dating from the 1900s and therefore less likely to provide a modern, new-build specification. No new-build retail units were leased during the analysis period.

2.11 Achieved, effective and asking rents across the sample ranged from c.£5 psf to £30 psf, with an average of £17.86 psf. However, it should be noted that achieved rental information was not available for all leased units. The average rental level is marginally below the range of £19 psf to £21 psf adopted in our previous testing, although it is noted that the units identified were primarily comparison small town centre retail units.

2.12 In the sales market, we have identified 18no. transactions for retail spaces across the Borough, as shown in Figure 2-2.

Figure 2-2 –Retail Sales Transactions

Source: CoStar, 2026.

2.13 As with the leasing data, the majority of retail sales transactions occurred in the south of the borough, centred around Hastings town centre. The remaining transactions were distributed relatively evenly across the borough, with the exception of the east, where no sales activity was recorded during the analysis period. Table 2.2 shows the sales take up by unit size and average price. For units where the achieved sale price was not disclosed, these transactions have been excluded from the analysis in Table 2.2.

Table 2.2 – Retail Sales Transactions by Size

Size Range (sqft)	No. Units	Avg. £ / psf
0 – 499	4	£266.45

Size Range (sqft)	No. Units	Avg. £ / psf
500 – 999	1	£137.28
1,000 – 1,999	5	£114.25
2,000 – 2,999	3	£122.96
3,000+	1	£73.15
Total	**14**	**£158.31**

Source: CoStar, 2026.

2.14 The profile of units sold broadly mirrors the leasing evidence, with the highest proportion of transactions relating to smaller units. Approximately 76% of sales were for units of less than 2,000 sqft. The largest unit sold comprised 9,046 sqft and was located to the north of Hollington; however, the achieved sale price for this property was not available.

2.15 Only one unit was recorded as having been constructed after 2010, with the remainder occupying buildings dating from the 1900s.

2.16 The majority of purchases were for investment purposes, with less than one-third of transactions recorded as owner-occupier acquisitions.

2.17 The CoStar Retail Submarket Report indicates an average sale price of £128 psf for retail units transacted within the last 12 months.

2.18 Yields were recorded for three transactions, ranging from 8.94 – 10.00% (excluding multi-property or portfolio sales). To substantiate this, we have reviewed data from market reports and commentaries, as shown in Table 2.3.

Table 2.3 – Retail Yields

Source	Type	Yield
Knight Frank Prime Yield Guide – June 2026	High Street Retail, Prime Towns	6.25%
	High Street Retail, Good Secondary	10.00%
	Foodstores, Annual RPI Increases	4.75%
	Foodstores, Open Market Reviews	5.50% - 5.75%
Savills Market in Minutes: UK Commercial – May 2026	High Street Retail	6.50%
	Foodstores	5.50%
Cushman & Wakefield Marketbeat – March 2026	Prime Retail Centres	6.50%
	Secondary Retail Centres	10.0%
	Prime Supermarkets	4.65%

Sources: As above.

2.19 We would expect yields for retail space to sit between the prime and secondary rates. Overall, the information shows a slightly keener yield environment than our previous review of commercial market evidence (-25-50 bps).

Retail Availability

2.20 At the time of our search, we identified 15no. retail spaces listed as available to let, as shown in Figure 2-3.

Figure 2-3 – Retail Lease Availability

Source: CoStar, 2026.

2.21 The current lease availability shows a similar pattern to that demonstrated in the transactional data sample, with Hastings town centre being the primary location for retail uses across the borough. The units for lease in the smaller settlements in the west of the borough are expected to be served by local / village centres with self-sufficient retail provision. In total, over 33,000 sqft of space is available to let, with unit sizes ranging from c.415 – 12,000 sqft.

2.22 Table 2.4 shows the asking rents by unit size. Two of the units were listed as POA and have therefore been excluded from Table 2.4.

Table 2.4 – Retail Asking Rents

Size Range (sqft)	No. Units	Avg. £ / psf
0 – 499	4	£37.29

Size Range (sqft)	No. Units	Avg. £ / psf
500 – 999	4	£18.01
1,000 – 1,999	5	£20.53
Total	**13**	**£24.91**

Source: CoStar and Rightmove, 2026.

2.23 The CoStar Retail Submarket Report for Hastings indicates an average market asking rent of £23.20 psf for retail units over the past 12 months, with a reported vacancy rate of 1.3%. The average asking rent of £24.91 psf shown in Table 2.4 is broadly consistent with this evidence.

2.24 In the sales market, there were 2no. retail units listed as sold or under offer amounting to 18,000 sqft of space, as shown in Figure 2-4.

Figure 2-4 – Retail Sales Availability

Source: CoStar, 2026.

2.25 Unit sizes range from 193 – 17,4600 sqft, with listing prices between £62 - £829 psf. The average of £446 psf, which is higher than the average from the completed sales data sample. However, given the limited number of transactions available for analysis, this evidence is considered less representative of the wider Borough market.

2.26 To substantiate this data, we also looked at units listed for sale on Rightmove. At the time of our search, there were 2no. sales listings for retail units on Rightmove, as summarised below:

- White Rock, Hastings, East Sussex, TN34, - £51.12 psf

- Old London Road, Hastings, TN35 - £171.91 psf

2.27 Taking the Rightmove listings into consideration, the average asking price for the 4no. retail units listed for sale in the borough is £279 psf.

Retail Conclusion

2.28 Our review of the latest evidence suggests that the market rent has broadly remained unchanged since our previous assessment, though the yields have compressed slightly, reflecting stronger investor demand. We have therefore sought to adjust our previous assumptions to bring them in line with the latest information, as set out in Table 2.5.

2.29 We note that in forming our opinion of value, we have also considered the uplift which could be applied to the provision of new-build retail space, given that the majority of data obtained relates to retail spaces that were constructed before 2000.

Table 2.5 – Updated Retail Value Assumptions

Type	Rent (£ / psf)	Yield (%)
Convenience – Supermarket	£19.00	5.50%
Convenience – Express	£21.00	6.50%
Comparison – Small	£21.00	7.25%
Comparison – Large	£19.00	7.25%

Source: AVL, 2026.

3 Office

3.1 As with the retail market, this section considers the data available from June 2024 for office premises across Hastings Borough.

Market Overview

3.2 Take-up in the first half of 2024 was 45% greater than the equivalent period in 2023, resulting in pressure on existing supply levels. The development pipeline was limited, particularly across regional markets, resulting in rental growth for prime and Grade A space. Consumer preferences for quality over quantity remained dominant, with 70% of the total lease volume in 2023 comprising Grade A space. This sat above the average of 57% over the past five years.

3.3 Demand characteristics then shifted into 2025, with Q2 data showing an underperformance when compared to the same point in 2024, equating to a decrease of 60%. EG Radius reported a total of c.135m sqft of office space as being under construction through 2025, with the majority of schemes concerning refurbished units (39.7%), followed by change of use (26.7%). New build office development accounted for 24% of ongoing development schemes.

3.4 By the close of 2025, the national office market demonstrated significant resilience despite a backdrop of geopolitical volatility and inflationary pressures. While initial forecasts suggested a potential surplus of supply, the market instead faced a squeeze. Annual take-up across the Big Nine' regional markets reached approximately 7.6 million sqft, remaining in line with five-year averages. This resilience was underpinned by a continued pursuit of office quality, as occupiers increasingly viewed high-specification, ESG-compliant spaces to meet corporate net-zero mandates and attract talent in a competitive labour market.[5]

3.5 Contrary to earlier expectations of a new-build boom, the development pipeline for 2026 is dominated by refurbishments, which now account for 53% of all space under construction (up from 41% in 2025). Rising construction costs and the high cost of development finance have constrained speculative new-build starts, with the forecast for new deliveries over the next three years sitting at just 840,000 sqft per annum, well below the historic average of 2.5m sqft. This chronic undersupply of best-in-class new-build stock has led to a depletion of the unlet pipeline, with current under-construction supply across the UK estimated at only 1.3 years of typical take-up volume.[6]

3.6 The persistent demand-supply imbalance has driven record rental growth across key regional hubs. Looking into 2026, rental growth is forecast to continue at rates between 1.0% and 5.3% across most major cities. However, as core markets reach record-high rents, a secondary trend has emerged - larger corporate occupiers are beginning to target peripheral locations that offer high-quality refurbished stock at a lower cost-per-square-foot, effectively broadening the geography of rental growth beyond traditional city centres.[7]

3.7 Furthermore, the 2025 KPMG Global CEO Outlook reinforced the trajectory noted in 2024, with CEOs shifting focus toward AI integration and talent retention. As firms

[5] Avison Young, 2026, The Big Nine: Q4 2025 Office Review.
[6] CBRE, 2026, UK Real Estate Market Outlook 2026.
[7] Savills, 2026, Market in Minutes: UK Regional Office Investment Market Watch.

increasingly invest in AI-driven operations, requirements for office infrastructure are evolving. This technological shift, combined with a continued commitment to return-to-office strategies, is expected to sustain demand for prime workspace through to 2028, even as the market navigates a new regulatory landscape with environmental reporting and energy security.

Office Take-up

3.8 Our review of the office lettings market has identified 1no. transaction since June 2024, amounting to 1,165 sqft of space. The location of the unit is shown in Figure 3-1.

Figure 3-1 – Office Lease Locations

Source: CoStar, 2026.

3.9 The unit leased lies on Havelock Rock near Hastings town centre and achieved £11.85 psf. The unit appears to be in good condition, with refurbishment works seeming to have been undertaken within the last 10 years. The accommodation comprises a ground-floor office unit with a small meeting room and kitchenette and is situated within a building dating from before 1900.

3.10 There were no other retail leases recorded on CoStar during the sample period, suggesting that demand for office space across the Borough has been very limited. As such, we have also considered leasing activity in neighbouring markets. Only two lettings were identified for which achieved rental information was available. Both units are located within the same office building and are summarised in Table 3.1.

Table 3.1 – Office Lease Transactions from Neighbouring Authorities

Address	Sqft	Date Signed	Rent (psf)
Glovers Lane, TN39	1,916	Mar 2025	£18.50
Glovers Lane, TN39	632	Mar 2025	£18.50
		Average	**£18.50**

Source: CoStar, 2026

3.11 The units at Glovers Lane are situated within a relatively new development, completed in 2020, and are therefore more reflective of modern office rental levels. However, they are located within Bexhill Enterprise Park, which we would generally expect to command a premium relative to comparable units in Hastings. We would therefore currently expect the average rental value of new-build office accommodation in Hastings to fall within the range of the achieved rents of £11.85 psf to £18.50 psf.

3.12 In the sales market, 5no. offices have sold since June 2024, amounting to c.47,000 sqft of space. The locations are shown in Figure 3-2.

Figure 3-2 – Office Sales Transactions

Source: CoStar, 2026.

3.13 Sales of offices range from 1,550 – 24,516 sqft, with an average of 9,303 sqft. Achieved prices were recorded for only 3no. transactions, as set out in Table 3.2.

Table 3.2 – Office Sales Values

Address	Date Sold	Size (sqft)	Price (psf)
Havelock Road	May-26	24,515	£24.68
402 The Ridge	Dec-25	1,550	£189.03
22 Robertson Street	Jul-25	7,832	£137.90

Source: CoStar, 2026.

3.14 The average price psf across the data set is £117.20. Sale types were predominantly investment sales. None of the sales were for new-build units. CoStar Market Analytics observes a minor increase of £2 psf in the market sale price for office stock across Hastings during the past year, at £140 psf as of July 2026.

3.15 We note that the office block on Havelock Road was sold at auction at a level notably below our understanding of prevailing market values. Whilst the precise circumstances of the sale are unknown, an auction disposal may indicate a motivated vendor seeking a timely sale. The property was also vacant at the time of the transaction and is relatively large for the submarket, likely resulting in a smaller pool of purchasers and a longer letting or disposal period. These factors may have contributed to the lower sale price. Given that we deem it an outlier, after removing the unit at Havelock Road, the average price psf across the data set is £163.47.

3.16 One yield was recorded within the sample at 4.0%. As with the retail market review, we have benchmarked the data against market reports & yield guides, as shown in Table 3.3.

Table 3.3 – Office Yields

Source	Type	Yield
Knight Frank Prime Yield Guide – June 2026	Secondary, Regional Cities	11.00%
	South East Towns (10 yrs)	7.25%
	South East Towns (5 yrs)	8.25%
	Secondary, South-East Towns	11.50%
Savills Market in Minutes: UK Commercial – May 2026	South East Offices	7.50%
	Regional Offices	6.75%
Cushman & Wakefield Marketbeat – March 2026	Prime South East	8.00%
	Prime Regional	9.00%

Sources: As above.

3.17 We would expect yields for new-build office accommodation in Hastings to sit between those representative of south-eastern towns and secondary locations.

Office Availability

3.18 We identified a total of 4no. office premises available to let in July 2026, amounting to c. 2,100 sqft of space across the borough. The locations of the units available are shown in Figure 3-3.

Figure 3-3 – Office Lease Availability

Source: CoStar, 2026.

3.19 All units listed for lease are located in the vicinity of Hollington and around the Ponswood Industrial Estate, with no available stock identified within the town centre. To substantiate this evidence, we have also looked at listings on Rightmove. Table 3.4 shows the availability by size range and asking rent.

Table 3.4 – Office Lease Availability by Size

Size Range (sqft)	No. Units	Avg. Rent (psf)
0 – 499	3	£21.51
500 – 999	1	£11.04
1,000 – 1,999	1	£7.42
2,000 – 2,999	1	£7.03

Size Range (sqft)	No. Units	Avg. Rent (psf)
3,000+	1	£7.17
Total	**7**	**£13.89**

Source: Rightmove and CoStar, 2026.

3.20 Unit sizes range from 213 – 4,600 sqft, with c. 60% of the sample falling within the 0 – 999 sqft bracket. This suggests that a reasonable proportion of existing office stock across Hastings caters to smaller businesses and SMEs. Most spaces advertised as available are positioned away from Hastings town centre and closer to Hollington and Silverhill.

3.21 The average asking rent across the sample represents a minor reduction from the equivalent sample collected in our previous market review (£15.14 psf - 2025), which shows a lack of upward movement in the office market in the intervening period. This is consistent with wider observations in the regional and national office markets, particularly for smaller towns and secondary locations.

3.22 In terms of sales availability, 2no. office spaces were listed for sale on CoStar, as summarised below:

- 13 Warrior Square, TN37 (2,643 sqft): £227.02 psf
- 23 Havelock Road, TN34 (1,744 sqft): £126.15 psf

3.23 Due to the limited sales evidence available within Hastings, we have also reviewed sales availability in neighbouring submarkets, which are summarised below.

- Dittons Road, BN26 (2,442 sqft): £214.99 psf
- Dittons Road, BN26 (2,442 sqft): £196.56 psf
- 4 Athelstan Close, BN23 (2,500 sqft): £180.00 psf
- Chain Lane, TN33 (716 sqft): £230.38 psf
- 18 George Street, BN27 (3,492 sqft): £214.78 psf

3.24 As with the leasing data, the range in for sale prices doesn't indicate that capital values have changed significantly since our previous market research.

3.25 CoStar Analytics notes a lack of market activity within the Hastings office market over the past 12 months. The vacancy rate currently stands at 1.6%, which is above the trailing three-year average. Average market asking rents have decreased by 2.4%, while achieved rents have fallen by 3.1% over the past three years. This compares with a 2.7% decline in achieved rents across the wider East Sussex office market over the same period.

Office Conclusion

3.26 Our review has shown that the office market has not progressed significantly in the past 1-2 years. Based on the evidence identified, propose to test the following assumptions in Table 3.5

Table 3.5 – Office Value Assumptions

Type	Rent (£ / psf)	Yield (%)
Office – Small	£20.00	8.50%
Office – Large	£15.00	8.00%

Source: AVL, 2026.

4 Industrial

4.1 Lastly, this section considers the evidence arising from the industrial and light industrial markets across Hastings since June 2024.

Market Overview

4.2 In 2024, the industrial market experienced a notable increase in activity, with occupier take-up rising 20% year-on-year and investment volumes increasing by 29% compared with 2023. Despite stronger occupier and investment market performance, development activity remained subdued, with completed floorspace 40% lower than the previous year. The vacancy rate increased throughout 2024, rising from 5.5% at the end of 2023 to 7.3% by year-end. Rental growth also moderated, with average market rents increasing by 5.5% in 2024, compared with 7.6% in 2023. However, prime rents for units exceeding 50,000 sqft remained resilient, recording growth of 7.2% in 2024, only marginally below the 7.4% achieved in 2023.[8]

4.3 In 2025 the industrial market remained in a transitional phase. Savills reported that industrial units in core regional hubs experienced steady growth in 2025, driven by a shift in investor sentiment toward multi-let assets, which offered diversified income streams. Occupier demand had previously been more selective, but due to adjustments in national insurance and business rates, that position stabilised as occupiers accounted for these financial implications in their long-term occupational strategies.[9]

4.4 In their publication “UK industrial and logistics market outlook” (July 2025), Savills reported that take-up of existing units remained strong and ahead of pre-pandemic averages. Despite this, build-to-suit take-up was at its lowest since 2013. The report also stated that vacancy remained at its highest level since 2011, noting that investors and developers were cautious about progressing with capital-heavy new-build schemes or refurbishments.[10]

4.5 More locally, the South East industrial and logistics market remained resilient in 2025, with occupier take-up increasing to 7.1 million sqft, driven primarily by retailer demand and continued preference for high-quality Grade A space. While vacancy rose to 8.1% as new supply came to market and rental growth moderated, speculative development activity fell sharply, which is expected to help rebalance supply over the medium term.

4.6 In 2026 to date, the UK industrial market has remained active but momentum has moderated. Investment volumes appear lower than the levels recorded in late 2025, with investors adopting a more cautious approach amid geopolitical uncertainty and higher swap rates. Occupational demand has softened from the optimism seen at the start of the year, although enquiry levels remain above those of 2024 and 2025. Rental growth has continued, albeit at a slower pace, while development activity remains broadly stable. Overall, the market continues to perform resiliently, though sentiment has become more cautious and pricing is being scrutinised more closely.[11]

[11] Knight Frank, 2026. UK Logistics Market Dashboard, March 2026.

Industrial Take-up

4.7 Our review of industrial leasing activity has identified 1no. transaction across the borough since June 2024. The location of the unit is shown in Figure 4-1.

Figure 4-1 – Industrial Lease Transactions

Source: CoStar, 2026.

4.8 The location of industrial units within the borough differs, as expected, from that of retail and office premises, with units typically situated away from the town centre in less densely developed areas and existing business parks. The unit identified as being let, shown in Figure 4-1, was located on the northern boundary of the borough within the Ivyhouse Lane Industrial Estate.

4.9 The 2,995 sqft unit was built in 1970 and appears to be in dated condition. The rent of £6.01 psf is therefore considered to be lower than what could be achieved from the provision of new-build industrial space in Hastings.

4.10 Due to the lack of industrial take-up data, we have also reviewed lease evidence from neighbouring submarkets, a summary of which is provided in Table 4.1.

Table 4.1 – Industrial Lease Take Up in Neighbouring Markets

Address	Sqft	Date Signed	Rent (psf)
1B Learoyd Road, TN28	1,007	May 2026	£13.11
Rhee Wall, TN29	6,506	Apr 2026	£6.00
Rhee Wall, TN29	5,610	Apr 2026	£10.55
Browning Road, TN21	1,838	Oct 2025	£13.06

Address	Sqft	Date Signed	Rent (psf)
Straight Lane, TN29	5,355	Sep 2025	£4.67
Unit 12 Vinehall Road, TN32	4,000	Aug 2025	£6.00
Diplocks Way, BN27	1,899	May 2025	£7.37
Learoyd Road, TN28	15,109	May 2025	£6.35
Dittons Road, BN26	1,905	Jan 2025	£12.59
Vinehall Road, TN32	3,600	Jan 2025	£6.25
Learoyd Road, TN28	1,937	Dec 2024	£9.03
Camber Road, TN31	4,024	Nov 2024	£5.22
4 Birch Close, BN23	19,858	Nov 2024	£9.25
		Average	**£8.42**

Source: CoStar, 2026.

4.11 The industrial leasing sample indicates an achieved rental range of c.£4 psf to £13 psf. None of the units leased were new-build; the majority were constructed between 1900 to 2000 with less than 30% of the leased units having been built after 2000. Most of the units were in average or dated condition. Having regard to the premium that we would expect new-build units to command over second-hand units, the rental values are consistent with those identified in our previous update and do not indicate any notable change in market levels.

In terms of industrial sales activity, we identified 6no. transactions since June 2024, amounting to c.53,000 sqft. The locations are shown inFigure 4-2, with the size ranges and average sales prices in Table 4.2. We note that the achieved sale prices for two of the units were not publicly available and, therefore, have been excluded from Table 4.2.

Figure 4-2 – Industrial Sales Transactions

Source: CoStar, 2026.

Table 4.2 – Industrial Sales by Size

Size Range (sqft)	No. Units	Avg. £ / psf
0 – 2,999	1	£84.12
3,000 – 6,999	0	-
7,000 – 9,999	2	£67.14
10,000+	1	£62.65
Total	**4**	**£70.27**

Source: CoStar, 2026.

4.12 Achieved capital values from industrial unit sales range from £43- £92 psf, with an average of £70 psf. As with the lease transactions, this is consistent with those identified in our previous update and do not indicate any notable change in the market.

4.13 Only one of the industrial sales transactions had a corresponding yield, comprising a c.16,441 sq ft unit in St Leonards-on-Sea that transacted at a net initial yield of 8.26%. As with the previous market sectors, due to the lack of yield evidence, we have also considered yields published in guides and forecasts, as set out in Table 4.3.

Table 4.3 – Industrial Yields

Source	Type	Yield
Knight Frank Prime Yield Guide – June 2026	Warehouse & Industrial, Secondary Distribution	6.00 – 6.25%
	South East Estates (ex. London & Heathrow)	5.25%
Savills Market in Minutes: UK Commercial – May 2026	Industrial / Distribution	5.25%
	Industrial multi-lets	5.00%
Cushman & Wakefield Marketbeat – March 2026	Multi-let industrial, prime south-east	5.00%
	Distribution warehousing, medium income	5.50%
	Distribution warehousing, long income	5.00%

Sources: As referenced.

Industrial Availability

4.14 At the time of our assessment, 4no. industrial units were available to let, 3no. of which were located on the same industrial estate, totalling approximately 13,041 sqft. The locations of these units are shown in Figure 4-3.

Figure 4-3 – Industrial Lease Availability

Source: CoStar, 2026.

4.15 We summarise the unit sizes and asking prices below in Table 4.4. We note that one unit did not have a listed asking price and has therefore been excluded from Table 4.4.

Table 4.4 - Industrial Lease Availability by Size

Size Range	No. of Units	Average price (psf)
0 - 1,999	0	-
2,000 – 3,999	1	£12.00
4,000 – 6,000	2	£12.00
Total	**3**	**£12.00**

Source: CoStar, 2026.

4.16 Two of the units are located within the Ivyhouse Lane Industrial Estate and provide examples of asking rents for more recently-constructed industrial space from 2023 and 2024. This provides an insight into the rental expectations for modern industrial space which we'd expect to be more representative of the typicaly specifications of new-build stock. We also reviewed Rightmove and identified two units available to lease, which are summarised below in Table 4.5.

Table 4.5 – Industrial Lease Availability

Address	Sqft	Asking price (psf)
Drury Lane, TN38	9,761	£8.99
Haywood Way, TN35	4,000	£11.25

Source: Rightmove, 2026

4.17 Asking rents ranged from c.£9 psf to £12 psf. All of the available properties comprised second-hand units with no new-build units identified. The average asking rent across the sample was £11.25 psf, which is above the average achieved rent and is consistent with market expectations. The asking rents are broadly similar to those identified in our previous update, and there does not appear to have been any notable change in market rental levels since that time.

4.18 In the sales market, 1no. industrial space was listed as available – a 17,023 sqft unit advertised at an asking price equivalent to £57.28 psf. Given the lack of data, we also looked at sale availability in neighbouring markets, which we summarise below in Table 4.8.

Table 4.6 – Industrial Sales Availability in Neighbouring Markets

Address	Size (sqft)	Asking Price (psf)
2-3 Myrtle Road, BN22	1,580	£107.59
Courtlands Road, BN22	3,102	£109.61
Harbour Road, TN31	17,814	£123.50
Edison Road, BN23	3,379	£105.06
Edison Road, BN23	11,917	£62.94
11C Edison Road, BN23	3,293	£121.47
Old Swan Lane, BN27	677	£110.78
3-5 Lushington Lane, BN21	2,395	£202.51
176 Bexhill Road, TN38	17,023	£57.28
Diplocks Way, BN27	19,051	£110.23
55 Brampton Road, BN22	3,655	£150.48
Courtlands Road, BN22	3,379	£87.30
Diplocks Way, BN27	1,931	£150.18
Unit 4 Diplocks Way, BN27	6,263	£103.78
16A Maple Road, BN23	37,770	£12.31
1-16 Old Swan Lane, BN27	1,533	£88.06
	Average	**£106.44**

Source: CoStar, 2026

4.19 Current asking prices for industrial units listed for sale range from approximately £12 psf to £203 psf, with an average that is notably higher than the completed sales evidence. We note, however, that many of the available listings are located in Eastbourne, which we would generally expect to command a premium over Hastings on a like-for-like basis, reflecting its stronger connectivity.

4.20 We reviewed the CoStar Market Analytics report for the Hastings industrial submarket. However, market activity over the past 12 months was very limited, resulting in a relatively small evidence base from which the reported metrics were calculated. In several instances, averages and market indicators were based on only one or two data points, limiting their reliability for market-wide assumptions. Therefore, we also reviewed the East Sussex industrial market data, the relevant headline metrics of which are summarised below:

- Market Rent: £10.22 psf
- Market Value: £117 psf

4.21 The report indicated an average market yield of 8.9%; however, this figure was calculated from a single data point and, in our opinion, is therefore not representative of the wider market or sufficiently reliable to be relied upon as a general market benchmark.

Industrial Conclusion

4.22 Based on our review of the available evidence, we have not made any amendments to our market assumptions since our last market update. We summarise the value assumptions in Table 4.7.

Table 4.7 – Industrial Value Assumptions

Type	Rent (£ / psf)	Yield (%)
Industrial- Small	£13.50	7.50%
Industrial - Large	£11.00	7.25%

SENSITIVITY ANALYSIS

The following sensitivity tables show the balance of the appraisal (RLV-BLV £ per acre) for changes in appraisal input assumptions above.
Where the surplus is positive (green) the policy is viable. Where the surplus is negative (red) the policy is not viable.

SENSITIVITY ANALYSIS

The following sensitivity tables show the balance of the appraisal (RLV-BLV £ per acre) for changes in appraisal input assumptions above.
Where the surplus is positive (green) the policy is viable. Where the surplus is negative (red) the policy is not viable.

TABLE 1

SENSITIVITY ANALYSIS

The following sensitivity tables show the balance of the appraisal (RLV-BLV £ per acre) for changes in appraisal input assumptions above.
Where the surplus is positive (green) the policy is viable. Where the surplus is negative (red) the policy is not viable.

TABLE 1

SENSITIVITY ANALYSIS

The following sensitivity tables show the balance of the appraisal (RLV-BLV £ per acre) for changes in appraisal input assumptions above.
Where the surplus is positive (green) the policy is viable. Where the surplus is negative (red) the policy is not viable.

Notes/Comments:					

SENSITIVITY ANALYSIS

The following sensitivity tables show the balance of the appraisal (RLV-BLV £ per acre) for changes in appraisal input assumptions above.
Where the surplus is positive (green) the policy is viable. Where the surplus is negative (red) the policy is not viable.

TABLE 1

		Affordable Housing - % on site 40%

SENSITIVITY ANALYSIS

The following sensitivity tables show the balance of the appraisal (RLV-BLV £ per acre) for changes in appraisal input assumptions above.
Where the surplus is positive (green) the policy is viable. Where the surplus is negative (red) the policy is not viable.

TABLE 1

SENSITIVITY ANALYSIS

The following sensitivity tables show the balance of the appraisal (RLV-BLV £ per acre) for changes in appraisal input assumptions above.
Where the surplus is positive (green) the policy is viable. Where the surplus is negative (red) the policy is not viable.

TABLE 1

SENSITIVITY ANALYSIS

The following sensitivity tables show the balance of the appraisal (RLV-BLV £ per acre) for changes in appraisal input assumptions above.
Where the surplus is positive (green) the policy is viable. Where the surplus is negative (red) the policy is not viable.

TABLE 1

SENSITIVITY ANALYSIS

The following sensitivity tables show the balance of the appraisal (RLV-BLV £ per acre) for changes in appraisal input assumptions above.
Where the surplus is positive (green) the policy is viable. Where the surplus is negative (red) the policy is not viable.

TABLE 1

SENSITIVITY ANALYSIS

The following sensitivity tables show the balance of the appraisal (RLV-BLV £ per acre) for changes in appraisal input assumptions above.
Where the surplus is positive (green) the policy is viable. Where the surplus is negative (red) the policy is not viable.

SENSITIVITY ANALYSIS

The following sensitivity tables show the balance of the appraisal (RLV-BLV £ per acre) for changes in appraisal input assumptions above.
Where the surplus is positive (green) the policy is viable. Where the surplus is negative (red) the policy is not viable.

TABLE 1

SENSITIVITY ANALYSIS

The following sensitivity tables show the balance of the appraisal (RLV-BLV £ per acre) for changes in appraisal input assumptions above.
Where the surplus is positive (green) the policy is viable. Where the surplus is negative (red) the policy is not viable.

TABLE 1

SENSITIVITY ANALYSIS

The following sensitivity tables show the balance of the appraisal (RLV-BLV £ per acre) for changes in appraisal input assumptions above.
Where the surplus is positive (green) the policy is viable. Where the surplus is negative (red) the policy is not viable.

SENSITIVITY ANALYSIS

The following sensitivity tables show the balance of the appraisal (RLV-BLV £ per acre) for changes in appraisal input assumptions above.
Where the surplus is positive (green) the policy is viable. Where the surplus is negative (red) the policy is not viable.

TABLE 1

SENSITIVITY ANALYSIS

The following sensitivity tables show the balance of the appraisal (RLV-BLV £ per acre) for changes in appraisal input assumptions above.
Where the surplus is positive (green) the policy is viable. Where the surplus is negative (red) the policy is not viable.

TABLE 1

SENSITIVITY ANALYSIS

The following sensitivity tables show the balance of the appraisal (RLV-BLV £ per acre) for changes in appraisal input assumptions above.
Where the surplus is positive (green) the policy is viable. Where the surplus is negative (red) the policy is not viable.

TABLE 1

SENSITIVITY ANALYSIS

The following sensitivity tables show the balance of the appraisal (RLV-BLV £ per acre) for changes in appraisal input assumptions above.
Where the surplus is positive (green) the policy is viable. Where the surplus is negative (red) the policy is not viable.

SENSITIVITY ANALYSIS

The following sensitivity tables show the balance of the appraisal (RLV-BLV £ per acre) for changes in appraisal input assumptions above.
Where the surplus is positive (green) the policy is viable. Where the surplus is negative (red) the policy is not viable.

TABLE 1

SENSITIVITY ANALYSIS

The following sensitivity tables show the balance of the appraisal (RLV-BLV £ per acre) for changes in appraisal input assumptions above.
Where the surplus is positive (green) the policy is viable. Where the surplus is negative (red) the policy is not viable.

TABLE 1

SENSITIVITY ANALYSIS

The following sensitivity tables show the balance of the appraisal (RLV-BLV £ per acre) for changes in appraisal input assumptions above.
Where the surplus is positive (green) the policy is viable. Where the surplus is negative (red) the policy is not viable.

TABLE 1

SENSITIVITY ANALYSIS

The following sensitivity tables show the balance of the appraisal (RLV-BLV £ per acre) for changes in appraisal input assumptions above.
Where the surplus is positive (green) the policy is viable. Where the surplus is negative (red) the policy is not viable.

TABLE 1

SENSITIVITY ANALYSIS

The following sensitivity tables show the balance of the appraisal (RLV-BLV £ per acre) for changes in appraisal input assumptions above.
Where the surplus is positive (green) the policy is viable. Where the surplus is negative (red) the policy is not viable.

TABLE 1

SENSITIVITY ANALYSIS

The following sensitivity tables show the balance of the appraisal (RLV-BLV £ per acre) for changes in appraisal input assumptions above.
Where the surplus is positive (green) the policy is viable. Where the surplus is negative (red) the policy is not viable.

TABLE 1

SENSITIVITY ANALYSIS

The following sensitivity tables show the balance of the appraisal (RLV-BLV £ per acre) for changes in appraisal input assumptions above.
Where the surplus is positive (green) the policy is viable. Where the surplus is negative (red) the policy is not viable.

TABLE 1

SENSITIVITY ANALYSIS

The following sensitivity tables show the balance of the appraisal (RLV-BLV £ per acre) for changes in appraisal input assumptions above.
Where the surplus is positive (green) the policy is viable. Where the surplus is negative (red) the policy is not viable.

TABLE 1

SENSITIVITY ANALYSIS

The following sensitivity tables show the balance of the appraisal (RLV-BLV £ per acre) for changes in appraisal input assumptions above.
Where the surplus is positive (green) the policy is viable. Where the surplus is negative (red) the policy is not viable.

TABLE 1

SENSITIVITY ANALYSIS

The following sensitivity tables show the balance of the appraisal (RLV-BLV £ per acre) for changes in appraisal input assumptions above.
Where the surplus is positive (green) the policy is viable. Where the surplus is negative (red) the policy is not viable.

TABLE 1

SENSITIVITY ANALYSIS

The following sensitivity tables show the balance of the appraisal (RLV-BLV £ per acre) for changes in appraisal input assumptions above.
Where the surplus is positive (green) the policy is viable. Where the surplus is negative (red) the policy is not viable.

TABLE 1

SENSITIVITY ANALYSIS

The following sensitivity tables show the balance of the appraisal (RLV-BLV £ per acre) for changes in appraisal input assumptions above.
Where the surplus is positive (green) the policy is viable. Where the surplus is negative (red) the policy is not viable.

TABLE 1

SENSITIVITY ANALYSIS

The following sensitivity tables show the balance of the appraisal (RLV-BLV £ per acre) for changes in appraisal input assumptions above.
Where the surplus is positive (green) the policy is viable. Where the surplus is negative (red) the policy is not viable.

SENSITIVITY ANALYSIS

The following sensitivity tables show the balance of the appraisal (RLV-BLV £ per acre) for changes in appraisal input assumptions above.
Where the surplus is positive (green) the policy is viable. Where the surplus is negative (red) the policy is not viable.

TABLE 1

SENSITIVITY ANALYSIS

The following sensitivity tables show the balance of the appraisal (RLV-BLV £ per acre) for changes in appraisal input assumptions above.
Where the surplus is positive (green) the policy is viable. Where the surplus is negative (red) the policy is not viable.

SENSITIVITY ANALYSIS

The following sensitivity tables show the balance of the appraisal (RLV-BLV £ per acre) for changes in appraisal input assumptions above.
Where the surplus is positive (green) the policy is viable. Where the surplus is negative (red) the policy is not viable.

TABLE 1

SENSITIVITY ANALYSIS

The following sensitivity tables show the balance of the appraisal (RLV-BLV £ per acre) for changes in appraisal input assumptions above.
Where the surplus is positive (green) the policy is viable. Where the surplus is negative (red) the policy is not viable.

TABLE 1

SENSITIVITY ANALYSIS

The following sensitivity tables show the balance of the appraisal (RLV-BLV £ per acre) for changes in appraisal input assumptions above.
Where the surplus is positive (green) the policy is viable. Where the surplus is negative (red) the policy is not viable.

TABLE 1

SENSITIVITY ANALYSIS

The following sensitivity tables show the balance of the appraisal (RLV-BLV £ per acre) for changes in appraisal input assumptions above.
Where the surplus is positive (green) the policy is viable. Where the surplus is negative (red) the policy is not viable.

TABLE 1

SENSITIVITY ANALYSIS

The following sensitivity tables show the balance of the appraisal (RLV-BLV £ per acre) for changes in appraisal input assumptions above.
Where the surplus is positive (green) the policy is viable. Where the surplus is negative (red) the policy is not viable.

TABLE 1

SENSITIVITY ANALYSIS

The following sensitivity tables show the balance of the appraisal (RLV-BLV £ per acre) for changes in appraisal input assumptions above.
Where the surplus is positive (green) the policy is viable. Where the surplus is negative (red) the policy is not viable.

TABLE 1

SENSITIVITY ANALYSIS

The following sensitivity tables show the balance of the appraisal (RLV-BLV £ per acre) for changes in appraisal input assumptions above.
Where the surplus is positive (green) the policy is viable. Where the surplus is negative (red) the policy is not viable.

TABLE 1

SENSITIVITY ANALYSIS

The following sensitivity tables show the balance of the appraisal (RLV-BLV £ per acre) for changes in appraisal input assumptions above.
Where the surplus is positive (green) the policy is viable. Where the surplus is negative (red) the policy is not viable.

TABLE 1

SENSITIVITY ANALYSIS

The following sensitivity tables show the balance of the appraisal (RLV-BLV £ per acre) for changes in appraisal input assumptions above.
Where the surplus is positive (green) the policy is viable. Where the surplus is negative (red) the policy is not viable.

TABLE 1

SENSITIVITY ANALYSIS

The following sensitivity tables show the balance of the appraisal (RLV-BLV £ per acre) for changes in appraisal input assumptions above.
Where the surplus is positive (green) the policy is viable. Where the surplus is negative (red) the policy is not viable.

Notes/Comments:

SENSITIVITY ANALYSIS

The following sensitivity tables show the balance of the appraisal (RLV-BLV £ per acre) for changes in appraisal input assumptions above.
Where the surplus is positive (green) the policy is viable. Where the surplus is negative (red) the policy is not viable.

TABLE 1

SENSITIVITY ANALYSIS

The following sensitivity tables show the balance of the appraisal (RLV-BLV £ per acre) for changes in appraisal input assumptions above.
Where the surplus is positive (green) the policy is viable. Where the surplus is negative (red) the policy is not viable.

TABLE 1

SENSITIVITY ANALYSIS

The following sensitivity tables show the balance of the appraisal (RLV-BLV £ per acre) for changes in appraisal input assumptions above.
Where the surplus is positive (green) the policy is viable. Where the surplus is negative (red) the policy is not viable.

TABLE 1
